Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

General comments

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S39 Fenaughty Partnership - Riu Huna Farm	S39.003	General comments - consultation	Not Stated	Objects the lack of direct consultation with landowners and the community board and the short time frame for submissions.	Not stated.
S42 Maryanne Gill	S42.003	General comments - consultation	Oppose	Concerned with the communication to affected parties and considers there has been insufficient information regarding PC1.	Not stated.
S51 Mākara and Ohariu large farms	S51.002	General comments - consultation	Not Stated	Opposes PC1 on the basis of it having a broad regulatory approach and a lack of local consultation. Supports the improvement of water quality where it is shown to be poor and where solutions are within community control, provided that the necessary information is available. Seeks that GWRC collaborates with the local community rather than imposing regulations. Expressed concern with a lack of consultation and short timeframes to make submissions.	Not stated.
S57 Sally Kean	S57.005	General comments - consultation	Not Stated	Concerns the notification process was not suitable and believes a letter drop process should have been used. Believes the PC1 document is too lengthy to read and hard to understand.	Amend notification process to include a letter drop rather than solely newspaper advertisements (inferred).
S96 Urban Edge Planning Group on behalf of M & J Walsh Partnership Ltd	S96.001	General comments - consultation	Not Stated	Concern about lack of consultation with affected landowners/developers.	Not stated
S98 Urban Edge Planning	S98.003	General comments - consultation	Not Stated	Concerned about the apparent lack of engagement with landowners and	Not stated

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Group on behalf of Pandion Limited				developers about the intended approach to greenfield development.	
S114 Michael Marfell-Jones	S114.001	General comments - consultation	Oppose	Recommends withdrawal of PC1, due to concerns with lack of consultation with rural communities.	Withdraw PC1 in full
S115 Mary Hutchinson	S115.002	General comments - consultation	Support	Considers PC1 requires effective community engagement and expressed disappointment with GWRC, Wellington Water and WCC community engagement as part of a previous project submitter was involved in. Supports Eugene Doyle's view (another submitter) that processes supporting community groups' participation in council and associated agencies' work needs to be improved.	Not stated
S117 John Bowen	S117.003	General comments - consultation	Oppose	Considers that the consultation process was insufficient. States PC1 should have been emailed to property owners to provide them with sufficient time to review it. Property owners with farms in Makara should also have been notified of PC1 as they will be impacted.	Improve the consultation process with the community.
S118 Wayne Robert Pettersson and Maureen Pettersson	S118.002	General comments - consultation	Not Stated	Considers the consultation with affected parties regarding the plan change has been poor. Concerned the proposed plan is aimed at small block owners and there is no evidence or proof they are a problem.	Not stated.
S175 Tracy Simms	S175.001	General comments - consultation	Oppose	Concerns the consultation process has not included all affected properties.	Withdraw the Plan Change
S176 Te Awarua o Porirua Harbour and	S176.006	General comments - consultation	Amend	Supports inclusion of a method that provides for meaningful community engagement. Considers this would define requirements for structures and processes that enable communities to participate in	Include a method related to community engagement to ensure updates on progress of implementation are carried out - and actions are not deferred due to arguments of economic affordability or feasibility.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Catchments Community Trust & Guardians of Pāuatahanui Inlet				all issues in advocating for environmental guardianship.	
S178 Eugene Doyle	S178.004	General comments - consultation	Not Stated	Seeks structures and processes that support greater oversight of work undertaken by Councils and key agencies. Also seeks structures and processes that provide for community participation at all levels. References the global reference group set up as part of WWLs global stormwater consents as a good example of a process to promote community participation that GWRC should follow.	Not stated
S178 Eugene Doyle	S178.005	General comments - consultation	Not Stated	Recommends GWRC investment in a number of areas to ensure meaningful and effective community engagement. The areas include; digital platforms and other mechanisms for data sharing, increased funding for community/catchment monitoring programmes, financially supporting catchment communities and sufficient consultation on major resource consent approvals. Major resource consents should require data sharing in a form that the community can understand and that community panels be set up to participate in the monitoring of the effects of the activities	Not stated
S181 John Boyle	S181.003	General comments - consultation	Not Stated	Concerned with the lack of consultation and consideration for the UHCC Proposed Plan Change 50 Rural (PC50r) which PC1 is inconsistent with	Withdraw PC1 and conduct appropriate consultation and engagement.
S182 Susan Boyle	S182.003	General comments - consultation	Not Stated	Concerned that affected landowners have not been adequately consulted and that	Withdraw PC1 and conduct appropriate consultation and engagement.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				PC1 is inconsistent with UHCC Plan Change 50.	
S188 Wellington Fish and Game Regional Council	S188.004	General comments - consultation	Not Stated	Considers it important to include stakeholders like Wellington Fish and Game Council who have statutory responsibilities in consultation and management planning	Not stated
S188 Wellington Fish and Game Regional Council	S188.016	General comments - consultation	Not Stated	Concerned with a lack of consultation and questions if the NPSFM process has been followed correctly, particularly Section 3. 2 (b), which requires every regional council to engage with communities and tangata whenua to identify long-term visions, environmental outcomes, and other elements of the NOF.	Not stated
S188 Wellington Fish and Game Regional Council	S188.017	General comments - consultation	Not Stated	Concern that lack of communication with Wellington Fish and Game Council during PC1 development has led to omission acknowledging the requirement to protect habitat for trout and salmon insofar as this is consistent with protections of the habitats of indigenous freshwater species (Policies 10 and Policies 9 of the NPSFM). Also, Appendix 1B requires that where FMUs or parts thereof have fishing values, attributes associated with this fishing value (for both indigenous and introduced freshwater fish) need to be specifically targeted to allow the numbers of fish to be sufficient and suitable for human consumption. Concerned limited engagement with community and no engagement with submitter potentially circumvented important aspects of NPSFM and allows for Plan to continue to not fulfil national level legislative obligations for freshwater health in key areas.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S196 Sera Moran	S196.002	General comments - consultation	Oppose	Concerned the rural community only discovered PC1 by word of mouth .	Withdraw PC1.
S205 Kelly & Lewis Few-Mackay	S205.001	General comments - consultation	Oppose	Concerned there was no consultation with affected parties. Considers properties of 4-20 ha should have been contacted directly.	Withdraw PC1 and undertake effective consultation.
S208 Julie Martin	S208.002	General comments - consultation	Oppose	Concerned about the timing of consultation on PC1 at a busy and stressful time of the year given its length and complexity. Also concerned about a lack of direct consultation.	Extend public consultation
S219 Cuttriss Consultants Ltd	S219.004	General comments - consultation	Oppose	<p>Considers adequate consultation was not carried out with the development community and is concerned the draft version was not sent to the development community despite Subpart 1 of the NPS-FM requiring regional councils to engage with communities and tangata whenua.</p> <p>Considers that given the impact and extent of the proposed changes, the publication of a draft plan and consultation with the development community would minimise potential appeals and aid towards a more workable and functioning Natural Resources Plan.</p>	Withdraw PC1
S221 Generation Zero	S221.009	General comments - consultation	Not Stated	Suggests a collaborative approach with affected community members to promote social cohesion and minimise backlash to economic costs of improving infrastructure. Suggests simplified guides to RPS changes so submissions are accessible to the community.	Not stated
S224 Terawhiti Farming Co Ltd	S224.002	General comments - consultation	Oppose	<p>Concerned with a lack of consultation, content which is difficult for most people to understand, short timeframes to make submissions, and the submission timing just prior to Christmas.</p> <p>Notes opportunities that were missed that would have helped engagement,</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				including: a.Direct mail contact with rural property owners, identified through council's rating database. b.Formal engagement with our Community Board; and c.Provision of information on the GWRC website - more accessible written information, invitation to the PC1 rural webinars/meeting. Additional forms of communication are essential if GWRC really wants meaningful community feedback.	
S225 Upper Hutt City Council	S225.004	General comments - consultation	Not Stated	Not stated	Seek further work and consultation is undertaken in partnership with territorial authorities to accurately reflect roles and function in achieving outcomes and aspirations of Whaitua documents;
S229 Te Kamaru Station Ltd	S229.002	General comments - consultation	Oppose	Concerned with a lack of consultation, content which is difficult for most people to understand, short timeframes to make submissions, and the submission timing just prior to Christmas. Notes opportunities that were missed that would have helped engagement, including: a.Direct mail contact with rural property owners, identified through council's rating database. b.Formal engagement with our Community Board; and c.Provision of information on the GWRC website - more accessible written information, invitation to the PC1 rural webinars/meeting. Additional forms of communication are essential if GWRC really wants meaningful community feedback.	Not stated
S231 Te Marama Ltd	S231.003	General comments - consultation	Not Stated	Concerned about lack of consultation.	Seeks additional forms of consultation are implemented by GWRC.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S246 Water New Zealand	S246.016	General comments - consultation	Not Stated	Considers engagement is important for all stages of the water sector- from Te Mana o Te Wai practitioners, to treatment plant designers and operators, to on-site contractors managing sediment and erosion control conditions.	Engage further with utility operators as plan users to ensure what is proposed in the plans is workable.
S247 Carrus Corporation Ltd	S247.004	General comments - consultation	Oppose	<p>Considers adequate consultation was not carried out with the development community and is concerned the draft version was not sent to the development community despite Subpart 1 of the NPS-FM requiring regional councils to engage with communities and tangata whenua</p> <p>Considers that given the impact and extent of the proposed changes, the publication of a draft plan and consultation with the development community would minimise potential appeals and aid towards a more workable and functioning Natural Resources Plan.</p>	Withdraw PC1
S250 John and Jacqueline Diggins	S250.002	General comments - consultation	Oppose	Concerned about lack of consultation from GWRC and onerous set of requirements impacting rural land owners.	Withdraw PC1 and then engage with representative groups and wider public.
S252 Thames Pacific	S252.004	General comments - consultation	Oppose	<p>Considers adequate consultation was not carried out with the development community and is concerned the draft version was not sent to the development community despite Subpart 1 of the NPS-FM requiring regional councils to engage with communities and tangata whenua.</p> <p>Considers that given the impact and extent of the proposed changes, the publication of a draft plan and consultation with the development community would minimise potential appeals and aid towards a more workable and functioning Natural Resources Plan.</p>	Withdraw PC1

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S254 Best Farm Ltd	S254.001	General comments - consultation	Oppose	Considers there has been a lack of consultation on PC1. Considers little or no consideration has been given to the NPS-UD, and that there is a disconnect between the outcomes being sought by territorial authorities giving effect to the NPS-UD through urban area intensification and green field areas.	Not stated
S254 Best Farm Ltd	S254.002	General comments - consultation	Oppose	Considers there is little or no consideration given in the plan change to the NPS-Urban Development 2020 that has equal status in the RMA plan hierarchy.	Not stated
S255 Woodridge Holdings Ltd	S255.001	General comments - consultation	Oppose	Concerned with lack of consultation with key landowners and the development community during the preparation of PC1.	Withdraw PC1 and consult all relevant parties before releasing a replacement.
S273 Robert Pavis-Hall, Gaynor Rowswell, Katie Norman, Megan Norman	S273.001	General comments - consultation	Oppose	Concerned about the lack of communication and consultation around PC1.	Withdraw PC1.
S276 Jody Louise Sinclair, Joshua William Lowry, Anne Friedarika Sinclair & Tracey Lynn Browne	S276.001	General comments - consultation	Oppose	Concerned about the lack of consultation on PC1.	Withdraw PC1
S276 Jody Louise Sinclair,	S276.011	General comments - consultation	Oppose	Considers there is no quantification for the benefits or quantification of the costs and that just because GWRC consider they	Produce a thorough cost-benefit exercise and recognise ratepayers are not a limitless source of funds.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Joshua William Lowry, Anne Friedarika Sinclair & Tracey Lynn Browne				are obliged to do something is not a valid reason to have no idea of the value or cost of the exercise.	
S281 Kirsty Gill	S281.002	General comments - consultation	Oppose	Considers the community has received insufficient information about the plan. Considers that meetings and deadlines to lodge a submission have been unfair and difficult to meet.	Not Stated.
S287 M. Garcia	S287.001	General comments - consultation	Oppose	Considers that meaningful consultation on PC1 has not been undertaken	Withdraw PC1
S9 Louise Askin	S9.007	General comments - consultation	Amend	Concerned of PC1 public consultation process, with community awareness relying on local information channels and as PC1 will have significant implications for Wellington (particularly rural landowners), a higher level of community engagement is warranted.	Not Stated.
S14 Bede Crestani	S14.001	General comments - consultation	Amend	Submission period not long enough to provide response given the document size.	Not stated
S16 Pauatahanui Residents Association	S16.001	General comments - consultation	Not Stated	Considers not sufficient time or consultation with the community for landowners to consider the implications of the policies and rules.	Not stated
S30 Dean Spicer	S30.001	General comments - consultation	Not Stated	Considers GWRC failed to adequately consult affected landowners. Considers GWRC failed to consider proposed UHCC plan Change 50 rural 'PC50'.	Withdraw PC1 and conduct appropriate consultation and engagement.
S59 Upper Hutt Rural Community	S59.001	General comments - consultation	Not Stated	Concerned there was virtually no consultation completed on PC1 with those most affected. Notes the rural community	Withdraw PC1 and undertake further consultation

S288 China Forest Group Company New Zealand Ltd	S288.002	General comments - consultation	Not Stated	"Acknowledges the necessity of PC1 to respond to the requirements of the NPS-FW, and acknowledges the purpose of the whaitua committees to resolve issues before plans or rules were made. However, notes there was only one identifiable party with forestry expertise in Te Awarua-o-Porirua Whaitua until 2018, and no such expertise within Te Whaitua te Whanganui-a-Tara. Concerned further engagement with affected sectors was not undertaken between completion of action plans and publishing of PC1, noting a divergence between PC1 rules to achieve freshwater objectives and the whaitua committees' recommendations. Notes replanting on nominated high risk land is not included as a non-complying use, but is intended to be rectified by way of submissions by GWRC. Considers it inappropriate to insert rules that have not been included in public documentation. Considers it is bad faith to notify significant changes from the NRP with limited time to make submissions. Considers forestry, and sectors that may	Not stated

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				potentially be significantly adversely affected, have been under-represented in development of the PC1 outcomes. Considers direct engagement with the sector should have been undertaken to understand the implications and practicality of the rules. No concerns raised by the submitter with the recommendations of the whaitua committees, noting the expectations of those recommendations that the sector and GWRC would work within the existing framework to achieve water quality objectives. Considers the outcomes are materially different, and notes the timeframe for the submission process limited for the required research and engagement needed. Concerned submissions are used to rectify oversights not included in PC1. "	
S3 Dougal Morrison	S3.002	General comments - current legislation	Not Stated	Considers any reference to NES' for Plantation Forestry should be removed and replaced with NES' for Commercial Forestry (NES-CF).	Not stated.
S3 Dougal Morrison	S3.003	General comments - current legislation	Not Stated	Considers the NES-CF should be allowed to bed in before significant changes are made to the NRP	Not stated.
S3 Dougal Morrison	S3.014	General comments - current legislation	Not Stated	References Section 5 and Section 85 of the RMA. Concerned the proposed plan will make it impossible for forestry owners to provide for their economic well-being or to make reasonable use of their land. Concerned that forestry owners will not be able to generate income post-harvest but costs, such as rates or maintenance costs for fences will continue. Concerned that forests will not be able to be harvested due to the conditions in the rules.	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Considers it is unlikely that the maximum sediment level of 100 gr/m ³ will be able to be met. Considers that additional costs for planning, documentation, experts and consent fees may make it impossible to economically harvest a forest.	
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.002	General comments - current legislation	Not Stated	Notes the new government has announced intentions to review the NPS-FM and related legislation and the plan change needs to maintain consistency with revised objectives.	Not stated
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.008	General comments - current legislation	Not Stated	Notes a new version of the NES-CF is in force and has stronger environmental controls.	Not stated
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.010	General comments - current legislation	Not Stated	Considers GW should allow the new NES-CF to bed in and actively monitor compliance and land performance (commission research) and withdraw the prohibition on harvest in the meantime. Failing this, the submitter considers GW should exempt forestry under 20ha as a Controlled Activity.	Withdraw the prohibition on harvest. Should the above relief not be granted, exempt forestry under 20ha as a controlled activity.
S36 Wellington Branch of New Zealand Farm Forestry	S36.013	General comments - current legislation	Not Stated	Considers the regulations in the NES-CF are sufficient to minimise negative environmental effects of plantation forestry on water bodies, noting the NES-CF has sound scientific backing. Considers conditions that are more stringent than the NES-CF should be based on compelling evidence about the	Not stated

Stop PC1 process until the policy direction is known.
S177 Transpower New Zealand Limited	S177.001	General comments - current legislation	Not Stated	<p>Notes PC1 should give effect to the NPS-FM whilst also giving effect to all other national policy statements including the NPSET and NESETA but the s32 report does not reference the NPSET and NESETA and appears that they have not been considered in the PC1 preparation.</p> <p>Seeks to ensure the objective of the NPSET is given effect to through provisions of PC1 while also giving effect to the NPS-FM.</p>	Ensure the objective of the NPSET is given effect to through provisions of PC1 while also giving effect to the NPS-FM.
S191 Juken New Zealand	S191.003	General comments - current legislation	Not Stated	<p>Notes the NES-PF and NES-CF are part of the government's suite of regulations that help meet the objectives of the NPS-FM. Is unaware of any evidence that the NES-PF is not meeting the intended outcomes for the Wellington Region and sees no reason why the NES-CF would not continue to do so.</p> <p>Refers to regulation 6 of the NES-CF which allows for a council to provide more stringent rules to meet an objective giving effect to the NPS-FM but notes there is a process to be undertaken by the council to justify any application of stringency, and refers to Section 32 (4) of the RMA. Considers proving a link between a proposed rule and a plan objective that gives effect to the NPS-FM is not sufficient to meet Regulation 6(1)(a). Considers the Section 32 report: Part A - Background and Context (para 88) does</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				not provide any evidence that the enforcing of more stringent rules will deliver better outcomes than the NES-CF. Notes that neither of the two Whaitua committees recommended that the NES - PF was insufficient to meet fresh water targets.	
S195 New Zealand Farm Forestry Association (NZFFA)	S195.004	General comments - current legislation	Not Stated Oppose	Delete merged with above	Not stated
S214 Megan Persico	S214.002	General comments - current legislation	Not Stated	Considers PC1 should be put on hold due to signalled repeal of NPS-FM from the new government.	Put PC1 on hold.
S225 Upper Hutt City Council	S225.002	General comments - current legislation	Not Stated	Not stated	That GWRC undertakes a full legal and natural justice review of the provisions in light of the evolving national direction;
S225 Upper Hutt City Council	S225.003	General comments - current legislation	Not Stated	Not stated	Amend to remove actions that conflict with or are more onerous than the 2023 National led government direction included in the Incoming Government Coalition agreements, November 2023 and letter from Chris Bishop dated 13 December 2023 which identifies changes to RMA, NPSFM, NESFW and NPS-IB prior to end of 2023.
S225 Upper Hutt City Council	S225.006	General comments - current legislation	Amend	Not stated	Amend to correctly implement national planning standards;
S225 Upper Hutt City Council	S225.007	General comments - current legislation	Amend	Not stated	Delete or significantly amend provisions which have a lack of higher order document direction or evidentiary support;
S225 Upper Hutt City Council	S225.008	General comments - current legislation	Amend	Not stated	Delete or significantly amend provisions which lack of any consideration of scale and significance and apply to all development without appropriate thresholds;

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S236 Parkvale Road Limited	S236.002	General comments - current legislation	Oppose	Considers approach by PC1 contrary to directive of NPS-UD	Not stated
S236 Parkvale Road Limited	S236.004	General comments - current legislation	Oppose	Concerns PC1 gives effect to NPS-FM which if removed, will be out of step with higher order policy direction. Considers this should give Council pause for thought in progressing with PC1.	Not stated
S237 John Turkington Limited	S237.002	General comments - current legislation	Not Stated	Concerned lack of evidence and justification for forestry restrictions and how NES-CF controls are insufficient for managing forestry and associated effects.	Not stated
S237 John Turkington Limited	S237.003	General comments - current legislation	Not Stated	Considers PC1 duplicated existing controls under NES-CF including use of erosion mapping and management plan requirements.	Not stated
S237 John Turkington Limited	S237.005	General comments - current legislation	Not Stated	Promotes the correct application of stringency under the NES-CF for specific additional controls to the existing NES-CF framework to address water quality concerns, as the preferred approach and an alternative to the PC1 consented regime proposed.	Not stated
S237 John Turkington Limited	S237.010	General comments - current legislation	Not Stated	Notes PC1 must be implemented in accordance with statutory provisions. Notes National Environmental Standards take primacy over Plan rules unless the standards expressly provide otherwise, and PC1 should complement existing NES-CF framework and only introduce more stringent rules where necessary to achieve an objective developed to give effect to NPS-FM. Concerned current provisions seek to replace the current permitted activity approach of National Instruments leading to regulatory inconsistency. Notes whilst regulation 6 of NES-CF allows for a council to provide more stringent rules to meet an objective giving	Not stated

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>effect to NPS-FM, there is a process to be undertaken by council to justify any application of stringency, refers to Section 32 (4) of RMA.</p> <p>Submitter considers none of the proposed changes necessary, or validly justified. Considers Council has not undertaken any of its own research into how NES-CF provisions have been operating and has failed to provide evidence to support these proposed changes, including evidence to show current regulatory regime is not sufficient to achieve a plan objective. Suggests proposed or amended policies, objectives or rules of PC1 as they relate to commercial forestry are not necessary or appropriately justified in accordance with the statutory provisions of Section 32(4) of RMA that apply to this type of plan change.</p>	
S237 John Turkington Limited	S237.011	General comments - current legislation	Not Stated	<p>Considers NES-CF sufficient for managing forestry activities and notes Council have not provided any evidence contrary to this.</p> <p>Seeks Council should provide evidence that NES-CF is insufficient to meet the objectives for water quality, ecosystem health and mana whenua values in these FMUs before looking to pursue this plan change process further.</p> <p>Alternatively, seeks Council utilise stringency ability under NES-CF to develop more stringent rules for specific controls, noting Council must provide evidence to show the NES-CF controls are not sufficient to achieve a specific plan objective to give effect to NPS-FM in order to apply a more stringent rule.</p>	<p>Seeks Council provide evidence that NES-CF is insufficient to meet the objectives for water quality, ecosystem health and mana whenua values before progressing with PC1.</p> <p>Alternatively, Seeks Council should utilise stringency ability under NES-CF to develop more stringent rules for specific controls.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S243 Land Matters Limited	S243.034	General comments - current legislation	Oppose	Notes the agreements of the government coalition to remove/replace legislation and suggest withdrawal of PC1 to allow a comprehensive review of PC1 provisions as they relate to national guidance.	Withdrawal of PC1 to allow for a comprehensive review of provisions of plan change as they relate to national guidance.
S246 Water New Zealand	S246.007	General comments - current legislation	Not Stated	Notes NRP must also be consistent with the Water Services Entities Act 2022 (section 253) provisions for a transport corridor manager that owns or operates a transport stormwater system.	Not stated
S246 Water New Zealand	S246.012	General comments - current legislation	Not Stated	The Water Services Act 2021 introduces new mandatory requirements to monitor and report on the environmental performance of drinking water, wastewater and stormwater networks and their operators. Environmental limits and targets that affect three waters infrastructure need to align with the environmental performance measures, targets and standards set by Taumata Arowai in accordance with the Water Services Act 2021, specifically the Network Environmental Performance Measures. Taumata Arowai are currently drafting standards and consent conditions for wastewater networks, overflows and treatment plants and intend to introduce wastewater and stormwater measures at a future date. GWRC should consult with them on any proposed measures, for example the requirements in Schedule 32: Wastewater Improvement Strategy, to ensure consistency in requirements.	GWRC consult with Taumata Arowai on any proposed measures, for example the requirements in Schedule 32: Wastewater Improvement Strategy, to ensure consistency in requirements.
S246 Water New Zealand	S246.013	General comments - current legislation	Not Stated	Notes inconsistencies in the requirements and the consent and compliance process across consent authorities creates inefficiencies, increases the regulatory burden for designers, technology providers and service providers.	Reduce inconsistencies to avoid situations where applicants receive substantially different requests for information, or even different decisions, when making applications for the same type of system.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S246 Water New Zealand	S246.014	General comments - current legislation	Not Stated	Notes Regional councils will remain responsible for regulation, compliance, and enforcement of fresh, waste and storm water quality and natural hazards policy and planning under new regulatory tools from new economic and quality water regulators.	Council must enforce rules and plans in place and proposed - this includes, but not limited to, wastewater treatment plant consenting, sediment and erosion control, and land-use planning restrictions on high-risk susceptible land.
S249 Isabella Cawthorn	S249.009	General comments - current legislation	Not Stated	<p>Considers any duplication between the statutory requirements, plans, policies and processes of the Water Services Entities Act 2022 and requirements of the RMA, Spatial Planning Act, Natural Built Environments Act (including regional councils' freshwater plans) should be avoided.</p> <p>Considers There's a similar potential for duplication between the requirement for asset management plans (AMPs),.</p> <p>Suggests if AMPs are not doing this job, they should be rewritten so they're strategically tied to manifesting the objectives of the relevant FMU or pFMU.</p>	Avoid duplication of legislation
S250 John and Jacqueline Diggins	S250.004	General comments - current legislation	Oppose	<p>Suggests GWRC is contravening the Bill of Rights and there is erosion of property rights.</p> <p>Concerned PC1 is proposing sanctions against property owners on factors they have no control over.</p> <p>Suggests within any given catchment there will be upstream and downstream properties and very few indicative monitoring sites. Concerned properties will be assessed based on downstream results from a single monitoring point and penalised accordingly.</p>	Remove all clauses in PC1 where GWRC has failed to establish an adequate network of monitoring sites.

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S287 M. Garcia	S287.002	General comments - current legislation	Oppose	Questions the legality of the process undertaken by GWRC, citing recent Environment Court decisions.	Remove clauses that are demonstrably regulating by fiat. Demonstrate respect for the rule of law.
S287 M. Garcia	S287.003	General comments - current legislation	Oppose	Considers in any given catchment there will be upstream and downstream properties and very few indicative monitoring sites. Notes that the Mangaroa catchment and Akatarawa Valley are complex networks of waterways and all properties in the catchment will be assessed, based on the downstream results from this single monitoring point and penalised accordingly. Considers this unacceptable.	Remove all clauses where GWRC has failed to establish an adequate network of monitoring sites.
S287 M. Garcia	S287.004	General comments - current legislation	Oppose	Considers GWRC has decided that Freshwater Management is pre-eminent and over-rules other National Policy Statements. Considers GW has erroneously decided to regard clauses (a), (b) and (c) of the Te Mana o te Wai hierarchy as mutually exclusive rather than regarding them as equally weighted and inter-dependent. Considers that GWRC has chosen to give maximum weight to one piece of legislation and has exacerbated that choice by taking in to account an opinion by one Whaitua in respect of levels of copper and zinc in stormwater which are not recognised in NPS-FM.	Give equal weighting to all government legislation and disregard regulation by committee.
S287 M. Garcia	S287.005	General comments - current legislation	Oppose	Considers there is confusion among GWRC staff and that contradictory advice has been given relating to the immediate legal effect of provisions and the fencing of waterways.	Delete the statement that all rules have immediate legal effect and substitute "all rules in this plan change will be held in abeyance pending the plan change passing through all stages required by the RMA."
S288 China Forest Group Company	S288.018	General comments - current legislation	Not Stated	Concerned about the reliance on Regulation 6 of the NES-PF (now NES-CF) to enable rules which require consenting for forestry activities and abandonment of a portion of productive	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
New Zealand Ltd				<p>estate without demonstrating the need for this stringency in PC1.</p> <p>Considers GWRC's water quality data is insufficient and does not support the stringency upon forestry it seeks to apply. With respect to forestry activities, considers there is insufficient evidence to support the objectives and attribute limits sought. Notes some monitoring sites are already meeting attribute targets, and where not, the relative role of forestry activity is small.</p> <p>Considers drivers for poor quality likely arise from the extended proximity of reaches to agricultural activity, major highways and urban and semi-rural development.</p> <p>Notes it is unclear how an "equitable" share based on area aligns with an effects-based response to partitioning sediment budget against land uses.</p> <p>Considers the proposed rules are unjustified due to well-established knowledge that production forests are likely to produce more sediment during harvest than pastoral agriculture on the same landform but return to near natural baselines shortly thereafter; and nationwide consistency of trends across land use of declining water quality across most attributes from native forest, exotic forest, pastoral agriculture, cropping and urban.</p> <p>Considers increased sediment yield relative to pastoral land use is offset by decades of below average yield, and that effects are a permanent day-to-day</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>feature on pastoral sites.</p> <p>Concerned a justifiable, quantifiable link between the action and the water quality response has not been provided for blanket rules to retire an allocated portion of private forestry land use. Considers that at the time of the deliberations of the whaitua committees, any effects on water in the whaitua that could have been attributed to forestry activity were a cumulative summation of previous years of activity predating the NES-PF/CF. Disagrees that the NES-PF/CF allows activities as permitted and does not enable control over operations, noting several mechanisms for control under the NES-PF/CF. Considers the recommendations of the whaitua committee should be reflected, and effort devoted towards understanding industry practice guides, working with the sector, and focusing on education, awareness, monitoring, compliance and engagement. Notes similar methods are normalised in response to issues around pastoral agriculture (via farm plans), but not for forestry.</p>	
S288 China Forest Group Company New Zealand Ltd	S288.019	General comments - current legislation	Not Stated	<p>Concerned the section 32 report does not adequately demonstrate the need for the stringency proposed in PC1.</p> <p>Submitter references parts of the section 32 analysis which they disagree with.</p> <p>Notes the s32 analysis states forestry is a major land use in the two whaitua at 13.5% and 8% respectively and considers these figures unhelpful in isolation from other uses of land, noting it is also stated that the area has recently reached or is</p>	Not stated

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>been previously developed for urban land uses"</p> <p>Views this definition as similar to the Auckland Unitary Plan definition for greenfield.</p> <p>To support the proposed definition, the submitter requests the term "urban development" also be defined. Suggests the definition of "urban development" from the Regional Policy Statement would be appropriate and support integration between the RPS and the NRP.</p>	
S2 Horokiwi Quarries Ltd	S2.002	General comments - definitions	Amend	Not stated	<p>Insert new definition of "quarrying activities" as follows: Has the same meaning as in the National Planning Standards (as set out below): means the extraction, processing (including crushing, screening, washing, and blending), transport, storage, sale and recycling of aggregates (clay, silt, rock, sand), the deposition of overburden material, rehabilitation, landscaping and cleanfilling of the quarry, and the use of land and accessory buildings for offices, workshops and car parking areas associated with the operation of the quarry.</p>
S2 Horokiwi Quarries Ltd	S2.003	General comments - definitions	Amend	<p>The submitter states whilst the Natural Resources Plan defines "biodiversity offset," which relates primarily to indigenous biodiversity, and "offset" which is a more general definition, there is no definition for "aquatic offset" in PC1.</p> <p>Concerned that without a specific definition for aquatic offset, there is a risk the definition for biodiversity offset may be inappropriately applied. Considers it would be inconsistent with the NPS-FM to omit a definition defined within it.</p>	<p>Insert new definition of "aquatic offset" as follows: Aquatic offset Has the same meaning as in the National Policy Statement for Freshwater Management (as set out below): means a measurable conservation outcome resulting from actions that are intended to: (b) redress any more than minor residual adverse effects on a wetland or river after all appropriate avoidance, minimisation, and remediation, measures have been sequentially applied; and (c) achieve no net loss, and preferably a net gain, in the extent and values of the wetland or river, where:</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Submitter understands that consequential amendments may be required to objectives, policies, and rules to reference this term.	(i) no net loss means that the measurable positive effects of actions match any loss of extent or values over space and time, taking into account the type and location of the wetland or river; and (ii) net gain means that the measurable positive effects of actions exceed the point of no net loss
S2 Horokiwi Quarries Ltd	S2.004	General comments - definitions	Amend	<p>The submitter states whilst the NRP defines "biodiversity compensation," which relates primarily to indigenous biodiversity, there is no definition for "aquatic compensation".</p> <p>Concerned that without a specific definition for aquatic compensation, there is a risk the definition for biodiversity compensation will be inappropriately applied.</p> <p>Considers it would be inconsistent with the NPS-FM to omit a definition defined within it.</p> <p>Submitter understands that consequential amendments may be required to objectives, policies, and rules to reference this term.</p>	<p>Insert new definition of "Biodiversity compensation" as follows:</p> <p>Biodiversity compensation Biodiversity compensation means a measurable positive environmental outcome resulting from actions that are designed to compensate for residual adverse biodiversity effects. The principles to be applied when proposing and considering biodiversity compensation are provided in Schedule G3 (biodiversity compensation).</p>
S94 Jo McCready	S94.008	General comments - definitions	Amend	Notes within the document there are a number of references to small rivers, less than 1 metre wide. Notes there is nowhere within the documents that states what the minimum size is and considers it unacceptable to have an open-ended definition for a minimum.	Amend: Clarify the definition upon which other regulations rely eg. Stock exclusion and fencing rules.
S116 Taumata Arowai	S116.001	General comments - definitions	Amend	Notes differing terminology used by different groups in different regions makes national comparison of environmental performance difficult. Notes the National	Requests that terminology (existing terms not proposed to be amended in PC1, including bore, community drinking water supply, drain, greywater, group drinking water supply, health needs of people,

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Planning Standards establish definitions local authorities must use, and that other wastewater, stormwater and drinking water terminology (including bore, community drinking water supply, drain, greywater, group drinking water supply, health needs of people, sludge, wastewater, wastewater network, water sensitive urban design) in the NRP have not been amended through PC1 to align with the Planning Standards. Supports amendments to these terms.	sludge, wastewater, wastewater network, water sensitive urban design) is aligned with that used in the NPS, WSA, and that being developed by Taumata Arowai, as possible and appropriate.
S116 Taumata Arowai	S116.002	General comments - definitions	Amend	Notes the WSA framework for identification, monitoring, and management of risks to water sources is intended to work together with resource management legislation. Notes changes are made to rules that recognise proximity to source water intakes but that no change has been made to the reference to drinking water supplies (community drinking water supply and group drinking water supply) and these references are out of date due to the repeal of the Health (Drinking Water Amendment Act) 2007 and enactment of the WSA.	Amend definitions of community drinking water supply and group drinking water supply as appropriate to reflect legislative changes to what constitutes a drinking water supply.
S120 Akatarawa Valley Residents - John Van Nortwick & Jill Van Nortwick John & Jill Van Nortwick	S120.004	General comments - definitions	Oppose	Considers a definition is needed for "river" and there is a need to define how a 1m water course is measured. S151 Wellington Water Ltd	S151.012	General comments - definitions	Amend	<p>Generally supports the new definitions in PC1, and refinements have been sought for specific definitions. Specifically notes support for the intent of the following definitions:</p> <p>'Existing wastewater discharge' - it is important that this definition facilitates integrated management of the wastewater network (and discharges from it), but avoids a fragmented approach where additional consents need to be sought. The definition needs to remain broad enough to include new discharge locations created as part of improvement works or instances where an uncontrolled overflow point is replaced with a new constructed overflow point.</p> <p>'Containment standard' - the definition is consistent with the approach adopted in the submitter's wet weather overflow applications. Achievement of containment standards should be assessed by reference to average annual weather conditions (as simulated by a computer model) rather than by reference to the actual number of wet weather overflow events in a given year.</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S151 Wellington Water Ltd	S151.180	General comments - definitions	Amend	Notes the term "point source discharges" is used in a number of provisions that will continue to apply within the two whitua, and seeks confirmation that wastewater and stormwater discharges are not intended to fall within this definition.	Define "point source discharge" so that it clearly excludes discharges from wastewater and stormwater networks. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151 Wellington Water Ltd	S151.181	General comments - definitions	Amend	Suggests it may be necessary to revisit the existing definition of 'new wastewater discharge' as it will apply differently within the two whitua given the different definition of 'existing wastewater discharge' that will apply within those areas.	Any amendments as necessary to reflect the corresponding definition of 'existing wastewater discharge', including as it may be modified through the plan change process. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151 Wellington Water Ltd	S151.182	General comments - definitions	Amend	Submitter has opposed wording to require reductions in contaminants 'commensurate with what is required in the receiving environment' to meet TAS. If relief is not accepted submitter seeks that "commensurate" is defined in PC1.	Add new definition as follows: Commensurate in the context of reductions in contaminants in wastewater or stormwater discharges, means a level of reduction that is both proportionate to the effect of the discharge on the receiving environment, and reasonably within the control of the applicant. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S152 Akatarawa Valley Residents - John Raffan & Heather Raffan	S152.004	General comments - definitions	Oppose	Considers a definition is needed for "river" and there is a need to define how a 1m water course is measured.	Define important terms to address lack of clear definition and prevent uncertainty and inconsistency. Include picture references to inform what a "river" is.
S153 Akatarawa Valley Residents - Redington Family Trust	S153.004	General comments - definitions	Oppose	Considers a definition is needed for "river" and there is a need to define how a 1m water course is measured.	Define important terms to address lack of clear definition and prevent uncertainty and inconsistency. Include picture references to inform what a "river" is.

S177 Transpower New Zealand Limited	S177.004	General comments - definitions	Not Stated	Notes significant changes to Policy 7 of the RPS through Proposed Change 1 as recommended through the S42A officer right of reply.	Redevelopment of existing or the creation of new impervious surfaces at high-risk industrial or trade premises should be a permitted or controlled activity, subject to appropriate conditions.
S177 Transpower New Zealand Limited	S177.006	General comments - definitions	Not Stated	<p>Concerns the vegetation clearance provisions on 'high erosion risk land' do not recognise need to undertake vegetation clearance to prevent encroachment of woody vegetation on National Grid transmission lines and support structures.</p> <p>Submitter is not opposed to revegetation generally, but considers revegetation should not be promoted underneath or near to National Grid transmission lines and support structures, as this may compromise future safe operation of the National Grid.</p> <p>Questions appropriateness of mapping used to identify where resource consent is required for vegetation clearance. Notes mapping includes small and incohesive areas of vegetation, and questions efficiency or effectiveness of regulating these. Considers maps should be amended to only identify cohesive areas of vegetation being subject to rules. Seeks specific reference to NESETA at</p>	<p>Amend maps to only identify cohesive areas of vegetation being subject to rules.</p> <p>Include specific reference to NESETA at start of chapter to highlight NESETA regulations to plan users.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				start of chapter to highlight NESETA regulations to plan users.	
S195 New Zealand Farm Forestry Association (NZFFA)	S195.024	General comments - definitions	Not Stated	PC1 uses the term 'plantation forestry' but it does not define it. Similarly it does not define 'harvesting.' There are alternatives to clear-felling, such as small coupe harvesting and continuous cover harvesting, which have little impact on either biodiversity or water quality. PC1 refers to an 'FMU,' yet this is only defined in the Section 32 report.	Define plantation forestry in accordance with NES-CF Define harvesting and exclude continuous cover and small coupe harvesting Define FMU
S205 Kelly & Lewis Few-Mackay	S205.003	General comments - definitions	Amend	Notes there are a number of references to small rivers, less than 1 metre wide but concerned there is a open-definition for the minimum small river size.	Amend: Clarify definitions which influence other regulations.
S206 Winstone Aggregates	S206.003	General comments - definitions	Amend	Suggests the provision of a definition for "quarrying activities", derived from the NZ Planning Standards.	Insert new definition of "quarrying activities" as follows: Quarrying activities Has the same meaning as in the National Planning Standards (as set out below): means the extraction, processing (including crushing, screening, washing, and blending), transport, storage, sale and recycling of aggregates (clay, silt, rock, sand), the deposition of overburden material, rehabilitation, landscaping and cleanfilling of the quarry, and the use of land and accessory buildings for offices, workshops and car parking areas associated with the operation of the quarry.
S206 Winstone Aggregates	S206.004	General comments - definitions	Amend	Seeks the provision of a definition for "significant mineral resources", derived from the operative RPS. Notes Method 52 of the operative RPS, which requires significant mineral resources to be spatially identified. Seeks for this to be undertaken concurrently with PC1 and for the definition to reference the associated mapping.	Insert new definition of "significant mineral resources" as follows: Significant mineral resources Has the same meaning as in the Wellington Regional Policy Statement (as set out below): Deposits of minerals, the extraction of which is of potential importance in order to meet the current or future mineral needs of the region or nation.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S206 Winstone Aggregates	S206.005	General comments - definitions	Amend	Seeks the provision of a definition for "quarry", derived from the NZ Planning Standards.	Include definition of "quarry": Quarry Has the same meaning as in the National Planning Standards (as set out below): means a location or area used for the permanent removal and extraction of aggregates (clay, silt, rock or sand). It includes the area of aggregate resource and surrounding land associated with the operation of a quarry and which is used for quarrying activities.
S206 Winstone Aggregates	S206.006	General comments - definitions	Amend	Notes there is no definition for "aquatic offset", though notes the NRP currently has definitions for "biodiversity offset" and "offset". Concerned that "biodiversity offset" may be inappropriately applied without a definition for "aquatic offset". Notes the NPS-FM includes a definition for "aquatic offset", and that it would be inconsistent with the NPS-FM to omit the definition from PC1. Seeks for the NPS-FM definition to be inserted, noting that further amendments to provisions may be required to reference the term.	Insert new definition of "aquatic offset" as follows: Aquatic offset Has the same meaning as in the National Policy Statement for Freshwater Management (as set out below): means a measurable conservation outcome resulting from actions that are intended to: (b) redress any more than minor residual adverse effects on a wetland or river after all appropriate avoidance, minimisation, and remediation, measures have been sequentially applied; and (c) achieve no net loss, and preferably a net gain, in the extent and values of the wetland or river, where: (i) no net loss means that the measurable positive effects of actions match any loss of extent or values over space and time, taking into account the type and location of the wetland or river; and (ii) net gain means that the measurable positive effects of actions exceed the point of no net loss
S206 Winstone Aggregates	S206.007	General comments - definitions	Amend	Notes there is no definition for "aquatic compensation", though notes the NRP currently has a definition for "biodiversity compensation". Concerned that "biodiversity compensation" may be inappropriately applied without a definition for "aquatic compensation". Notes the NPS-FM includes a definition for "aquatic	Insert new definition of "aquatic compensation" as follows: Aquatic compensation Has the same meaning as in the National Policy Statement for Freshwater Management (as set out below): means a conservation outcome resulting from actions that are intended to compensate for any

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

				compensation", and that it would be inconsistent with the NPS-FM to omit the definition from PC1. Seeks for the NPS-FM definition to be inserted, noting that further amendments to provisions may be required to reference the term	more than minor residual adverse effects on a wetland or river after all appropriate avoidance, minimisation, remediation, and aquatic offset measures have been sequentially applied
S206 Winstone Aggregates	S206.016	General comments - definitions	Not Stated Amend	Considers the definition for "high risk industrial or trade premises" would include quarrying activities, despite not resulting in discharges of hazardous substances, and therefore subject to Rules WH.R4, WH.R11 and WH.R12. Considers the inclusion of quarrying activities in these rules unreasonable, and would add onerous consenting requirements for low risk activities. Notes examples of small scale activities that would require resource consent despite all stormwater being captured and treated within the site.	Provision of a specific rule framework for quarrying activities, similar to the approach taken for ports and airports, wherein restricted discretionary activity status applies for most discharges anticipated from an operational quarry. Rules to be linked to the TAS for the related Whaitua. Where a discharge would result in TAS not met for the part of the FMU, activity status to fall to non-complying.
S207 Firth Industries Limited	S207.001	General comments - definitions	Amend	Concern with no definition for 'aquatic offset'. NRP defines 'biodiversity offset' and also defines 'offset'. Without an 'aquatic offset' definition, there is a risk the 'biodiversity offset' definition is inappropriately applied when considering 'offsetting' for an activity with more than minor effects on fresh water. Omitting the definition is inconsistent with the NPSFM (which has a definition). Understand that consequential amendments may be required to objectives, policies, and rules to reference this term.	<p>Insert new definition of "aquatic offset" as follows:Aquatic offset</p> <p>Has the same meaning as in the National Policy Statement for Freshwater Management (as set out below):</p> <p>means a measurable conservation outcome resulting from actions that are intended to:</p> <p>(a) redress any more than minor residual adverse effects on a wetland or river after all appropriate avoidance, minimisation, and remediation, measures have been sequentially applied; and</p> <p>(b) achieve no net loss, and preferably a net gain, in the extent and values of the wetland or river, where:</p> <p>(i) no net loss means that the measurable positive effects of actions match any loss of extent or values over space and time, taking into account the type and location of the wetland or river; and</p>

					(ii) net gain means that the measurable positive effects of actions exceed the point of no net loss
S207 Firth Industries Limited	S207.002	General comments - definitions	Amend	Concern with no definition for 'aquatic compensation'. NRP defines 'biodiversity compensation'. Without an 'aquatic compensation' definition, there is a risk the 'biodiversity compensation' definition is inappropriately applied when considering offsetting for an activity with more than minor effects on fresh water. Omitting the definition is inconsistent with the NPSFM (which has a definition). Understand that consequential amendments may be required to objectives, policies, and rules to reference this term.	Insert new definition of "aquatic compensation" as follows: Aquatic compensation Has the same meaning as in the National Policy Statement for Freshwater Management (as set out below): means a conservation outcome resulting from actions that are intended to compensate for any more than minor residual adverse effects on a wetland or river after all appropriate avoidance, minimisation, remediation, and aquatic offset measures have been sequentially applied
S219 Cuttriss Consultants Ltd	S219.001	General comments - definitions	Not Stated	Considers that without a definition, there may be uncertainty about what constitutes a greenfield development in comparison to an infill/brownfield development. Considers a definition of 'greenfield' development will assist in providing certainty regarding the application of new rules. Considers the proposed definition of 'greenfield' development aligns with the definition of an urban environmental allotment under section 76(4C) of the RMA. Suggests this definition will not hinder the ability of large lots to accommodate the establishment of up to 2 dwellings, which is permitted by most District Plans in the region.	Amend as follows: Add definition of greenfield development: Greenfield Development: The use of land that is predominately vacant with a site area of 4,000m² or greater, where the proposal will result in the development of 3 or more lots or dwellings for residential purposes regardless of staging.
S220 Rosco Ice Cream Ltd	S220.001	General comments - definitions	Not Stated	Requests a definition of "greenfield development" is included. Presumably a greenfield development is	Include a definition of "greenfield development"

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				the development of an existing grassed property (mapped as 'planned/existing urban area') with no existing impervious surfaces, where the development also includes provision of new roads to be vested and new sewage and stormwater infrastructure to be vested.	
S225 Upper Hutt City Council	S225.019	General comments - definitions	Amend	Not stated	Amend proposed definition of a 'drain' that would result in all drains being considered 'modified streams';
S230 Mary Beth Taylor	S230.002	General comments - definitions	Amend	Considers GW should push for a better and more clear definition for 'Peatlands' under the RMA to work toward their protection and restoration. Considers the RAMSAR Convention should ideally be applied to the Mangaroa Peatland.	Not stated
S238 Greater Wellington Regional Council	S238.001	General comments - definitions	Amend	Notes the NES-PF has been replaced by the NES-CF. Amend in PC1 provisions to replace NES-PF with NES-CF.	plantation- commercial forestry / plantation commercial forestry
S238 Greater Wellington Regional Council	S238.002	General comments - definitions	Amend	Suggest a new definition of "urban zone" to support the definition of unplanned greenfield development.	Include new definition as follows: Urban zones are the following zones as set out in the National Planning standards: <ul style="list-style-type: none"> • Residential zones (large lot residential, low density residential, general residential, medium density residential, high density residential) • Commercial and mixed-use zones (neighbourhood centre, local centre, commercial, large format retail, mixed use, town centre, metropolitan centre, city centre) • Industrial zones (light industrial, general industrial, heavy industrial) • Special purpose zones unless it can be demonstrated that the special purpose zone is a rural zone.
S238 Greater Wellington	S238.003	General comments - definitions	Amend	Amend to update PC1 to NES-CF that replaced NES-PF after PC1 was notified	Insert new definition as follows: Commercial forestry has the same meaning as given in section 3 of the Resource Management (National

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Regional Council					Environmental Standards for Commercial Forestry) Regulations 2017
S239 Orogen Limited	S239.002	General comments - definitions	Not Stated	Seeks the addition for a definition for "greenfield development", particularly for the application of Rules WH.R6 and P.R6	Add definition of 'greenfield development' to Chapter 2.2.
S240 Porirua City Council	S240.001	General comments - definitions	Not Stated	Considers a definition of 'urban environment' is required in place of 'urbanised area' in various proposed provisions to provide greater regulatory certainty.	Insert definition for Urban Environment: Has the same meaning as given in section 1.4 of the National Policy Statement for Urban Development 2020.
S241 Pukerua Property Group Ltd	S241.006	General comments - definitions	Not Stated	Notes confusion in document as to what types of development the plan change relates to. Considers it should not relate to Rural Lifestyle or Rural development.	Withdraw PC1. If PC1 not withdrawn, there is a need to define "Greenfield Development" in the Plan Change to avoid confusion.
S243 Land Matters Limited	S243.001	General comments - definitions	Amend	Questions what types of development PC1 relates to. Considers Rural Lifestyle or Rural development should be excluded.	Provide definition of "Greenfield Development" definition
S246 Water New Zealand	S246.003	General comments - definitions	Amend	Notes the term [community] drinking water is used extensively through PC1 but the definitions do not include drinking water, or drinking water source.	Include definitions for [community] drinking water and drinking water
S246 Water New Zealand	S246.017	General comments - definitions	Not Stated	Supports inclusion of terms of terms such as containment standard, core allocation, hydrological control, impervious surfaces, stormwater catchment, stormwater treatment system, wastewater network catchment and wet weather overflows.	Not stated
S247 Carrus Corporation Ltd	S247.001	General comments - definitions	Amend	<p>Considers without a definition, there may be uncertainty about what constitutes a greenfield development in comparison to an infill/brownfield development.</p> <p>Considers a definition of 'greenfield' development will assist in providing certainty regarding the application of new rules.</p> <p>Considers the proposed definition of 'greenfield' development aligns with the definition of an urban environmental</p>	<p>Amend as follows: Add definition of greenfield development: Greenfield Development: The use of land that is predominately vacant with a site area of 4,000m² or greater, where the proposal will result in the development of 3 or more lots or dwellings for residential purposes regardless of staging.</p>

				allotment under section 76(4C) of the RMA. Suggests this definition will not hinder the ability of large lots to accommodate the establishment of up to 2 dwellings, which is permitted by most District Plans in the region.	
S248 Ara Poutama Aotearoa the Department of Corrections	S248.007	General comments - definitions	Not Stated	Provide definitions for "raingarden" and "bioretention device".	Include definitions for terms including "raingarden" and "bioretention device".
S252 Thames Pacific	S252.001	General comments - definitions	Amend	<p>Considers without a definition, there may be uncertainty about what constitutes a greenfield development in comparison to an infill/brownfield development.</p> <p>Considers a definition of 'greenfield' development would assist in providing certainty regarding the application of new rules.</p> <p>Considers the proposed definition of 'greenfield' development aligns with the definition of an urban environmental allotment under section 76(4C) of the RMA. Suggests this definition will not hinder the ability of large lots to accommodate the establishment of up to 2 dwellings, which is permitted by most District Plans in the region.</p>	Add definition of greenfield development: Greenfield Development: The use of land that is predominately vacant with a site area of 4,000m² or greater, where the proposal will result in the development of 3 of more lots or dwellings for residential purposes regardless of staging.
S257 Kāinga Ora	S257.001	General comments - definitions	Amend	Notes provisions and rule framework refer to "greenfield development" but there is no corresponding definition.	Introduce new definition for Greenfield Development.
S261 Forest & Bird	S261.001	General comments - definitions	Not Stated	Considers amendments are required for some definitions which set out limits or define key terms inappropriately. Notes	Amend definitions which cross-reference to other legislation to the actual text for those definitions.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				many definitions cross-reference to definitions in other legislation, and seeks that the text is set out instead for ease of use.	
S263 New Zealand Carbon Farming Group ("NZCF")	S263.003	General comments - definitions	Oppose	<p>Notes 'Production forestry' is defined in NRP with reference to the NES-PF meaning permanent forests, such as commercial forests for carbon sequestration purposes, are not managed by provisions of PC1.</p> <p>Notes Section 32 Report includes the following statement suggesting the scope of PC1 expands as the NES-CF is addressed through submissions and decision-making: "In these FMUs, plantation forest management is currently only subject to the regulations of the NES-PF, that came into force on 1 May 2018. From 03 November 2023, the NES-PF will be replaced by the Resource Management (National Environmental Standards for Commercial Forestry) Regulations 2023 (NES-CF). The NES-CF extends the NES-PF to cover carbon forests as well as plantation forests, so the Plan Change 1 provisions applying to forestry are expected to remain appropriate with respect to the NES-CF, with some amendments to terminology. As the NES-CF will not be in effect at the date of notification of Plan Change 1, any amendments will be managed through the submissions and decision-making process."</p> <p>Considers that whilst submission and decision-making processes can address alignment of PC1 provisions with the NESCF, submissions and decision-</p>	<p>1. That the provisions of the Proposed Plan Change that regulate commercial forestry, including those provisions that are intended to prevail over the NESPF, are withdrawn (or the Proposed Plan Change is not included in the NRP) until such time as:</p> <ul style="list-style-type: none"> - the efficiency and effectiveness of the NESCF has been monitored and the results of such monitoring support the need for provisions in the NRP that prevail over the NESCF; - the scope of the Proposed Plan Change clarified, including in respect of permanent forests, or commercial forests planted for carbon sequestration purposes; - decisions on submissions on Proposed Change 1 to the WRPS have been made; - the recommendations in the Te Whaitua te Whanganui-a-Tara Implementation Programme 2021 accurately and appropriately reflected in Proposed Plan Change provisions; - a fulsome evaluation of the provisions is undertaken in a manner consistent with section 32 of the RMA, with the outcome of that evaluation confirming the necessity of the Proposed Plan Change; and an evaluation is completed under section 32(4) of the RMA, that explicitly evaluates the relevant provisions of the Proposed Plan Change relative to the NESPF, with the outcome of that evaluation confirming the necessity of provisions that prevail over the NESPF. <p>2. Should the relevant provisions of the Proposed Plan Change not be withdrawn (or the Proposed Plan Change is included in the NRP), NZCF seeks that the Proposed Plan Change is amended to make all required changes, including the specific amendments set out in Table at Appendix A. It is noted that the relief in Appendix A is only sought</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				making cannot be used to expand scope of PC1 to also address 'carbon forests'. Considers management of discharges from 'carbon forests', or 'carbon forests' more generally, is outside the scope of PC1.	should NZCF's primary relief (being the withdrawal of the Proposed Plan Change or the Proposed Plan Change not being include in the NRP) not be accepted. 3. Such further, alternative or consequential relief as may be necessary to fully give effect to this submission. 4. Consistent with the Implementation Plans' recommendations, NZCF is available and willing to work collaboratively with GWRC, including through the sharing of information in respect of commercial forestry and the implementation of the NESCF, to further develop practice and any necessary regulatory intervention to address the adverse effects of discharges from commercial forestry activities on water quality.
S275 The New Zealand Transport Agency	S275.002	General comments - definitions	Amend	Seeks that 'new state highways' is defined. Provides a suggested definition but is open to alternative wording, considers it must make clear that the definition only relates to 'new' state highways and not alterations to existing ones.	Define new state highways as: a new road operated by NZ Transport Agency. This excludes any upgrades or alterations to an existing state highway. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275 The New Zealand Transport Agency	S275.005	General comments - definitions	Amend	Notes the definition of 'property' would include the entire state highway as a single property and subsequently rule P.R22(c) would apply the earthworks limitations (3000m ² over 12 months) to the entire state highway network. Notes other examples include WH.P14(a)(i) and P.R17.	Delete the reference to 'property' relative to all state highways. Replace it with reference to 'project' or similar. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S282 Pat van Berkel	S282.006	General comments - definitions	Amend	No definition for 'primary contact'.	Add 'primary contact' definition
S286 Taranaki Whānui	S286.001	General comments - definitions	Amend	Considers consequential changes may be required to provide for the relief sought by Taranaki Whānui for other provisions.	Amend definitions as necessary to provide for the relief sought by submitter.
S286 Taranaki Whānui	S286.002	General comments - definitions	Not Stated	Seeks a definition of papakāinga is required as consequential amendment to provide for relief sought in relation to enabling papakāinga activities.	Add definition for Papakāinga: Any activity undertaken in the traditional rohe of tangata whenua to sustain themselves, which is on land held under Te Ture Whenua Māori Act 1993, or

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					on land where there is an ancestral connection to the land and the land will remain in Māori ownership in the long term. Papakāinga includes residential activities and commercial activities that provide employment and / or income to support those living in the papakāinga as well as (but not be limited to): social, cultural, economic, conservation and recreation activities, marae, wāhi tapu and urupā.
S101 Wellington International Airport Limited	S101.006	General comments - earthworks	Oppose	<p>Considers regular maintenance and repair of the roads, runways, taxiways and aprons at the Airport to ensure their safety and functionality is maintained should be excluded from the proposed new earthworks provisions. Considers that in the absence of this change, the submitter will be subject to an inefficient and unnecessary consenting burden for activities that form part of its ongoing operational requirements.</p> <p>Opposes the winter shutdown provisions as it fails to provide a consenting pathway for large scale infrastructure projects that often span months to years in duration and will add significant cost and time to infrastructure projects undertaken by WIAL and likely other infrastructure providers, and will constrain infrastructure providers ability to meet the ongoing needs of the community. Considers the approach fails to recognise that some earthworks activities must avoid certain breeding, spawning or nesting periods if significant indigenous fauna are located on site.</p>	Not stated
S151 Wellington Water Ltd	S151.005	General comments - earthworks	Oppose	Considers the winter shutdown for earthworks will make delivery of any large-scale programme of work impracticable.	Seeks an exemption for regionally significant infrastructure from the winter shutdown for earthworks

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S165 PUKERUA HOLDINGS LIMITED	S165.004	General comments - earthworks	Oppose	<p>Opposes the non-complying resource consent requirement for winter earthworks and instead seeks the existing approach to managing winter earthworks be retained because it has proven effective. Considers it is inappropriate to applying a blanket non-complying activity status for winter works, instead assessing the project's pre-winter track record and factors such as scale, nature, duration of the works and management of works already undertaken in the applicable site. Concerns the requirement to stabilise earthworks against erosion and implement sediment controls before shutting down may not be feasible, potentially leading to unintended environmental consequences. Concerned a blanket shutdown period may not align with the diverse challenges of different sites and areas. Considers if an applicant demonstrates the ability to manage winter works effectively, such instances should be supported to prevent unnecessary delays in housing supply and delivery</p>	<p>The Submitter seeks the following amendments to PC1:</p> <ol style="list-style-type: none"> 1. Withdrawal of PC1 in its entirety to allow for a more comprehensive review of the policy and rule framework as it relates to freshwater management (including stormwater management and earthworks); OR 2. Should the relief sought in point 1) not occur, the Submitter seeks the relief set in relation to specific provisions of PC1 as set out in Section 3 of the original submission; AND 3. Any other relief (including consequential relief) to give effect to the decisions sought in relation to specific provisions of PC1 as set out in Section 3 of the original submission.
S169 KORU HOMES NZ LIMITED	S169.049	General comments - earthworks	Not Stated	<p>Opposes requirement for a non-complying resource consent to undertake winter earthworks.</p> <p>Considers large rain events at any time cause larger pulses of sediment than discharges of sediment over the winter period and the current practice for managing winter earthworks with GWRC oversight is sufficient. Considers this existing practice should be retained where it is managed through a separate approvals process against established GWRC criteria.</p> <p>Considers the non-complying activity</p>	<p>Withdrawal of PC1 in its entirety to allow for a more comprehensive review of the policy and rule framework as it relates to freshwater management (including stormwater management and earthworks);</p> <p>OR</p> <ol style="list-style-type: none"> 2. Should the relief sought in point 1) not occur, the Submitter seeks the relief set out in submission; AND 3. Any other relief (including consequential relief) to give effect to the decisions sought in submission;

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>status doesn't consider scale, nature or duration of the works or specific site conditions. Concerned that stabilising earthworks before the shutdown period may not always be feasible and may result in other perverse environmental outcomes. Considers blanket restrictions are not the most effective approach to address diverse challenges on different sites and areas</p> <p>Considers where applicants demonstrate that winter works can be managed, this should be supported to avoid unnecessary delay of housing supply</p>	
S177 Transpower New Zealand Limited	S177.005	General comments - earthworks	Not Stated	<p>Notes the NESETA does not regulate earthworks subject to a regional rule and therefore the earthworks rules apply to National Grid activities.</p> <p>Considers the earthworks policies and rules in PC1 do not provide for a reasonable level of earthworks with no permitted activity standards for earthworks at any scale.</p> <p>Submitter notes above notified rule framework is an error which has been corrected by GWRC under clause 16 Schedule 1 to RMA as a memo on December 6th 2023. Submitter notes their submission is made on PC1 as notified with legal effect of provisions.</p> <p>Considers it inefficient for almost all earthworks to require resource consent as this will create an administrative burden with little clear environmental benefits and adverse effects can be managed through permitted activity conditions. Opposes the blanket shutdown of earthworks between June-October as instances may occur where this is unavoidable and can be carefully managed mitigate adverse</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				effects on stability and run-off. Notes the GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021) provides a pathway for earthworks to be undertaken in winter months and is referred to in the earthwork provisions. Concerns the activity status pathway for earthworks insufficient to facilitate upgrading or development of the National Grid, consistent with NPSET. Concerns of uncertainty as to whether consents will be granted under s104D of the RMA, even when effects triggers can be sufficiently mitigated through consent conditions.	
S193 Wairarapa Federated Farmers	S193.008	General comments - earthworks	Oppose	<p>Considers the operative NRP earthworks and vegetation clearance rules should remain so the changes are given time to take effect. Considers the rules were a significant shift on the previous plan and it is too soon to unravel the positions discussed and agreed upon through Environment Court-assisted mediation.</p> <p>Opposes removing the permitted and controlled activity rules (Rule R102 and Rule R103) for the construction of new farm tracks. Questions why Rules R102 and R103 have been removed as the conditions for both rules were prescriptive in terms of managing environmental effects. Concerned farm track works that cannot meet the proposed permitted activity rule will now require consent for a restricted discretionary or non-complying activity.</p> <p>Notes earthworks in winter, unless anticipated in a certified farm environment plan (FEP), now require consent for a non-complying activity irrespective of whether the effects of the earthworks can</p>	Seeks to have Rules R102 and R103 reinstated. Make any consequential amendment(s) necessary to give effect to the relief sought.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>be managed to meet the discharge standards. Concerned to see the implementation of a 'blanket ban' on earthworks for four months of the year as it reduces a farmer's ability to manage and operate their business without additional cost and administrative burden and respond to events in a timely manner. Notes Farmers need the flexibility to be able to restore access if tracks are washed out without having to wait for resource consent to be granted.</p> <p>Opposes the earthworks and vegetation clearance policies and rules in the proposed NRP and seeks relief that the policies and rules in the operative NRP remain.</p>	
S206 Winstone Aggregates	S206.017	General comments - earthworks	Not Stated Oppose	<p>Considers earthworks (excluding earthworks on a farm) will be at least a restricted discretionary activity, regardless of scale or adverse effect. Notes the conjunctive requirement was not intended for all clauses. Seeks an urgent variation is issued to correct the permitted rule. Notwithstanding this correction, opposes the rule framework and associated policy direction that restricts earthworks over winter months, as it does not account for long-term ongoing permanent earthwork activities that occur year-round, such as quarrying activities. Considers insufficient justification is provided in the s32 evaluation for the shut down period, including an assessment of costs and benefits, or direct and indirect effects to quarrying activities. Considers restrictions will increase cost and length of construction periods, and will impact supply of aggregate. Disagrees with the assumption that increased sediment</p>	<p>Remove the shutdown period over winter months. Amend non-complying activity status to discretionary.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				discharges are more likely during winter months, noting that unpredictable rainfall events can occur at any time of year, which will increase with climate change. Further notes that receiving environments are less vulnerable during winter months as water temperatures are lower and flows are higher. Considers non-complying activity status for earthworks not meeting restricted discretionary conditions is onerous, noting that replacement earthworks consents for an operational quarry would be subject to the rule. Considers this does not recognise the importance of local source aggregate and is contrary to the Regional Policy direction. Notes that where non-complying activity status is in practical terms no different than discretionary activity status, then the less onerous activity status is the most appropriate.	
S225 Upper Hutt City Council	S225.016	General comments - earthworks	Amend	Considers this removal will result in significant issues for territorial authorities and landowners carrying out everyday activities, with no scale included in any provisions and no rules addressing this issue.	Amend and reintroduce exclusions for "repair, sealing or resealing of a road, footpath, driveway" from definition of earthworks.
S246 Water New Zealand	S246.010	General comments - earthworks	Support	Supports the Earthworks rules in both Whaitua chapters.	Not stated
S248 Ara Poutama Aotearoa the Departmen t of Corrections	S248.003	General comments - earthworks	Oppose	Considers the proposed earthworks policies and rules do not provide for a reasonable level of earthworks activities. Under the earthworks rules proposed by PC1, earthworks on any scale are no longer a permitted activity (unless they are to implement actions in a farm erosion risk treatment plan or farm environmental plan). As a result, all earthworks are a restricted discretionary activity regardless of scale and are a non-complying activity	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>if those earthworks (again regardless of scale) occur between 1 June and 1 October.</p> <p>Although submitter understands the above notified rule framework is an error, submitters comments are made on the plan change as notified given the legal effect of the provisions.</p> <p>Considers it inefficient to require resource consent for almost all earthworks regardless of scale and has concerns this will create a significant administrative burden for applicants and Council with little clear environmental benefit.</p> <p>Considers adverse environmental effects associated with small scale earthworks can be appropriately addressed through permitted activity conditions in the NRP and District Plans.</p> <p>Considers restricting all earthworks activities between 1 June and 1 October is overly restrictive and submitter recognises earthworks should be planned so that the majority of bulk earthworks occur outside of the winter months. Notes there may be instances where earthworks are unavoidable at this time, and with careful management can be undertaken in a manner that avoids, remedies, or mitigates adverse effects on land stability and runoff. Notes that the GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021), which is referred to in the earthworks provisions as the guiding document for earthworks practice, provides a pathway for earthworks to be undertaken during the winter months subject to careful management (refer specifically to section G5.0 of the guideline), and considers that</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>pathway should continue to be available to applicants through the consent process. Considers that non-complying activity status for earthworks that do not meet restricted discretionary conditions does not sufficiently facilitate the maintenance, upgrade, or development of its sites which leads to a high degree of uncertainty as to whether consents for maintenance, development, or upgrades to corrections sites will be granted under section 104D of the RMA, even where adverse effects of the part of the proposal that triggered non-complying activity status can be appropriately managed through consent conditions.</p> <p>Considers a reasonable level of earthworks, including potentially necessary earthworks during the winter months, should be enabled subject to appropriate conditions to manage potential adverse effects.</p>	
S248 Ara Poutama Aotearoa the Department of Corrections	S248.009	General comments - earthworks	Not Stated	Amendments to general policy for management of earthworks to improve practicality of policy.	Amend earthworks policy to improve practicality
S248 Ara Poutama Aotearoa the Department of Corrections	S248.012	General comments - earthworks	Not Stated	Amendment to restricted discretionary activity rule for earthworks, to recognise discharges of sediment are not included under permitted activity rule for earthworks (and are instead covered by the NRP's minor discharge rule R91).	Amendment to the restricted discretionary activity rule for earthworks, to recognise discharges of sediment are not included under the permitted activity rule for earthworks (and are instead covered by the NRP's minor discharge rule R91).

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S281 Kirsty Gill	S281.005	General comments - earthworks	Oppose	Considers earthwork provisions are complicated and farmers/land owners will not know how to meet requirements. Concerned stock welfare, farm safety and farm tracks access have been disregarded in new provisions.	Not Stated.
S285 Civil Contractor s New Zealand	S285.002	General comments - earthworks	Not Stated	<p>Notes that in relation to new regulations around vegetation clearance (for instance Rule WH.R18), engagement should be undertaken with the industry so contractors can adequately understand their responsibilities around sediment control while working on vegetation clearance sites.</p> <p>Advises it is unwise to include an impassable threshold in any standard, because at a point in time, rainfall events or unanticipated weather will throw this measure out. For instance, at certain points in time (for instance flooding) no site would comply even if there was no discharge from the site itself, so no work would be able to meet this term in consent.</p> <p>Considers it is better to include specific numbers in the guidance on how the standards set by the Natural Resources Plan are implanted on work sites, rather than in the Natural Resources Plan itself.</p>	Not stated
S285 Civil Contractor s New Zealand	S285.003	General comments - earthworks	Not Stated	<p>Notes the region is currently experiencing a major shortage of available cleanfill disposal sites, with a single significant site left in Wellington near the Southern Landfill, and this is escalating project costs.</p> <p>Appreciates sediment control is an important factor when planning land use for cleanfill sites.</p>	GWRC provide clarity about appropriate locations and conditions for cleanfill sites

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S3 Dougal Morrison	S3.009	General comments - economic cost/impact	Not Stated	Considers the proposed changes will significantly impact forest investment in the Wellington Region and reduce the benefits from carbon sequestration.	Not stated.
S22 Lynn Cadenhead	S22.010	General comments - economic cost/impact	Not Stated	Considers the costs of inaction (in the future) outweigh the financial cost to implement PC1.	Not stated.
S25 Robin Chesterfield	S25.003	General comments - economic cost/impact	Not Stated	Believes costs and restrictions of PC1 would make their forestry operation uneconomic and limit future income	Not stated
S26 Christine Stanley	S26.005	General comments - economic cost/impact	Not Stated	Concerned costs of implementing PC1 will reduce the ability of landowners to invest in improvements for water quality and that better outcomes would be achieved by encouraging and rewarding good land management.	Not stated
S30 Dean Spicer	S30.003	General comments - economic cost/impact	Not Stated	Concerned environmental and cultural benefits have not been quantified through an economic impact assessment and the process has been rushed and poorly developed. Considers council may have breached duties under Te Tiriti o Waitangi. Challenges the credibility of the plan change.	GWRC withdraw current PC1 and undertake economic, social and cultural impact assessment that is publicly disclosed, and use it to inform revised plan change.
S35 Amos Mann	S35.005	General comments - economic cost/impact	Not Stated	Considers costs are important but costs should not be dodged or kicked down the road, and the task is to problem-solve how best we can resource doing water better.	Not stated
S47 Richard Swan	S47.002	General comments - economic cost/impact	Not Stated	Concerned the economic impacts of proposed rules and requirements in PC1 would render forest operation uneconomic.	Not stated
S49 Hamish Levak	S49.003	General comments - economic cost/impact	Not Stated	Concern the costs and restrictions under the proposed new requirements will make small forestry operations uneconomic.	Not stated
S51 Mākara	S51.003	General comments -	Not Stated	High cost of implementing PC1 will fall to a small number of individual landowners	Remove the regulatory approach for PC1.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
and Ohariu large farms		economic cost/impact		rather than developers or communities as is the case for urban provisions. Concerned with how short timeframes for implementation in PC1 are. Seeks the removal of the regulatory approach for PC1, or otherwise that GWRC provides targeted support mechanisms to compensate for potential losses in farm income.	
S52 Jeremy Collyns	S52.002	General comments - economic cost/impact	Oppose	Believes costs and restrictions of PC1 would make their forestry operation uneconomic and limit future income	Not stated
S54 Peter Kiernan	S54.002	General comments - economic cost/impact	Oppose	Concerned the decisions of the proposed plan change could be rolled out on the Kapiti Coast -where the submitter resides. Concerned the extra costs associated with consultant and resource consent fees will make forestry uneconomical. Believes that rules governing forestry in PC1 would render interest in land incapable of reasonable use citing section 85 of the RMA.	Ensure that if national standards are followed forestry harvesting be a Permitted Activity under the plan
S55 Annette Cairns	S55.004	General comments - economic cost/impact	Oppose	Believes costs and restrictions of PC1 would make forestry business uneconomic and limit future income	Not Stated
S57 Sally Kean	S57.006	General comments - economic cost/impact	Not Stated	Opposes GWRCs attempt to control the materials and conditions of driveways.	Not Stated
S58 David and Carolyn Gratton	S58.002	General comments - economic cost/impact	Not Stated	Believes PC1 will make it difficult to support family economic well being or make reasonable use of the land citing section 85 of the RMA.	Clarify requirements imposed on land adjacent to high/highest risk land (pasture) or remove provisions from PC1.
S58 David and Carolyn Gratton	S58.003	General comments - economic cost/impact	Amend	Concerned about timing and costs of preparing erosion plans. Wants to see MPI erosion susceptibility tool used. Considers the mapping used in PC1 is not	Retain the NES-CF and exempt forestry blocks of less than 100ha from the PC1 controlled activity requirements.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				suitable for determining erosion prone land.	
S58 David and Carolyn Gratton	S58.005	General comments - economic cost/impact	Oppose	Believes small farms of less than 10ha should be exempt from PC1 provisions and the need to provide erosion management plans. If required, management plans should be simple to avoid consultants needing to be hired. Suggests lack of clarity on requirements for land that is not high/highest erosion risk.	Exempt small farms of less than 10ha from regulations requiring farm management/erosion risk management requirements to be prepared by farm consultants. Clarify requirements imposed on land adjacent to high/highest risk land (pasture) or remove provisions from PC1.
S59 Upper Hutt Rural Communities - Bob AnkerRobert Anker	S59.008	General comments - economic cost/impact	Not Stated	Concerned the section 32 does not adequately quantify the economic, environmental, and cultural costs and benefits through an economic impact assessment. S165 PUKERUA HOLDINGS LIMITED	S165.003	General comments - economic cost/impact	Oppose	Concerns PC1 will impact housing affordability negatively. Opposes schedule 30 and associated provisions. Consider the financial contribution burdensome and may impede on urban growth and intensification. Concerned PC1 and supporting documentation fail to assess the impact on landowners and developers, potentially impacting the private sector's commercial viability. Opposes a flat fee without evaluation, as it risks incentivising the provision of large lots over intensification, undermining Objective 2 and associated policies of the NPS-UD, which were not addressed in the Section 32 Report. Concerns about reliance on financial contributions vs alternative solutions within policy. Considers proposed financial contribution to offset residual stormwater deterioration should not be the only option, despite NPS	Seeks the following amendments to PC1: 1. Withdrawal of PC1 in its entirety to allow for a more comprehensive review of the policy and rule framework as it relates to freshwater management (including stormwater management and earthworks); OR 2. Should the relief sought in point 1) not occur, the Submitter seeks the relief set in relation to specific provisions of PC1 as set out in Section 3 of the original submission; AND 3. Any other relief (including consequential relief) to give effect to the decisions sought in relation to specific provisions of PC1 as set out in Section 3 of the original submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				prioritising water quality. Considers that Schedule 30 highlights the collection of funds for catchment-scale stormwater treatment systems, but the feasibility, effectiveness, and timing of such systems remain unclear. The submitter opposes the proposal from GWRC that this fee would be mandatory even if a development achieves greater than 85% reduction in wastewater, a stance strongly opposed as lacking proportionality and any effects-based rationale.	
S166 Akatarawa Valley Residents - Dr Anna De Raadt & Roger Fairclough	S166.006	General comments - economic cost/impact	Oppose	Concerns about cost to be borne by rural landowners with no evidence that they are the cause of the issue, and the lack of information available on what fees and charges GWRC will levy. 				soon to be imposed by Upper Hutt City Council. Questions which regulations have precedence where conflicting.	
S174 Akatarawa Valley Residents - Pam Ritchie	S174.006	General comments - economic cost/impact	Oppose	Concerns about cost to be borne by rural landowners with no evidence that they are the cause of the issue, and the lack of information available on what fees and charges GWRC will levy. Considers that for landowners who have not yet been in a position to build a home, this plan change is unreasonable and unfair. Concerned that proposed changes by GWRC are out of alignment with regulations soon to be imposed by Upper Hutt City Council. Considers it is difficult to stay on top of regulatory changes and is concerned that PC1 is out of alignment with regulations soon to be imposed by Upper Hutt City Council. Questions which regulations have precedence where conflicting.	All rules that add cost to landowners be reconsidered and "recalibrated" with scientific evidence, whereby the more important issues are tackled instead of a "broad brush approach" to all perceived issues. A reconciliation and analysis of the GWRC proposal and other local authority regulations relevant to rural landowners (e.g. UHCC PC50) is completed to identify instances where regulation is inconsistent.
S181 John Boyle	S181.005	General comments - economic cost/impact	Oppose	Questions the credibility of PC1 due to the lack of a specialist economic impact assessment to quantify environmental and social benefits.	Withdraw PC1 and undertake a publicly disclosed detailed economic, social and cultural impact assessment that informs a revised plan change
S182 Susan Boyle	S182.005	General comments - economic cost/impact	Not Stated	Concerned the environmental and social benefits have not been quantified through a specialist economic impact assessment. Challenges the credibility of the GWRC plan change.	Withdraw PC1 and undertake economic, social and cultural impact assessment to inform a revised plan change.
S184 David Bennett & Jenni LeanDavid and Jenni Bennett and Lean	S184.002	General comments - economic cost/impact	Oppose	Concerns that forestry rules under PC1 would render submitters forestry land uneconomic and incapable of reasonable use under section 85 of the RMA.	Not stated
S189 SAMUEL KAHUI	S189.004	General comments - economic cost/impact	Support	Notes PC1 will be expensive but that true costs of not implementing PC1 are huge, felt over multiple generations and may be irreversible.	Support PC1 through to implementation.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Considers GWRC can provide the framework and assist with the collaboration of mana whenua, communities, and stakeholders in the restoration and celebration of Wai and natural environments. Mā whero, mā pango ka oti ai te mahi.	
S193 Wairarapa Federated Farmers	S193.004	General comments - economic cost/impact	Not Stated	Considers the direct and opportunity costs of the proposed policies and rules are too high for rural landowners and amount to a form of 'managed retreat' for public good, with no compensation.	Not Stated
S199 Pikarere Farm Limited	S199.003	General comments - economic cost/impact	Not Stated	Considers cost is an important factor and should be given proper consideration.	Not stated
S202 Graeme Iain Shellard , Sarah Elizabeth Shellard, Cameron Anthony Shellard, Finlay David ShellardGraeme Shellard	S202.005	General comments - economic cost/impact	Not Stated	Considers the cost of this work and the impact has not been effectively considered. Notes a range of activities associated with PC1 that will incur additional costs and that these costs are either incurred by GWRC or the landowner Considers these costs are extreme for the value gained and the source and value of funding required is not addressed. Considers it likely that there will be a split between landowners that comply and the approach to forcing landowners to comply, which is abrasive, divisive, expensive and unlikely to succeed.	Withdraw PC1. Develop and implement improvements through community-based support / education supported by measurements and reporting. Run workshops with the wider impacted community to review the originally considered high level options including all costs and benefits, impacts and high-level risks.
S215 Paul Persico	S215.001	General comments - economic cost/impact	Oppose	Considers PC1 will create a problem and financial burden for lifestyle property owners in Mangaroa and Akatarawa areas, but will achieve nothing as no problem exists. Considers PC1 will be a huge cost to rate payers and the money would be better of spent finding the source of the problem and rectifying it.	Not Stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Agrees with the Maymorn Collective Submission in all aspects.	
S224 Terawhiti Farming Co Ltd	S224.003	General comments - economic cost/impact	Amend	Considers the cost of implementing the proposed changes on farms will be very high and will significantly impact farm viability as financial implications fall directly to individual landowners in rural communities. Considers the Plan Change lacks the flexibility to stage work. Considers the proposed changes will significantly devalue properties.	Remove PC1's regulatory approach. or provide a range of targeted support mechanisms to recognise the cost of implementation and to compensate for the ongoing loss of potential farm income.
S229 Te Kamaru Station Ltd	S229.003	General comments - economic cost/impact	Amend	Considers the cost of implementing the proposed changes on farms will be very high and will significantly impact farm viability as financial implications fall directly to individual landowners in rural communities. Considers the Plan Change lacks the flexibility to stage work. Considers the proposed changes will significantly devalue properties.	Remove PC1's regulatory approach. or provide a range of targeted support mechanisms to recognise the cost of implementation and to compensate for the ongoing loss of potential farm income.
S231 Te Marama Ltd	S231.004	General comments - economic cost/impact	Not Stated	Concerned cost implications on farms as a result of proposed changes will be very high and will significantly impact farm viability. Notes unlike PC1 changes that impact urban areas, the financial implications fall directly to individual landowners in rural communities. Considers PC1 does not give flexibility to stage work, unlike three waters work where many costs are dispersed through rates increases / council debt over time. Submitter expects the proposed changes will significantly devalue properties given high cost of implementation and reduction in farm incomes. Seeks that council first and foremost remove PC1's regulatory approach proposed. If this does not occur, then we	Seeks removal of PC1's regulatory approach. If this does not occur, then expects council to provide a range of targeted support mechanisms to recognise the cost of implementation and to compensate for the ongoing loss of potential farm income.

				expect council to provide a range of targeted support mechanisms to recognise the cost of implementation and to compensate for the ongoing loss of potential farm income.	
S237 John Turkington Limited	S237.004	General comments - economic cost/impact	Not Stated	Concerns with lack of evidence provided by GW on environmental effects from forestry.	Not stated
S240 Porirua City Council	S240.002	General comments - economic cost/impact	Not Stated	Concerns that with the financial levers and system available, Council cannot afford the improvements Plan Change 1 is seeking. Considers it is not viable to expect city ratepayers alone to cover the magnitude of cost identified in the three waters reform programme and that the approach taken in Plan Change 1 is ignorant of the national issue that councils cannot afford to maintain and upgrade wastewater networks under the current funding model available to them. Notes it comes down to the degree to which outcomes can be achieved, the length of time and who pays.	Regional Council work closely with territorial authorities on the challenge of funding maintenance and funding of wastewater networks.
S241 Pukerua Property Group Ltd	S241.002	General comments - economic cost/impact	Oppose	Considers PC1 has significant consequences for affordability of housing and land development in Wellington Region. Notes addition of a significant financial contribution for new residential units will have flow on housing affordability effects in the region and is inconsistent with Objective 2 and associated policies of NPS-UD. Concerned this has not been considered in the Section 32 report and completely ignores the affordability implications of the proposed changes, despite this being a key objective of the NPS-UD.	Withdrawal of PC1
S242 Anya Pollock	S242.004	General comments -	Support	Supports Plan Change One regardless of financial cost Notes that GWRC can seek	Not Stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		economic cost/impact		new sources of funding with the right leadership.	
S249 Isabella Cawthorn	S249.012	General comments - economic cost/impact	Support	Considers the costs imposed on developers are important. Supports imposed costs that prevent developments from affecting wai as it will encourage them to innovate and improve processes, or exit the market.	Not stated
S265 The Maymorn Collective - Amanda and Rami Mounla - Marita Manns Trustee Limited	S265.003	General comments - economic cost/impact	Oppose	Considers the environmental and social benefits have not been quantified through a specialist economic impact assessment.	Withdraw PC1 and undertake a detailed economic, social and cultural impact assessment, that is publicly disclosed, and this is used to inform the revised plan change.
S266 The Maymorn Collective - Tamara Hrstich	S266.003	General comments - economic cost/impact	Oppose	Considers the environmental and social benefits have not been quantified through a specialist economic impact assessment.	Withdraw PC1 and undertake a detailed economic, social and cultural impact assessment, that is publicly disclosed, and this is used to inform the revised plan change.
S267 The Maymorn Collective - Marluk Agistments Ltd - Richard and Lynn Bialy	S267.003	General comments - economic cost/impact	Oppose	Considers the environmental and social benefits have not been quantified through a specialist economic impact assessment.	Withdraw PC1 and undertake a detailed economic, social and cultural impact assessment, that is publicly disclosed, and this is used to inform the revised plan change.
S268 The Maymorn Collective - Bruce Bates and Kim Cheeseman	S268.003	General comments - economic cost/impact	Oppose	Considers the environmental and social benefits have not been quantified through a specialist economic impact assessment.	Withdraw PC1 and undertake a detailed economic, social and cultural impact assessment, that is publicly disclosed, and this is used to inform the revised plan change.

S269 The Maymorn Collective - Paul and Megan Persico	S269.003	General comments - economic cost/impact	Oppose	Considers the environmental and social benefits have not been quantified through a specialist economic impact assessment.	Withdraw PC1 and undertake a detailed economic, social and cultural impact assessment, that is publicly disclosed, and this is used to inform the revised plan change.
S270 The Maymorn Collective - Dean and Michelle Spicer and Benjamin Shaw (as Trustees for Bridgewater Trust)	S270.003	General comments - economic cost/impact	Oppose	Considers the environmental and social benefits have not been quantified through a specialist economic impact assessment.	Withdraw PC1 and undertake a detailed economic, social and cultural impact assessment, that is publicly disclosed, and this is used to inform the revised plan change.
S271 The Maymorn Collective - John and Susan Boyle	S271.003	General comments - economic cost/impact	Oppose	Considers the environmental and social benefits have not been quantified through a specialist economic impact assessment.	Withdraw PC1 and undertake a detailed economic, social and cultural impact assessment, that is publicly disclosed, and this is used to inform the revised plan change.
S272 The Maymorn Collective - Philip and Teresa Eales	S272.003	General comments - economic cost/impact	Oppose	Considers the environmental and social benefits have not been quantified through a specialist economic impact assessment.	Withdraw PC1 and undertake a detailed economic, social and cultural impact assessment, that is publicly disclosed, and this is used to inform the revised plan change.
S285 Civil Contractors New Zealand	S285.001	General comments - economic cost/impact	Not Stated	Considers PC1 will have significant impacts on the region's civil construction industry, will result in increased costs for ratepayers, and is unlikely to result in better environmental or consenting outcomes.	Not stated
S39 Fenaughty Partnership - Riu Huna Farm	S39.004	General comments - fresh water	Not Stated	Concerned the focus on sediment and erosion is based on data from a single monitoring station and the use of broad-brush modelling to identify potential erosion sources.	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Concerned the monitoring data used to determine the levels and sources of e-coli across the multiple catchments is based on extrapolation from data from one monitoring site</p> <p>Considers there needs to be more fine scale and regular water quality studies and potentially monitoring at the scale of each farm.</p>	
S45 Heather Blissett	S45.006	General comments - fresh water	Not Stated	<p>Considers the statement "fish communities are resilient" to be too passive and that the term resilience suggests that fish communities could be forced to live in extremities of survival. (references Pg. 16)</p>	Not stated
S51 Mākara and Ohariu large farms	S51.004	General comments - fresh water	Not Stated	<p>Considers there is currently insufficient water quality data to identify where work should be targeted. States that there is almost no data which identifies the source of sediment or e-coli in streams, nor natural levels of sediment and e-coli. Notes that there is only one water quality monitoring site for Mākara and Ohariu, which only covers the Mākara Stream catchment. Considers there are streams within and outside the Mākara Stream catchment with good water quality, which would still be subject to land use restrictions. Seeks that a farm-scale and catchment-scale approach is adopted, rather than across a whitua or Freshwater Management Unit.</p>	Not stated.
S101 Wellington International Airport Limited	S101.003	General comments - fresh water	Amend	<p>Does not oppose amendments to schedule F2(C), F4 and F5, and understands that a consenting pathway remains available through the operative NRP provisions for regionally significant infrastructure to continue to operate in</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				these areas. Provided this pathway remains available, supports the identification of the additional scheduled items (namely Horse mussels and Adamsiella beds within Evans Bay), subject to the identification of these particular features being accurately identified and mapped.	
S120 Akatarawa Valley Residents - John Van Nortwick & Jill Van Nortwick John & Jill Van Nortwick	S120.005	General comments - fresh water	Oppose	Considers that data on river quality throughout the catchment is required to understand the extent of the problem and then determine the causes.	Use relevant scientific evidence of sufficient spatial "resolution" as a basis to inform policy.
S121 Akatarawa Valley Residents - Karen Wallace & Mark Robbins Karen Wallace Mark Robbins	S121.005	General comments - fresh water	Oppose	Considers that data on river quality throughout the catchment is required to understand the extent of the problem and then determine the causes.	Use relevant scientific evidence of sufficient spatial "resolution" as a basis to inform policy.

Use relevant scientific evidence of sufficient spatial "resolution" as a basis to inform policy.
S175 Tracy Simms	S175.004	General comments - fresh water	Not Stated	Considers there is not enough water quality information to confirm where sediment is originating from and that more monitoring stations/points and more data are required to establish the source of any quality reduction.	Withdraw the Plan Change
S177 Transpower New Zealand Limited	S177.008	General comments - fresh water	Not Stated	Considers it inappropriate that provisions for vegetation clearance and the permitted activity rule for earthworks have been included in the freshwater planning instrument, as the principal purpose of these provisions is to control the use of land for the purpose of soil conservation. In addition to this, these rules do not manage discharges to freshwater. Considers provisions must be reallocated to Part 1 Schedule 1 planning instrument.	Reallocate vegetation clearance and the permitted activity rule for earthworks to Part 1 Schedule 1 planning instrument.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S179 John Coveney	S179.002	General comments - fresh water	Not Stated	Where resource consent is required to take water, there should be evidence-based data showing detrimental effects. Opposes blanket regulation. Considers restrictions to take water from an allocated source should only be put in place when data or science shows there is a detrimental effect to that waterway, aquifer or ecosystem and/or the upstream or downstream cumulative effect. Considers the current methodology results in costs relates to offsets, lost production and wasted infrastructure. Considers the status quo should apply until data or science proves otherwise and blanket regulation is opposed.	Not stated
S185 Ray Beentjes	S185.002	General comments - fresh water	Not Stated	Concerned about increased amounts of sediment coming from the Pakuratahi River when flows increase and potential e.coli and pathogen loads in the water. Observes algae in summer months when flows are low resulting in issues with recreation and amenity as well as human health when making contact with water. Concerns river engineering such as railway iron degrades water quality and creates potential hazards for river users when slash and logs get caught on structures	Not stated
S185 Ray Beentjes	S185.005	General comments - fresh water	Support	Supports the concept of Te Mana o te Wai and the hierarchy of obligations.	Prioritise ecosystem health and contact recreation prioritised.
S188 Wellington Fish and Game Regional Council	S188.006	General comments - fresh water	Not Stated	Seeks regular, meaningful updates and reports to statutory managers and collaborators on outcomes of management and action plans. Considers them important to maintain collaboration and achieve environmental targets.	Seeks regular, meaningful updates and reports to statutory managers and collaborators on outcomes of management and action plan

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S188 Wellington Fish and Game Regional Council	S188.015	General comments - fresh water	Not Stated	Considers if sports fish or game bird habitats and interactions are considered to potentially impact on nationally threatened freshwater species, Wellington Fish and Game Council as statutory managers are required to be involved in any management plans and actions.	Not stated
S193 Wairarapa Federated Farmers	S193.006	General comments - fresh water	Not Stated	Supports an integrated catchment approach to the management of sediment and nutrient loss, supported by the Council and underpinned by non-regulatory methods such as FAPs and Regional Forest Spatial Plan. Considers this approach allows the Council to demonstrate best practice regarding the management and protection of natural ecosystems including freshwater ecosystems.	Not Stated
S193 Wairarapa Federated Farmers	S193.013	General comments - fresh water	Amend	<p>Supportive of efforts to promote the progressive shading of streams, providing landowners are supported with financial assistance to fence, plant, and maintain plantings and the width of the plantings is reasonable.</p> <p>Suggests stream shading may not assist the Council in meeting proposed TASs because shade from dense planting can cause the loss of undergrowth and bank-armouring vegetation, such as grasses, leading to a transient phase of increased bank erosion in small streams as the stream channel widens. The loss of undergrowth can also lead to sheetwash and rolling, which can further increase sediment loads (MFE Guidance for implementing the NPS-FM sediment requirements). Sediment-related water quality following riparian planting is likely to get worse before it gets better as stream banks erode and channels widen</p>	Undertake further monitoring to understand periphyton growth characteristics in the region.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>in response to increased tree shade (cites Rob Davies-Colley & Andrew Hughes (2020): Sediment-related water).</p> <p>Considers it's not practical or feasible to plant every stream, river, lake, wetland and spring margin.</p> <p>Considers whilst stock exclusion from small streams (<1m) within the Mangaroa River and Mākara Stream catchments can make a contribution to addressing water quality issues there is little research on riparian management measures to reduce stream bank erosion. Cites Hugh (2016) which states that a one-size-fits-all approach to riparian management measures to reduce stream bank erosion is unlikely to be appropriate or effective. Considers this knowledge should be considered in FAPs to address interim and long-term priorities, including attaining the national bottom lines for TASs, and what can be achieved by interventionist policies.</p> <p>Notes the s32 report links stream shading policies to the management of periphyton growth. Considers in nearly all part FMUs the Council has insufficient data on periphyton biomass. Suggests the Council undertake further monitoring to understand periphyton growth characteristics in the region. Supports the Council's intention to address periphyton growth in specific 'hot spots' through FAPs.</p>	
S193 Wairarapa Federated Farmers	S193.018	General comments - fresh water	Amend	<p>Supports the development and use of Freshwater Action Plans in principle.</p> <p>Acknowledges the importance of the</p>	That urban FAPs are completed by the end of 2026 and rural FAPs be completed by the end of 2027.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Council's partnership with mana whenua/tangata whenua but considers the involvement of communities, stakeholders and territorial authorities is also important in the development of FAPs and this is recognised in the NPS-FM. References the reporting officer recommendations in PC1 of the RPS Hearing Stream 5 (Freshwater) to amend Method FW1 of the RPS to include engagement with communities, stakeholders and territorial authorities in the development of FAPs. The submitter supported this recommendation and considers the RPS wording should align with the wording in Methods M36-41 of the proposed NRP.</p> <p>Considers the involvement of communities, stakeholders, and territorial authorities in the development of FAPs is important as the s32 report acknowledges that achieving 12 of the 321 TASs across the two whitua will require actions in addition to those currently contemplated and that the nature and scale of these additional methods will be determined through the action planning processes after the plan-making process has been completed.</p> <p>Notes there are 72 triggers for FAPs across both whitua and addressing these through FAPs will be a lot of work for the Council, mana whenua and communities. Submitter seeks relief that the urban FAPs be completed by the end of 2026 and that rural FAPs be completed by the end of 2027.</p> <p>Considers the FAPs should be targeted to catchment-scale actions. Concerned that</p>	<p>Make any consequential amendment(s) necessary to give effect to the relief sought.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				the boundaries for the part-FMUs may need refining for the purposes of managing water quality in both rivers and receiving environments (e.g. harbours). For example, the submitter understands that some part-FMUs have catchments that drain in different directions..	
S197 Greg Davies	S197.002	General comments - fresh water	Not Stated	<p>Concerned with increased sediment in the Hutt River when flows increase and potential e.coli and pathogen loads in the water.</p> <p>Observes algae in summer months when flows are low resulting in issues with recreation and amenity as well as human health when making contact with water.</p> <p>Concerned that river engineering such as railway iron degrades water quality and creates potential hazards for river users when slash and logs get caught on structures.</p>	Not Stated.
S197 Greg Davies	S197.004	General comments - fresh water	Support	Supports the concept of Te Mana o te Wai and the hierarchy of obligations.	Prioritise ecosystem health and contact recreation.
S206 Winstone Aggregates	S206.022	General comments - fresh water	Not Stated Oppose	Concerned that several provisions are subject to the Freshwater Planning Process (FPP) where freshwater is only a peripheral issue to which the provision relates. Considers this an inappropriate use of the FPP, giving rise to jurisdictional problems such as restricted appeal rights. Considers improper allocation results in delays and costs, and is exacerbated by the restrictive activity statuses proposed.	Review the scope of FPP versus Schedule 1 processes. Only provisions where freshwater is the primary issue to be subject to the FPP; remaining provisions allocated to Schedule 1.
S212 Heather Phillips	S212.009	General comments - fresh water	Not Stated	Concern about Trout protection within Plan Change 1 and suggests inclusion is at odds with other government department statements.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S216 Te Rūnanga o Toa Rangatira (Te Rūnanga)	S216.002	General comments - fresh water	Support	<p>Te Rūnanga provided input into the draft plan change including matters relating to Māori rights and interests to freshwater; Te Mana o Te Wai under the NPS-FM; mahinga kai as a highly significant value; and timeframes for E.coli target attribute states and the enterococci coastal water objectives.</p> <p>Supports the proposed objectives and policies in the plan change which sets new direction to restoring rivers, lakes, natural wetlands for contact recreation and Māori customary use.</p>	Not stated
S233 Calum Bradbury	S233.002	General comments - fresh water	Not Stated	<p>Concerned about increased amounts of sediment coming from the Pakuratahi River when flows increase and potential e.coli and pathogen loads in the water.</p> <p>Observes algae in summer months when flows are low resulting in issues with recreation and amenity as well as human health when making contact with water.</p> <p>Concerns river engineering such as railway iron degrades water quality and creates potential hazards for river users when slash and logs get caught on structures</p>	Not stated
S233 Calum Bradbury	S233.005	General comments - fresh water	Support	Supports the concept of Te Mana o te Wai and the hierarchy of obligations.	Prioritise ecosystem health and contact recreation prioritised.
S235 Shonaugh Wright	S235.002	General comments - fresh water	Not Stated	<p>Observes algae in summer months when flows are low resulting in issues with recreation and amenity as well as human health when making contact with water.</p> <p>Concerns that river engineering such as railway iron degrades water quality and creates potential hazards for river users</p>	Not stated

				when slash and logs get caught on structures	
S235 Shonaugh Wright	S235.004	General comments - fresh water	Support	Supports the concept of Te Mana o te Wai and the hierarchy of obligations.	Prioritise ecosystem health and contact recreation prioritised.
S244 Andrew Esler	S244.002	General comments - fresh water	Support	<p>Concerned about amounts of sediment in the Hutt River when flows increase and potential e.coli and pathogen loads in the water.</p> <p>Observes algae in summer months when flows are low resulting in issues with recreation and amenity as well as human health when making contact with water.</p> <p>Concerns that river engineering such as railway iron degrades water quality and creates potential hazards for river users when slash and logs get caught on structures.</p>	Not stated
S244 Andrew Esler	S244.004	General comments - fresh water	Support	Supports the concept of Te Mana o te Wai and the hierarchy of obligations.	Prioritise ecosystem health and contact recreation prioritised.
S246 Water New Zealand	S246.002	General comments - fresh water	Amend	Notes the NPS-FM requires regional plans and policy statements to embed Te Mana o te Wai into decision making and considers requiring local kaupapa Māori in decision-making structures will ensure that Te Mana o te Wai, the spiritual wellbeing and whakapapa of Te Hurihanga Wai (the water cycle) is prioritised, respected, protected and enhanced.	<p>Te Mana o te Wai hierarchy of obligations are made clearer in the definitions and objectives, including prioritising mana whenua, their whakapapa and tikanga, in freshwater management and decision making.</p> <p>PC1 instills an integrated catchment approach that recognises the interconnected nature of a catchment, the receiving environments and Te Hurihanga Wai, and that includes wastewater, stormwater and drinking water supply, rather than individual plans or strategies for each network.</p> <p>PC1 states clearly that Te Mana o te Wai guides all policy, plans and consents that impact on three waters, from the earliest stage of consideration and before options are presented to regional council, planning committee or consulted on with</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					communities.
S246 Water New Zealand	S246.009	General comments - fresh water	Not Stated	Supports the cumulative and localised impact of stormwater and wastewater discharges on drinking water supplies and community drinking water supplies given consideration but considers that drinking water, the sources, protection, allocation and efficient use of water need more consideration though the plan, as part of the second obligation of Te Mana o Te Wai.	Provide more consideration of drinking water, the sources, protection, allocation and efficient use of need more consideration though the plan, as part of the second obligation of Te Mana o Te Wai.
S248 Ara Poutama Aotearoa the Department of Corrections	S248.006	General comments - fresh water	Amend	Notes inappropriate use of the freshwater planning process for vegetation clearance and earthworks provisions. Provisions for vegetation clearance and the permitted activity rule for earthworks, have been included in this freshwater planning instrument. Considers this is an inappropriate use of the freshwater planning instrument as principal purpose of these provisions is to control the use of land for the purpose of soil conservation. Also considers none of these rules manage discharges to freshwater.	Seeks provisions be reallocated to the Part 1 Schedule 1 planning instrument.
S249 Isabella Cawthorn	S249.001	General comments - fresh water	Support	Strongly supports the water and indigenous biodiversity elements of PC1 .	Not stated
S250 John and Jacqueline Diggins	S250.005	General comments - fresh water	Oppose	Notes information regarding the Mangaroa and Akatarawa catchment. Considers the headwaters of the catchments are 20km from the monitoring points. Cites a GWRC Zoom Q&A session. Considers GWRC is assuming that all sediment in rivers is the result of human activity. Suggests there is a strong probability that human activity can contribute to the sediment load but it is	Put PC1 on hold until GWRC has established at least 3 monitoring points and has a significant data base to identify source of water quality reduction within the Mangaroa and Akatarawa catchments.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>important to consider that a proportion arises from natural erosion processes.</p> <p>Considers it vital that GWRC has a complete picture of all factors within the catchments, both natural and man-made rather than assuming all sediment is a result of human activity.</p>	
S253 John Western	S253.002	General comments - fresh water	Not Stated	<p>Concerned about increased amounts of sediment in the Hutt River when flows increase and potential e.coli and pathogen loads in the water.</p> <p>Observes algae in summer months when flows are low resulting in issues with recreation and amenity as well as human health when making contact with water.</p> <p>Concerns that river engineering such as railway iron degrades water quality and creates potential hazards for river users when slash and logs get caught on structures</p>	Not Stated
S253 John Western	S253.004	General comments - fresh water	Not Stated	Supports the concept of Te Mana o te Wai and the hierarchy of obligations.	Prioritise ecosystem health and contact recreation prioritised.
S263 New Zealand Carbon Farming Group ("NZCF")	S263.002	General comments - fresh water	Oppose	<p>Notes majority of PC1 provisions subject to this submission form part of a freshwater planning instrument. Notes the Section 32 Report provides the following justification in 'Table A1: Analysis of PC1 provisions, including definitions, schedules, and maps, to identify the freshwater planning instrument' in respect of the forestry related provisions: "These policies, rules, method and supporting definitions, schedules and maps focus on the management of rural land use activities, forestry, and vegetation clearance. These provisions</p>	<p>1. That the provisions of the Proposed Plan Change that regulate commercial forestry, including those provisions that are intended to prevail over the NESPF, are withdrawn (or the Proposed Plan Change is not included in the NRP) until such time as:</p> <ul style="list-style-type: none"> - the efficiency and effectiveness of the NESCF has been monitored and the results of such monitoring support the need for provisions in the NRP that prevail over the NESCF; - the scope of the Proposed Plan Change clarified, including in respect of permanent forests, or commercial forests planted for carbon sequestration purposes;

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>seek to manage the use of land to achieve freshwater outcomes. They relate to objectives that give effect to the NPS-FM." Given the stated primary intent of the provisions is to manage a land use activity, considers PC1 draws a longbow in determining scope of the freshwater planning instrument. Concerned using a freshwater planning instrument to address land use activities inappropriately affects (inferred) the procedural rights of the submitter.</p> <p>Notes PC1 including the Section 32 Report, does not explicitly identify the Objective that gives rise to the provisions being a freshwater planning instrument.</p>	<p>- decisions on submissions on Proposed Change 1 to the WRPS have been made;</p> <p>- the recommendations in the Te Whaitua te Whanganui-a-Tara Implementation Programme 2021 accurately and appropriately reflected in Proposed Plan Change provisions;</p> <p>- a fulsome evaluation of the provisions is undertaken in a manner consistent with section 32 of the RMA, with the outcome of that evaluation confirming the necessity of the Proposed Plan Change; and an evaluation is completed under section 32(4) of the RMA, that explicitly evaluates the relevant provisions of the Proposed Plan Change relative to the NESPF, with the outcome of that evaluation confirming the necessity of provisions that prevail over the NESPF.</p> <p>2. Should the relevant provisions of the Proposed Plan Change not be withdrawn (or the Proposed Plan Change is included in the NRP), NZCF seeks that the Proposed Plan Change is amended to make all required changes, including the specific amendments set out in Table at Appendix A. It is noted that the relief in Appendix A is only sought should NZCF's primary relief (being the withdrawal of the Proposed Plan Change or the Proposed Plan Change not being include in the NRP) not be accepted.</p> <p>3. Such further, alternative or consequential relief as may be necessary to fully give effect to this submission.</p> <p>4. Consistent with the Implementation Plans' recommendations, NZCF is available and willing to work collaboratively with GWRC, including through the sharing of information in respect of commercial forestry and the implementation of the NESCF, to further develop practice and any necessary regulatory intervention to address the adverse effects of discharges from commercial forestry activities on water quality.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S283 Todd Henry	S283.002	General comments - fresh water	Not Stated	<p>Concerned about increased amounts of sediment in the Hutt River when flows increase and potential e.coli and pathogen loads in the water.</p> <p>Observes algae in summer months when flows are low resulting in issues with recreation and amenity as well as human health when making contact with water.</p> <p>Concerns that river engineering such as railway iron degrades water quality and creates potential hazards for river users when slash and logs get caught on structures</p>	Not Stated
S283 Todd Henry	S283.004	General comments - fresh water	Support	Considers these are a priority under Te Mana o te Wai	Prioritise ecosystem health and contact recreation prioritised. Prioritise ecosystem health and contact recreation prioritised.
S151 Wellington Water Ltd	S151.011	General comments - stormwater management	Amend	<p>Supports the requirement for hydrological controls for land uses that create new, or redevelop existing, impervious surfaces. Supports a consistent definition for hydrological controls between the NRP and the Regional Policy Statement (RPS). Promotes a cascading approach to addressing hydrological control in the RPS and NPS; with the RPS setting a regional requirement for hydrological controls and the detail of hydrological control standards being set by the NRP. Considers the NRP provisions merely re-state the requirement for hydrological controls and are considerably less specific than corresponding provisions proposed for inclusion in the RPS PC1. Would support standards based on a specified depth of rainfall retention (e.g. retention of the first 5mm of rainfall depth).</p>	Amend relevant provisions in the NRP to contain clear, detailed and specific direction regarding the hydrological control standards to be met. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S161 GILLIES GROUP MANAGEMENT LTD	S161.006	General comments - stormwater management	Oppose	Considers there is insufficient detail on the types of hydrological controls and WSUD are required for various types and scales of development. Considers the standards pose significant burdens on property owners and developers. Considers that engineering advice should not be necessary for the creation of small impervious areas, noting a permitted activity rule for 30m ² of impervious areas. Considers PC1 does not adequately evaluate financial costs on landowners, developers and ratepayers, including flow-on costs on the commercial viability of housing supply and affordability.	Not stated
S165 PUKERUA HOLDINGS LIMITED	S165.006	General comments - stormwater management	Oppose	Considers PC1 lacks sufficient detail about what types of hydrological controls and water-sensitive design required for different types/scales of development. Considers requiring the treatment of all impervious surfaces is a big financial burden to owners, simultaneously reducing the need for the treatment of areas due to control of building materials. Concerned that the conditions in the standards pose significant burdens on property owners as a whole. Concerned that the Permitted activity rule that impervious surfaces less than 30m ² should necessitate engineering advice for the design of site-specific controls. Concerns about implications for facilitating necessary urban growth. Concerns that PC1 lacks consideration for financial costs and impacts on the commercial viability of housing supply.	Seeks the following amendments to PC1: 1. Withdrawal of PC1 in its entirety to allow for a more comprehensive review of the policy and rule framework as it relates to freshwater management (including stormwater management and earthworks); OR 2. Should the relief sought in point 1) not occur, the Submitter seeks the relief sought in relation to specific provisions of PC1 as set out in Section 3 of the original submission); AND 3. Any other relief (including consequential relief) to give effect to the decisions sought in Section 3 of the original submission
S169 KORU HOMES NZ LIMITED	S169.051	General comments - stormwater management	Not Stated	Concerned there is insufficient detail on what types of hydrological controls and water sensitive design are required for development.	Withdrawal of PC1 in its entirety to allow for a more comprehensive review of the policy and rule framework as it relates to freshwater management (including stormwater management and earthworks);

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Considers the conditions will pose a significant burden on property owners/developers requiring impervious surface treatment and a reduction in contaminants through building materials</p> <p>Considers engineering advice should not be a requirement for the design of site specific controls for the creation of small areas of impervious surface.</p> <p>Concerned the s32 evaluation doesn't adequately assess the implication costs of PC1 and its impacts on urban growth to support population growth and economic development.</p>	<p>OR</p> <p>2. Should the relief sought in point 1) not occur, the Submitter seeks the relief set out in submission;</p> <p>AND</p> <p>3. Any other relief (including consequential relief) to give effect to the decisions sought in submission;</p>
S173 ARAKURA PLAINS DEVELOP MENT LIMITED	S173.005	General comments - stormwater management	Oppose	<p>Considers there is insufficient detail on the types of hydrological controls and WSUD are required for various types and scales of development. Considers the standards pose significant burdens on property owners and developers. Considers that engineering advice should not be necessary for the creation of small impervious areas, noting a permitted activity rule for 30m² of impervious areas. Considers PC1 does not adequately evaluate financial costs on landowners, developers and ratepayers, including flow-on costs on the commercial viability of housing supply and affordability.</p>	Not stated
S225 Upper Hutt City Council	S225.015	General comments - stormwater management	Oppose	Not stated	Delete or significantly amend hydrological controls for all development, which are going beyond hydraulic neutrality, as these are unclear and seem to be overly onerous;
S22 Lynn Cadenhead	S22.009	General comments - stormwater management	Support	Supports all provisions which require development that increases impermeable surfaces to achieve neutral or lesser stormwater runoff compared to pre-development. Notes that stormwater	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				retention is necessary to avoid flashy rainfall runoff.	
S33 Wellington City Council	S33.005	General comments - stormwater management	Not Stated	Concerned the proposed framework for managing the effects of stormwater runoff from development is already regulated through the PDP, and this would lead to applicants going through two different consenting processes. Suggest stormwater runoff from development is better regulated at the District level.	Not stated
S259 Isla Walker	S259.001	General comments - stormwater management	Oppose	Considers the plan overly restrictive in relation to impervious surfaces as these surfaces help high volumes of rainfall-runoff quickly and reduce inundation contributing to landslips. Objects to existing impervious areas should not be included.	Not Stated
S16 Pauatahanui Residents Association	S16.002	General comments - maps	Not Stated	Considers the maps in PC1 make it difficult for property owners to work out how they might be affected.	Not stated
S26 Christine Stanley	S26.002	General comments - maps	Amend	Concerns with map quality and ability to identify properties sites and marks on individual properties.	Provide better quality maps.
S26 Christine Stanley	S26.008	General comments - maps	Amend	Concerns with map quality and ability to identify properties	Amend Maps
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.020	General comments - maps	Not Stated	Concerned the maps (based on mapping by Easton) identifying the highest risk erodible land for pastoral, woody vegetation and plantation forestry land are based on an assumption that bare land after clear-felling will have a risk of erosion similar to pasture and there is a significant window of vulnerability after harvest. Considers this risk is overstated as roots and minor debris armour the slope for a period and there are ways of	Commission a technical review of the mapping by Easton et al.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>mitigation erosion risk after harvest. Notes forestry land is only in a more vulnerable state (after harvest) about 10% of the time and should be regarded as if it was permanent woody vegetation, not pasture or bare soil.</p> <p>Considers the mapped erosion risk is relative rather than absolute, and does not account for underlying geology/lithology, roadworks, soil disturbance and forestry related activities as a potential source of sediment. Notes the mapping uses a 5m resolution, which is higher than the NES-CF and much of the highest risk erosion prone areas identified by Easton are so large that, had they qualified as Red Zone, the NES-CF/ESC resolution would have picked them up.</p> <p>Notes the C factor identified for the maps, and disagrees that pasture is only twice as susceptible to erosion as woody vegetation and that otherwise undisturbed bare earth (with or without roots) should not be 10 times worse than pasture. Considers the Risk of Erosion model is not nearly as sophisticated as that used to calculate Erosion Susceptibility Classes (ESC) for the NES-CF.</p> <p>References earlier mapping (2012) that considered the risk of pastureland slipping into water bodies. References Stats NZ Highly Erodible Land maps. Notes several researchers who state that shallow landslides often do not reach waterbodies and most of the material is retained on site as talus, particularly on sites with woody vegetation. Considers the mapping contracted to Easton et al did</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>not consider the risk of sediment actually getting into waterbodies.</p> <p>Concerned the identified land parcels do not take into account the underlying lithology and Land Use Class Categories as is done for Erosion Susceptibility Classification used by NES-CF, which is intended to reflect an absolute risk of erosion.</p> <p>Considers the approach used by Easton et al, and data produced should be subjected to expert technical review.</p>	
S39 Fenaughty Partnership - Riu Huna Farm	S39.010	General comments - maps	Not Stated	Questions the accuracy of mapping for PC1 mapping which does not correspond to submitters experience. Concerned with accuracy of soil type analysis, and suggests modelling is not fit for purpose.	Not stated.
S55 Annette Cairns	S55.003	General comments - maps	Not Stated	Questions the validity of the mapping techniques used to determine erosion prone land.	Not Stated
S94 Jo McCready	S94.002	General comments - maps	Oppose	Considers the maps provided within PC1 difficult to decipher at property level. Concerned with difficulty for landowners to determine how they might be affected.	Not stated.
S98 Urban Edge Planning Group on behalf of Pandion Limited	S98.002	General comments - maps	Not Stated	No submission point stated	Not stated
S169 KORU HOMES NZ LIMITED	S169.047	General comments - maps	Oppose	Opposes Chapter	<p>Withdrawal of PC1 in its entirety to allow for a more comprehensive review of the policy and rule framework as it relates to freshwater management (including stormwater management and earthworks);</p> <p>OR</p> <p>2. Should the relief sought in point 1) not occur, the Submitter seeks the relief set out in submission;</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					AND 3. Any other relief (including consequential relief) to give effect to the decisions sought in submission;
S195 New Zealand Farm Forestry Association (NZFFA)	S195.025	General comments - maps	Oppose	<p>Notes in the 2023 report by Easton Nation and Blyth, Forestry erosion risk is based on potential erosion risk on land currently in forestry should that land be converted to pasture. Consider the measure of erosion risk used is questionable as replanting forestry has a lower erosion risk than converting land to pasture.</p> <p>Considers the mapping resulting from the report by Easton Nation and Blyth is not useful for managing a forest, as it uses 5m by 5 m pixels when forests are managed to the nearest 0.5 ha. Suggests the mapping would have required at least a contiguous size of 0.5 ha for each class of risk to be credible.</p>	Not stated – Remapping is required
S206 Winstone Aggregates	S206.018	General comments – maps	Not Stated Amend	Supports a nuanced approach to high erosion risk land, wherein the PC1 definitions differentiate between vegetation types. However, concerned with the accuracy and quality of the mapping referenced in the definitions.	Review mapping, or remove and the current approach relied on until robust mapping is undertaken.
S206 Winstone Aggregates	S206.019	General comments – maps	Not Stated Amend	Notes there is no definition for "greenfield development", and that the definition for "unplanned greenfield development" simply refers to greenfield development identified in the PC1 maps. Concerned the lack of a definition means any development in the mapped areas is captured as "greenfield development" and the associated rules. Notes conflict between the PC1 maps and district plan maps. Concerned that stormwater discharge from an impervious surface within an operational quarry that is subject to "unplanned greenfield development"	Definition of greenfield development (and unplanned greenfield development) is defined to be specific to urban development and does not capture quarrying activities.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>would be a prohibited activity, noting that it is not possible to avoid all stormwater discharges within a quarry. Concerned the approach to managing greenfield development seeks to manage land use its itself, rather than an effect. Concerned that general rules for earthworks, and the creation of impervious surfaces, without any associated discharges to water, overlap with the jurisdiction of territorial authorities. Considers there is insufficient evidence in the s32 evaluation to support prohibiting unplanned greenfield development in all circumstances. Questions the efficiency and effectiveness of the proposed approach, noting there is no ability for joint territorial and regional plan change processes to be considered under the RMA. Notes the prohibited rules relates to the coastal marine area, therefore requiring final approval from the Minister for Conservation, and that a district plan change would likely be undertaken after a plan change for the NRP, given that it must not be inconsistent with a regional plan. Concerned with the uncertainty and slowness of the private plan change process, and that resource consent would still be required after a plan change, therefore incurring costs and delays.</p>	
S217 R P Mansell; A J Mansell, & M R Mansell	S217.002	General comments - maps	Not Stated	Concerned with the quality and detail of the PC1 maps.	Improve quality/resolution of PC1 maps.
S225 Upper Hutt City Council	S225.001	General comments - maps	Not Stated	In GWRCs data, there are various overlaps and gaps between some of the neighbouring TAs polygons, the submitter suggests that this is likely due to the	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				different TAs using different iterations of the StatsNZ Territorial Authorities layer.	
S225 Upper Hutt City Council	S225.005	General comments - maps	Amend	Not stated	Amend maps to provide more accurate information that is able to be considered at a property scale and compared with publicly available local authority data, particularly in relation to Map 88
S234 David and Pauline Innes	S234.002	General comments - maps	Oppose	<p>Concerned the map system used in Change 1 is not fit for purpose, and streams that have been individually listed in the schedule were merged together in the GIS data. Considers identifying streams by coordinates is an inappropriate level of identification, and each stream should have been shown on a map and identified with reference to features that the reader could identify.</p> <p>Considers the document is difficult to read and is not fit for purpose. Concerned the connections between the policies and the geographic areas are inadequate.</p>	Not stated
S240 Porirua City Council	S240.005	General comments - maps	Not Stated	Considers unplanned greenfield maps are inconsistent with Panel decisions on the Porirua Intensification Planning Instrument. Seeks that if the maps are retained for unplanned greenfield development, Greater Wellington officers engage with Council's planning officers to ensure maps accurately reflect the Hearing Panel's decisions. Otherwise, a policy pathway needs to be provided for the final Future Urban Zoning in Porirua PDP to be subject to Policy P14 and associated rules and methods, rather than Policy P15.	Greater Wellington officers engage with Council's planning officers to ensure maps accurately reflect the Hearing Panel's decisions. Otherwise, a policy pathway is provided for the final Future Urban Zoning in Porirua PDP to be subject to Policy P14 and associated rules and methods, rather than Policy P15.
S248 Ara Poutama Aotearoa the Departmen	S248.004	General comments - maps	Not Stated	Questions the appropriateness of the mapping used to identify where resource consent is required for vegetation clearance, plantation forestry, or earthworks on erosion-prone pasture.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
t of Corrections				<p>Notes the mapping for these features includes numerous small and incohesive areas and submitter questions the efficiency or effectiveness of regulating numerous small (which in many cases measure no greater than 5m by 5m) incohesive areas to manage land stability.</p> <p>Considers maps should be amended to only identify cohesive areas being subject to the rules. In relation to policies, rules, and schedules in relation to plantation forestry, submitter suggests these could be refined to enable plantation forestry operations to continue, particularly where it provides benefits for minimising soil erosion and carbon sequestration.</p> <p>Considers much of Schedule 34 duplicates statutory requirements contained in other documents (particularly the NES-CF) and considers Schedule 34 should be part of a Part 1 Schedule 1 planning instrument, and not part of the freshwater planning instrument.</p>	
S262 Southern North Island Wood Council	S262.004	General comments - maps	Not Stated	<p>Considers there are impracticalities of the current erosion mapping class system. Considers the resolution too low and does not reflect forest scale erosion risk.</p>	Not stated
S262 Southern North Island Wood Council	S262.005	General comments - maps	Not Stated	<p>Considers PC1 poses a significant risk to forest investment in the region. Considers the loss of productive area, often for no major environmental gains, lowers land values, wards off investment and has a direct economic impact on people of the region.</p>	Not stated
S277 Craig Innes	S277.002	General comments - maps	Oppose	<p>Concerned the map system used in Change 1 is not fit for purpose, and streams that have been individually listed</p>	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>in the schedule were merged together in the GIS data. Considers identifying streams by coordinates is an inappropriate level of identification, and each stream should have been shown on a map and identified with reference to features that the reader could identify.</p> <p>Considers the document is difficult to read and is not fit for purpose. Concerned the connections between the policies and the geographic areas are inadequate.</p>	
S2 Horokiwi Quarries Ltd	S2.006	General comments - overall	Amend	Whilst the submitter's concerns pertain to the Whaitua Te Whanganui-a-Tara, to ensure consistency, the submitter supports consistent relief to the Whaitua Te Awarua-o-Porirua Objectives, Policies, and Rules.	Amend relevant provisions in the Whaitua Te Awarua-o-Porirua (Objectives, Policies and Rules), consistent with relief sought in submission points within this submission.
S3 Dougal Morrison	S3.001	General comments - overall	Not Stated	Considers there is no justification for bringing in changes to control forestry use beyond the NES' for Commercial Forestry.	Not stated.
S3 Dougal Morrison	S3.004	General comments - overall	Not Stated	Changes go beyond the recommendations of the relevant Whaitua.	Not stated.
S3 Dougal Morrison	S3.007	General comments - overall	Not Stated	Considers extra resources should be provided to a monitoring team, as per the Te Awarua-o-Porirua and Te Whanganui-a-tara Whaitua recommendations.	Not stated.
S3 Dougal Morrison	S3.008	General comments - overall	Not Stated	Concerned the Section 32 analysis doesn't justify the changes to forestry management rules.	Not stated.
S3 Dougal Morrison	S3.011	General comments - overall	Not Stated	Considers rules need to be appropriate to the type of forest being managed. Considers commercial forests using a continuous forest cover approach should be a permitted activity.	Not stated.
S3 Dougal Morrison	S3.012	General comments - overall	Not Stated	Considers GWRC has not provided scientific evidence that forests have caused any significant degradation of freshwater quality.	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				States GWRC's objectives are broad and it will be difficult to determine whether new regulations for forestry will have a positive effect on water quality. Feels GWRC presents a biased view of the role of forestry in the Section 32 report Considers there is no evidence that more stringent NES-CF will not achieve GWRC's water quality objectives and there is no reason to bring in greater controls than those in the NES-CF.	
S3 Dougal Morrison	S3.013	General comments - overall	Not Stated	References recommendations from Te Awarua-o-Porirua WIP and Te Whanganui-a-Tara WIPs and considers these recommendations have not been followed and more complex and expensive regulations are now proposed.	Not stated.
S3 Dougal Morrison	S3.019	General comments - overall	Not Stated	Supports the New Zealand Farm Forestry Association Inc, and the Wellington Branch of the New Zealand Farm Forestry Associations' submissions.	Not stated.
S9 Louise Askin	S9.001	General comments - overall	Support	Supports the group submission made by Mākara/Ohariu farmers'.	Not Stated.
S9 Louise Askin	S9.002	General comments - overall	Amend	Concerned PC1 detail is very different from WIP and considers requirement for testing through consultation to assess the reflection of community recommendations.	Not Stated.
S9 Louise Askin	S9.003	General comments - overall	Amend	Concerned the partnership approach recommended by WIP has not continued into PC1 delivery process and document. Considers it important for PC1 to prioritise partnership mechanisms, recognise the values and to provide a equitable and effective approach. Considers it important for GWRC actively considers impacts of these provisions on local communities in order to design support.	Not Stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Considers GWRC has not investigated the extent of waterway protection required under the provisions, land retirement (based on lay of the land opposed to mapped polygons) or financial implications for farmers. Concerned the ETS liabilities for not replanting forestry on certain land classes has not been considered.	
S9 Louise Askin	S9.004	General comments - overall	Amend	Considers PC1 should provide catchment context by incorporating whaitua-wide policies and prioritisation tools (e.g. mapping) as non-regulatory support to inform farm plans. Suggests this will result in robust (certified and audited) FWFP but will ensure farms can identify actual issues and solutions for unique landscapes and avoid regulatory "by-catch" from broad rules. Notes the Government's recent changes to the NPS-FM and timeframes for implementation may change the effectiveness of this WIP recommendation.	Not Stated.
S9 Louise Askin	S9.005	General comments - overall	Amend	Notes the Government's recent changes to the NPS-FM and timeframes for implementation may change the effectiveness of this WIP recommendation.	Not Stated.
S9 Louise Askin	S9.006	General comments - overall	Amend	Notes PC1 was prepared swiftly to implement regulatory measures within NPS-FM timeframe and for GWRC's longer-term commitment to non-regulatory measures. Concerned non-regulatory measures outside of PC1 haven't occurred yet. Notes WIP identified fundamental barriers in the geographic areas such as: lack of data on the issue, identification solutions, need for community catchment group support, need for additional funding for	Give non-regulatory measures equal priority to PC1 (including outside of PC1 development process) and apply these measures in areas where regulation will be most prominent

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				on-farm works and a current lack of GWRC's compliance/enforcement of poor practice.	
S16 Pauatahanui Residents Association	S16.003	General comments - overall	Not Stated	Concerns regarding modelling to inform the policies and rules rather than collecting data and 'ground truthing' and then applying appropriate actions	Not stated
S16 Pauatahanui Residents Association	S16.004	General comments - overall	Not Stated	Concerns regarding implementation of the plan, and concerns about the financial and time cost to landowners.	Not stated
S16 Pauatahanui Residents Association	S16.005	General comments - overall	Not Stated	Concerned that poor implementation will penalise those engaging proactively and using good management practices while failing to identify or deal with those engaging in poor management practices.	Not stated
S16 Pauatahanui Residents Association	S16.006	General comments - overall	Not Stated	Considers better outcomes would be achieved if PC1 was weighted in accordance with Recommendations 58, 59, 60, 61 and 64 of Te Awarua-o-Porirua Whaitua Implementation Programme, focusing on resourcing support and actions rather than on enforcement.	Not stated
S17 John Easter	S17.017	General comments - overall	Not Stated	Considers plan change must be amended to include statutory provisions for central and local government funding for retirement of land, land-use changes, certification costs and mitigation measures required to meet objectives.	Not stated.
S17 John Easter	S17.023	General comments - overall	Not Stated	The points in the attached document have been listed as new submission points by GWRC at the beginning of this submission.	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S17 John Easter	S17.024	General comments - overall	Not Stated	References the Rivers Control Act 1941 being a precedent for management of erosion and protecting property from flood damage.	Not stated.
S17 John Easter	S17.029	General comments - overall	Not Stated	Concerned about the time it will take to achieve PC1's long-term goals and that the timeframes and expectations on landowners are unrealistic.	Not stated.
S17 John Easter	S17.030	General comments - overall	Not Stated	Considers PC1 needs to include provisions to address landowners being penalised for use of the land while those with lease agreements (using windfarms as an example) can avoid liability for diverting revenue into reforestation.	Not stated.
S17 John Easter	S17.031	General comments - overall	Not Stated	Considers land use changes that deal with runoff and reducing flood peaks in the Makara/Ohariu catchments will also deliver PC's objectives of reducing silt loads. Concerned PC1's focus on grade and cover of land (and not reducing flood flows) will not reduce transportation of silt.	Not stated.
S22 Lynn Cadenhead	S22.004	General comments - overall	Support	Supports GWRC's Whaitua process, and supports the implementation of the recommendations made by Whaitua members to address freshwater issues.	Not stated.
S22 Lynn Cadenhead	S22.005	General comments - overall	Support	Supports the direction of PC1 with regard to water.	Not stated.
S25 Robin Chesterfield	S25.001	General comments - overall	Not Stated	Supports the National New Zealand Farm Forestry Association and the Wellington branch of the New Zealand Farm Forestry Association Submissions	Not stated
S25 Robin Chesterfield	S25.002	General comments - overall	Not Stated	Concerned rules governing forestry in PC1 would render interest in land incapable of reasonable use	Not stated
S26 Christine Stanley	S26.003	General comments - overall	Not Stated	Concerns with the ability of PC1 to achieve the desired outcomes	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S26 Christine Stanley	S26.004	General comments - overall	Not Stated	Concerns with GWRC's ability to monitor, manage or respond to pollution	Not stated
S26 Christine Stanley	S26.006	General comments - overall	Not Stated	Concerned about how titles which are part of rotational grazing or regenerative farming will be interpreted when completing the registration forms for farms smaller than 4 hectares	Not stated
S26 Christine Stanley	S26.007	General comments - overall	Amend	Supports Porirua City Council's submissions regarding the need for a digital format similar to those of ePlans. Recommends converting the format to improve efficiency, regulatory compliance and reduced costs for users.	Convert to eplan format
S28 Jonny Osborne	S28.001	General comments - overall	Not Stated	The submitter supports the direction in Plan Change 1.	Councillors to continue to support these changes through to their implementation.
S28 Jonny Osborne	S28.002	General comments - overall	Not Stated	Considers addressing matters like aging and leaky infrastructure, inappropriate urban development and poor land use practices takes a strong (and enforced) regulatory backbone.	Not stated
S28 Jonny Osborne	S28.003	General comments - overall	Not Stated	Supports measures that will end harmful wastewater entering directly into streams and coastal waters, water sensitive urban design implemented as the norm across the region, and rural and forestry practices improved so they no longer harm waterways and the wildlife.	Not stated
S28 Jonny Osborne	S28.004	General comments - overall	Not Stated	Considers the changes will be expensive but that rates cannot continue to be raised and the regulations should not be watered down. Supports the timeframes for achieving the target attribute states set out in Plan Change 1.	Not stated
S28 Jonny Osborne	S28.005	General comments - overall	Not Stated	The submitter considers the costs of inaction outweigh those of action, and ultimately those costs fall on future generations.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S29 Neil Deans	S29.001	General comments - overall	Support	Supports GWRC's Whaitua process, and supports the implementation of the recommendations made by Whaitua members to address freshwater issues.	Not stated.
S30 Dean Spicer	S30.002	General comments - overall	Not Stated	Considers PC1 is inconsistent with UHCC PC50, highlighting lack of due process of PC1.	Withdraw PC1 and conduct appropriate consultation and engagement.
S30 Dean Spicer	S30.004	General comments - overall	Not Stated	Considers PC1 contains drafting errors and fails to define key terms. Considers stakeholders have been prevented from understanding what is proposed which has impacted their ability to make well informed submissions.	PC1 redrafted correctly and resubmitted for consultation.
S33 Wellington City Council	S33.001	General comments - overall	Not Stated	WCC has practical constraints in managing it's three waters network. Funding constraints will make it difficult to achieve significant improvements quickly, and the target attribute timeframe of 2040 is unlikely to be practicably achievable. Considers a 2060 target is more realistic but this would also be challenging to achieve due to financial constraints and limited capacity within the infrastructure sector to deliver upgrades.	Not stated
S34 John Hill	S34.001	General comments - overall	Support	Legislation or council directions must be clear and precise.	Legislation or council directions must be clear and precise.
S34 John Hill	S34.002	General comments - overall	Support	The plan change should not be able to be misinterpreted or used to support the ideology of any member or group within GWRC	Plan change should not be able to be misinterpreted or used to support the ideology of any member or group within GWRC
S34 John Hill	S34.003	General comments - overall	Support	An independent commissioner should be available to manage misuse or interpretation of rules.	Seeks access to a commissioner where situations outlined in submission occur.
S35 Amos Mann	S35.006	General comments - overall	Not Stated	Encourages councils to resource enforcement, science, and policy tools like education, industrial water plans, iwi and community governance, and citizen water-care activity.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.001	General comments - overall	Not Stated	Supports submission from the national body of NZFFA.	Not stated
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.005	General comments - overall	Not Stated	Notes the proposed approach to prohibit production forestry from 10% of the steepest forestry land is based on catchment modelling, on the assumption that the steepest land delivers the most sediment to waterways via landslides. Concerned this approach is not based on objective evidence, does not consider other sources of sediment, and the approach is inconsistent with forestry best practice guidelines and scientific literature on forestry erosion.	Not stated
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.012	General comments - overall	Not Stated	Concerned PC1 lacks input from experienced soil conservators and questions why they were not consulted. Considers a tunnel-view solution is proposed for a problem that may not exist.	Rather than prohibit Plantation Forestry from the steepest slopes, explore other ways of mitigating the risk of erosion from steep slopes after harvesting.
S39 Fenaughty Partnership - Riu Huna Farm	S39.002	General comments - overall	Not Stated	Suggests GWRC take an approach of partnership and consulting with the community to achieve water quality outcomes. Concerned GWRC's community engagement for PC1 was lacking, with a GWRC presentation organised less than three weeks before submissions closed. Questions why affected parties did not have direct mail contact from GWRC regarding PC1 and why there was no	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>formal agreement from the community board.</p> <p>Concerned PC1 information on GWRC website was not easily accessible and in relevant form.</p> <p>Considers GWRC 90-minute workshop was insufficient to provide information required for community to make informed decisions.</p> <p>Considers the timing of the consultation was unworkable as it was several weeks before Christmas and during a very busy farming season.</p>	
S39 Fenaughty Partnership - Riu Huna Farm	S39.006	General comments - overall	Not Stated	<p>Considers the perceived problems are not clearly articulated or supported and that solutions are best achieved by bespoke on-farm and by individual property solutions</p> <p>Concerned that small streams cross multiple property boundaries, suggesting that a better approach for implementing and monitoring is required.</p>	Not stated.
S39 Fenaughty Partnership - Riu Huna Farm	S39.007	General comments - overall	Not Stated	<p>Concerned of required financial and time costs for implementing the proposed changes and the significant impact on the viability of their enterprise.</p> <p>Concerned many people will be non-compliant with the proposed changes in a short timeframe and will therefore face prosecution.</p> <p>Concerned the proposed time to transition between current land use and implementing the proposed changes is unrealistic and does not account for significant financial implications, required changes in the farm systems and potential changes in land use.</p> <p>Considers PC1 measures assume worst-case scenario in water quality and do not account for any historical improvements carried out.</p>	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Considers cost of implementing proposed changes will significantly affect farming enterprise, assuming requirement of farm plan and 'expert' verification will be high financially and in time allocated. Concerned PCI does not allow flexibility to prioritise or progressively stage work over time.	
S40 Pamela Govan	S40.002	General comments - overall	Not Stated	Supports the objectives for Te Whanganui a Tara and Te Awarua o Porirua.	Not stated.
S40 Pamela Govan	S40.005	General comments - overall	Not Stated	Encourages councils to resource enforcement, science and complementary policy tools (education, industrial water plans and community governance) and the continued involvement of mana whenua and citizen water-care activity.	Not stated.
S42 Maryanne Gill	S42.001	General comments - overall	Oppose	Concerned the submitter's farm is in jeopardy from PC1 policies. Considers restrictions are excessive and go beyond GWRC's mandates to "clean up" waterways. Concerned legal battles will occur due to deprivation of property rights from PC1. Notes the stress and pressure on farmers is already disproportionately high.	Not stated.
S42 Maryanne Gill	S42.002	General comments - overall	Oppose	Considers the plan severely restricts farmers and farming practices and is the reason why so many people are continually "giving up " farming. Considers Makara is already an example of this. Concerned of difficulty to meet regulations relating to farming and land use. Concerned animals cant get water because of alleged "stream contamination.	Not stated.
S42 Maryanne Gill	S42.008	General comments - overall	Oppose	Strongly opposes PC1 and the removal of community decision making. Agrees with the need to improve poor water quality where it is poor and where the solutions are within submitters control.	Recognise the work that submitter has done and partner and work with landowners rather than regulating against them.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Considers fundamental evidence is required to do this effectively and equitably. Requests GWRC to recognise the work that has been done and ask GWRC to partner and work with landowners rather than regulating against.	
S43 Fulton Hogan Ltd	S43.001	General comments - overall	Amend	Seeks consistency in definitions and plan provisions.	Not stated
S43 Fulton Hogan Ltd	S43.002	General comments - overall	Amend	Supports the improvement of water quality and ecosystem outcomes through PC1, but concerned some parts of PC1 go too far and do not provide sufficient flexibility for day-to-day activities without resource consent.	Not stated
S45 Heather Blissett	S45.001	General comments - overall	Not Stated	Requests the word "resource" be changed to "taonga" as the term resource implies something to be used as people see fit for financial gain.	Requests the word " resource " be changed to " taonga " as the term resource implies something to be used as people see fit for financial gain.
S45 Heather Blissett	S45.002	General comments - overall	Not Stated	Requests mauri be added to restoring statements to reflect that we are restoring the mauri of the water (life energy).	Requests mauri be added to restoring statements to reflect restoring the mauri of the water (life energy).
S45 Heather Blissett	S45.003	General comments - overall	Not Stated	Considers 2050 is not a reasonable date in the absence of any other date as water systems do not have that long (references Pg. 15)	Not stated
S45 Heather Blissett	S45.005	General comments - overall	Not Stated	Concerned the plan contains the right words and drawn-out action plans which won't prevent Te Awakairangi and Peatland dying along with the tributaries.	Not stated
S47 Richard Swan	S47.001	General comments - overall	Not Stated	Supports full submissions from National New Zealand Farm Forestry Associated and Wellington branch New Zealand Farm Forestry Association.	Not stated
S47 Richard Swan	S47.003	General comments - overall	Not Stated	Considers proposed rules governing forestry in PC1 would render land incapable of reasonable use. Challenges these rules in accordance with s85 RMA.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S48 Alan Bell & Associates	S48.001	General comments - overall	Not Stated	Supports the Wellington Branch of the New Zealand Farm Forestry Associations submission.	Recommend that GWRC take notice of the information presented in the NZFFAW submission.
S49 Hamish Levak	S49.001	General comments - overall	Not Stated	Supports the New Zealand Farm Forestry Association Inc, and the Wellington Branch of the New Zealand Farm Forestry Associations' submissions.	Not stated
S49 Hamish Levak	S49.002	General comments - overall	Not Stated	Concern that proposed rules governing forestry in Plan Change 1 would render their forestry interests incapable of reasonable use, and challenges the rule under Section 85 of the RMA.	Not stated
S51 Mākara and Ohariu large farms	S51.001	General comments - overall	Not Stated	Supports individual submissions made by other members of the Mākara/Ohariu community. Does not support PC1 in its current form, noting that feedback on PC1 is similar to that provided in the Whaitua process. Notes work undertaken by the community to improve water quality and biodiversity, including retiring coastal and steep land; and revegetation of wetlands, streams and hillsides.	Not stated.
S51 Mākara and Ohariu large farms	S51.005	General comments - overall	Not Stated	Concerned with how short the timeframes for implementation of PC1 are given the financial implications.	Revise the approach in PC1 to be more focused on community participation than regulation.
S52 Jeremy Collyns	S52.001	General comments - overall	Not Stated	Supports submissions from National New Zealand Farm Forestry Association and Wellington branch of the New Zealand Farm Forestry Association	Not stated
S52 Jeremy Collyns	S52.003	General comments - overall	Oppose	Concerned rules governing forestry in PC1 would render interest in land incapable of reasonable use	Not stated
S54 Peter Kiernan	S54.001	General comments - overall	Not Stated	Supports the New Zealand Farm Forestry Association Inc, and the New Zealand	Not stated

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S90 Upper Hutt Rural Communities - Peter Jeffery Hutson	S90.007	General comments - overall	Not Stated	Identifies drafting errors in PC1 that alter the intended meanings of sections and render the second paragraph meaningless.	Subject PC1 to further editing
S91 Upper Hutt Rural Communities - Graeme Shellard	S91.005	General comments - overall	Not Stated	Questions whether staff have been advised of the inclusion of the statement that all rules in PC1 will have immediate legal effect as they meet the requirements of section 86B. Concerned about differing requirements for riparian margins outlined in PC1 and supporting information for PC1.	Delete the 'immediate legal effect' statement in the Section 32 report to indicate that PC1 rules will attain legal effect upon PC1 becoming fully operative.
S91 Upper Hutt Rural Communities - Graeme Shellard	S91.007	General comments - overall	Not Stated	Identifies drafting errors in PC1 that alter the intended meanings of sections and render the second paragraph meaningless.	Subject PC1 to further editing
S92 Callum Forbes	S92.001	General comments - overall	Oppose	Expressed concern with lack of consultation with rural communities. Supports submissions made by Mangaroa and Akatarawa residents.	Withdraw PC1 in full
S94 Jo McCready	S94.003	General comments - overall	Oppose	Considers heavy reliance on modelling to inform the policies and rules rather than emphasising collection of reliable data and applying appropriate actions.	Not stated.
S94 Jo McCready	S94.005	General comments - overall	Oppose	Considers lack of information on support resourcing, including monitoring the implementation of PC1, means it is likely to potentially penalise those engaging proactively and using good management practices while failing to identify or deal with those engaging in poor management practices unless there are very blatant breaches.	Not stated.
S94 Jo McCready	S94.006	General comments - overall	Oppose	Considers overall emphasis within PC1 is on regulatory methods and "requirements" on landowners rather than incentives to	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				engage best practice. Considers better outcomes would be achieved weighted in accordance with Recommendations 58, 59, 60, 61 and 64 of Te Awarua-o-Porirua Whaitua Implementation Programme. Considers focusing on resourcing positive supports and actions rather than enforcements.	
S98 Urban Edge Planning Group on behalf of Pandion Limited	S98.001	General comments - overall	Not Stated	No submission point stated	Not stated
S99 Simon Wright	S99.001	General comments - overall	Support	Supports PC1 and the rules and incentives that will make development more sustainable. PC1 will not just help address environmental challenges but will inspire innovation with unexpected social and economic benefits that may have impacts beyond the Wellington region. Considers it is unacceptable to allow developments that pollute the water or degrade the land, or for associated costs to be socialised and/or passed on to future generations.	Not stated
S99 Simon Wright	S99.002	General comments - overall	Support	Important that compliance is achieved and that monitoring for impacts and outcomes occurs. Compliance teams will need to be adequately resourced.	Not stated
S99 Simon Wright	S99.003	General comments - overall	Support	Suggests the use of participatory approaches that encourage and support members of the public to contribute. This might be through the education system, citizens science, participatory evaluation or re-purposed Whaitua committees.	Not stated
S100 Julian Bateson	S100.001	General comments - overall	Not Stated	Supports the New Zealand Farm Forestry Association Inc, and the Wellington	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Branch of the New Zealand Farm Forestry Associations' submissions.	
S101 Wellington International Airport Limited	S101.009	General comments - overall	Amend	Considers as notified, the Proposed NRP was unduly complex and difficult to follow. Considers the numbering of the schedules used in the Proposed NRP also gives rise to potential confusion. Submitter assumes that Schedules A to Z will be renumbered 1 to 26, or Schedules 27 to 34 will be alphanumerically numbered. Opposes the schedules to the extent that it is not clear what comprises Schedules 1 to 26.	Issue a tracked change version of the Proposed NRP, both electronic and hard copy, prior to any directions requiring the preparation of s42A reports and evidence to ensure that it is clear which provisions are changing, where and how they sit within the wider context of the Operative NRP. This should include, as anticipated by the New Zealand Planning Standards, appropriate links to cross reference rules or provisions, or other documents. Reformat to provide appropriate links and a contents page.
S101 Wellington International Airport Limited	S101.010	General comments - overall	Oppose	Considers that in the absence of amendments to the Proposed NRP to address and give effect to the submission, the Proposal will not promote the sustainable management or efficient use and development of natural and physical resources, is not the most appropriate way to achieve the purpose of the RMA, particularly when having regard to the efficiency and effectiveness of the provisions relative to other means, and does not appropriately fulfil the requirements of section 32 of the RMA, particularly in terms of evaluation the costs of implementing the provisions under section 32(2)(a); Considers the Proposal does not represent sound resource management practice particularly with respect to planning for Wellington Airport, as regionally significant infrastructure.	That the submission points contained in this submission be accepted, or that the Proposed NRP be amended in a similar or such other way as may be appropriate to address the submission points; and Any alternative, consequential changes (including to objectives, policies, methods and anticipated environmental results or other provisions), amendments or decisions that may be required to give effect to the matters raised in the submission. Where any submission point seeks to amend a provision, should that relief not be granted, delete that provision and revert to the Operative NRP.
S107 Friends of Waipāhihi Karori Stream	S107.001	General comments - overall	Support	Supports the direction of PC1. Considers that strong implementation and enforcement of regulation is necessary to address aging infrastructure, inappropriate urban development and poor land use practices.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S107 Friends of Waipāhihi Karori Stream	S107.009	General comments - overall	Not Stated	Considers councils need to prioritise better to focus on the basics and new sources of funding can be found with the right leadership.	Not stated
S107 Friends of Waipāhihi Karori Stream	S107.010	General comments - overall	Support	Supports the Whaitua process and moves to implement the recommendations of Whaitua committee members and mana whenua.	Not stated
S111 Forest Enterprises	S111.001	General comments - overall	Oppose	Supports submissions of China National Forestry Group, John Turkington Limited, NZ Farm Forestry Association and Juken New Zealand Limited	Not stated
S111 Forest Enterprises	S111.002	General comments - overall	Oppose	Considers Rules WH.R17 to WH.R22 and Rules P.R16 to P.R21 neglect to acknowledge the precedence of the National Environmental Standards of Plantation Forestry (NESPF) and National Environmental Standards of Commercial Forestry (NESCF). NESCF recognises need for flexibility to protect sensitive local environments and notes Regional and District Councils can be more stringent or more lenient but needs to be based on assessments of science and encompasses all environmental, social, and economic factors including those already in place.	Not stated
S111 Forest Enterprises	S111.007	General comments - overall	Oppose	Considers NES-CF has rules and controls for the winter earthworks shutdown period and already manages effects. Considers a requirement for greater stringency has not been demonstrated.	Not stated
S111 Forest Enterprises	S111.009	General comments - overall	Oppose	Considers environmental outcomes Te-Awarua-o-Porirua and Te-Whanganui-a-Tara have recommended are not reflected by the proposed NRP rules. Considers oversimplifying slope and not	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>factoring forestry activities, yet proposing rules on this basis, is scientifically and logically inconsistent.</p> <p>Considers whitua recommendations consistent with the National Environmental Standards of Commercial Forestry and provides the site-specific assessments needed.</p> <p>Submitter invite GWRC to consult with forestry industry and evaluate level of stringency that NESCF already provides.</p>	
S113 Zealandia Te Māra a Tāne	S113.001	General comments - overall	Support	<p>Supports the intent to stop further degradation of freshwater bodies in the Wellington region.</p> <p>Supports the collaborative planning process involving Whitua committees.</p>	Not stated
S113 Zealandia Te Māra a Tāne	S113.002	General comments - overall	Not Stated	<p>Advocates for the implementation of the proposed changes in the timeframes proposed to ensure that Wellington continues to be an exemplar of urban biodiversity management and further degradation of freshwater is halted.</p>	Not stated
S114 Michael Marfell- Jones	S114.002	General comments - overall	Oppose	<p>Questions the legality of the process undertaken by GWRC as "regulation by fiat", citing recent Environment Court decisions.</p>	Delete provisions that have not been informed through consultation [inferred]
S114 Michael Marfell- Jones	S114.003	General comments - overall	Oppose	<p>Expressed concern that some rules have immediate legal effect when consultation or on-site inspections have taken place, and that this may result in unknown or retrospective non-compliances.</p>	Remove requirement for all rules to have immediate legal effect. Insert text which states "all rules in this plan change will be held in abeyance pending the plan change passing through all stages required by the RMA."
S115 Mary Hutchinso n	S115.001	General comments - overall	Support	<p>Supports PC1, particularly the whitua process for Te Whanganui-a-Tara and Te Awarua-o-Porirua. Considers that PC1 should be integrated with the related functions and initiatives of other statutory authorities.</p>	Retain PC1 as notified (inferred)

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S118 Wayne Robert Pettersson and Maureen Pettersson	S118.001	General comments - overall	Not Stated	Considers language used in Whāita The Whanganui-a-Tara and the ___14 Avarua-o-Porirua Whāita documents is difficult to understand.	Not stated.
S118 Wayne Robert Pettersson and Maureen Pettersson	S118.003	General comments - overall	Not Stated	Considers the problems leading to the plan change result from large intensive farming and logging operations carried out within catchment areas not small blocks.	Not stated.
S118 Wayne Robert Pettersson and Maureen Pettersson	S118.004	General comments - overall	Not Stated	Considers the stream on personal property has not had any erosion problems.	Not stated.
S118 Wayne Robert Pettersson and Maureen Pettersson	S118.005	General comments - overall	Not Stated	Concerned about costs and practicalities of having to fence off streams.	Not stated.
S118 Wayne Robert Pettersson and Maureen Pettersson	S118.006	General comments - overall	Not Stated	Submitter strongly opposes PC1.	Suggests GW provide financial help for fencing, water troughs, pipe and fittings and a water tank. Suggests GW be responsible for maintenance of the fenced off stream area.
S119 Susan Sturman	S119.002	General comments - overall	Not Stated	Considers that fines should be enforced for contaminant discharges. Concerned about the goals and timeframes set. Suggests small, achievable, and measurable goals should	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>be the focus and then assess the value provided and use feedback and innovation to continuously improve interventions.</p> <p>Considers that restoring water quality, preventing flooding, and protecting water supply is critical for council to fund and manage. Encourages councils to collectively resource enforcement, science, and complementary policy tools like education, industrial water plans, community governance, and citizen water-care activity.</p>	
S120 Akatarawa Valley Residents - John Van Nortwick & Jill Van Nortwick	S120.001	General comments - overall	Oppose	Supports the intention for quality regarding freshwater and ecosystems but seeks an evidence-based approach that supports targeted strategies tailored for particular eco systems and environments. Considers that PC1 fails to provide sufficient evidence or appropriate targeting to rationalise its implementation and would render their land incapable of reasonable use (per section 85 of RMA), especially for those landowners who have yet to build on their property.	Stop the PC1 process immediately and engage with the affected communities using a proper and meaningful consultation process once government direction is clear.
S120 Akatarawa Valley Residents - John Van Nortwick & Jill Van Nortwick	S120.007	General comments - overall	Oppose	Notes that residents deal with incursion of pest species onto their land from GWRC land and seeks GWRC manage pests on their own land. Notes that pest species adversely impact socking levels and prevent landowners from increasing indigenous biodiversity.	No decision requested –GWRC to actively manage the pests on GWRC land that borders the Akatarawa Valley and review its practices regarding the management of its land particularly forestry.
S121 Akatarawa Valley Residents - Karen	S121.001	General comments - overall	Oppose	Supports the intention for quality regarding freshwater and ecosystems but seeks an evidence-based approach that supports targeted strategies tailored for particular eco systems and environments.	Stop the PC1 process immediately and engage with the affected communities using a proper and meaningful consultation process once government direction is clear.

S151 Wellington Water Ltd	S151.014	General comments - overall	Amend	Where a position has not been expressed, and no alternative, additional or consequential changes have been sought to address an issue, the stormwater and wastewater provisions are supported as notified	Not stated
S151 Wellington Water Ltd	S151.183	General comments - overall	Amend	Considers more specific objective and policy support is required in PC1 to ensure that the NRP gives effect to aspects of national and regional policy direction, and for consistency with Objective O10 of the NRP, specifically in relation to wastewater infrastructure. Considers policies should recognise that robust, cost-effective, and efficient wastewater and stormwater networks are essential to human health, human safety and social and cultural well-being. Refers to comments in Section A of submission.	Amend existing objective O9 as follows: The social, economic, cultural and environmental benefits of Regionally Significant Infrastructure, renewable energy generation activities and the utilisation of mineral resources are recognized and provided for . Reinstate and alter existing O6 as follows: The social, economic, cultural and environmental benefits of: Taking and using water are recognized managing stormwater for the safety of people and property disposing of wastewater to achieve public health outcomes are recognized and provided for when managing water. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

S175 Tracy Simms	S175.002	General comments - overall	Oppose	Questions how provisions can be applied to properties both upstream and downstream where there are very few monitoring sites.	Withdraw the Plan Change
S176 Te Awarua o Porirua Harbour and Catchments Community Trust & Guardians of Pāuatāhanui Inlet	S176.001	General comments - overall	Support	Submitter supports incorporating the appropriate Whaitua Committee's recommendations into PC1 to the NRP as proposed.	Seeks PC1 should address issues to restore degraded and degrading ecosystems. Integrate PC1 with the related functions and initiatives from the respective statutory agencies, including GWRC, Porirua and Wellington City Councils and Wellington Water as current water managers.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S176 Te Awarua o Porirua Harbour and Catchments Community Trust & Guardians of Pāuatahanui Inlet	S176.005	General comments - overall	Amend	<p>Considers there needs to be a focus on key contributors to contaminant loading in the harbour, including sedimentation, nitrogen, phosphorus, and bacterial (E. coli), and there is a need for urgent actions to address these environmental stressors that are driving degradation of waterbodies and harbour.</p> <p>Considers an approach to prioritise actions to improve ecosystem health can be modelled to ensure the key actions are prioritised and an evaluation can be made for potential improvements in estuary health arising from diversion of wastewater from an estuary, and estimating catchment diffuse nutrient load reductions required to meet estuary health objectives. Considers a focus on key contributors could provide potential leverage to increase the prioritisation of central government funding for cleaning up water bodies by highlighting the urgency of action.</p> <p>Considers a do-nothing approach is not an option and references the extent and health of eel grass (<i>Zostera muelleri</i>) beds has been reduced over many decades in Porirua Harbour, and sediment inputs into waterways from earthworks from new urban development (subdivision), land use, and forestry must be avoided or tightly controlled to allow freshwater and coastal receiving environments to be restored to a state of health and wellbeing.</p> <p>Considers rules and methods should focus on avoiding activities which contribute the most sediment from construction, subdivision development and forestry as the effects of these</p>	Suggests that PC1 policies related to stormwater discharge require demonstration of a functional need for that activity, and if there is a functional need, then the effects management hierarchy must be applied.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>activities are seldom mitigated and never remedied. Considers the policies governing adverse effects of stormwater discharges (e.g., Policy P.P10, Policy WH. P10) contain clauses giving reasons to not put good management practices into effect. This is not supported in current form.</p> <p>When discussing adverse environmental impacts of stormwater or wastewater discharges, it is also required to actively consider ecosystem health - this requires a demonstration of a functional need for that activity, and if there is a functional need, then the effects management hierarchy must be applied. This should be referred to in the PC1 GWRC NRP.</p>	
S176 Te Awarua o Porirua Harbour and Catchments Community Trust & Guardians of Pāuatahanui Inlet	S176.008	General comments - overall	Not Stated	Expects the implementation of actions that result from plan changes will be appropriately resourced and funded.	Not stated.
S177 Transpower New Zealand Limited	S177.002	General comments - overall	Not Stated	The submitter recognises the objectives and policies of the RRPS and NRP for regionally significant infrastructure will continue to apply under PC1. Considers it is not evident from the provisions of PC1, or s32 Report, that consideration has been given to providing for the RPS and NRP objectives and policies related to	Ensure that higher-order direction on regionally significant infrastructure continues to be provided for through PC1 while also giving effect to the NPS-FM.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				regionally significant infrastructure when developing provisions for the whaitua.	
S178 Eugene Doyle	S178.001	General comments - overall	Support	Supports PC1	Not stated
S178 Eugene Doyle	S178.002	General comments - overall	Support	Supports PC1 but to be successful the Plan needs to be integrated with functions and initiatives of other statutory authorities and effective community engagement	Not stated
S178 Eugene Doyle	S178.003	General comments - overall	Support	Supports the submissions of Neil Deans and Lynn Cadenhead in full	Not stated
S178 Eugene Doyle	S178.006	General comments - overall	Not Stated	Supports ongoing collaboration work with local communities and other groups	Not stated
S179 John Coveney	S179.001	General comments - overall	Not Stated	Considers regional bodies are overregulating.	Not stated
S181 John Boyle	S181.001	General comments - overall	Not Stated	Supports the Maymorn Collective submission in full	Not stated
S181 John Boyle	S181.002	General comments - overall	Oppose	Opposes Plan Change 1	Not stated
S181 John Boyle	S181.006	General comments - overall	Amend	Concerns with the drafting errors and failure to define key terms in PC1	PC1 is redrafted correctly and resubmitted for consultation.
S181 John Boyle	S181.007	General comments - overall	Not Stated	Suggests PC1 is inconsistent with the incoming Government's 2023 election platform related to unlocking land for housing	Any decision that prohibits the ability to unlock land for housing as proposed by PC1 should be revised
S181 John Boyle	S181.008	General comments - overall	Not Stated	Notes an absence of detail in PC1 around GWRC managed land.	Not stated
S182 Susan Boyle	S182.001	General comments - overall	Not Stated	Agrees with the Maymorn Collective submission in all aspects	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S182 Susan Boyle	S182.002	General comments - overall	Oppose	Opposed to the proposed Plan Change 1.	Not stated
S182 Susan Boyle	S182.006	General comments - overall	Not Stated	Concerned PC1 contains many errors and fails to define what some key terms mean, preventing stakeholders from understanding what is proposed, and make well informed submissions.	PC1 is redrafted correctly and resubmitted for consultation.
S182 Susan Boyle	S182.007	General comments - overall	Not Stated	Concerned PC1 is inconsistent with the incoming Government's 2023 election platform, specifically that major towns and cities will be required to zone land for '30 years' worth of housing demand immediately.	Any decision that prohibits the ability to unlock land for housing as proposed by PC1 should be revised, to consider, the directive of Central Government policy initiatives, such as changes to the Resource Management Act.
S183 Yvonne Weeber	S183.001	General comments - overall	Support	Supports the direction of PC1	Not stated
S184 David Bennett & Jenni LeanDavid and Jenni Bennett and Lean	S184.001	General comments - overall	Not Stated	Supports the submissions of the New Zealand Farm Forestry Association Inc, and the Wellington Branch of the New Zealand Farm Forestry Association.	Not stated
S185 Ray Beentjes	S185.003	General comments - overall	Support	Supports PC1 and the initiatives to introduce to improve water quality in the catchment.	Requests that GWRC initiatives are carried through to the operative plan, particularly where they protect and restore ecosystem health, contact recreation values, natural form and character, and amenity.
S186 Guardians of the Bays Inc	S186.001	General comments - overall	Support	Supports the direction of Plan Change 1.	Not stated
S187 Victoria University Canoe Club	S187.003	General comments - overall	Support	Supports PC1 and the initiatives to improve water quality in the catchment.	Requests that GWRC initiatives are carried through to the operative plan, particularly where they protect and restore ecosystem health, contact recreation values, natural form and character, and amenity.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S188 Wellington Fish and Game Regional Council	S188.001	General comments - overall	Support	Seeks environmental outcomes set for the ecosystem health value	Seeks environmental outcomes set for the ecosystem health value
S188 Wellington Fish and Game Regional Council	S188.005	General comments - overall	Not Stated	Suggests regular assessments and evaluations of Schedule I important to trout spawning and trout fishery rivers.	Not stated
S189 SAMUEL KAHUI	S189.002	General comments - overall	Support	Supports the direction in PC1 and urges Councillors to continue to support these changes through to their implementation. Considers PC1 must solve some of the biggest problems including aging and leaky infrastructure, inappropriate urban development and poor land use practices and a strong and enforced regulatory backbone is required.	Not stated
S191 Juken New Zealand	S191.001	General comments - overall	Not Stated	Concerns about: The extension of controls beyond the recommendations of the Whaitua committee WIP reports. No consideration for ETS implications with the removal of land from production. Inadequate Section 32 analysis Deficient application of NES-CF Regulation 6 for enforcing more stringent rules. Impracticalities of the erosion mapping and definition of high erosion.	Not stated
S191 Juken New Zealand	S191.002	General comments - overall	Not Stated	Supports the submissions of China National Forestry group, John Turkington Ltd and Forest Enterprises Ltd.	Not stated
S193 Wairarapa Federated Farmers	S193.001	General comments - overall	Support	Generally agrees with the long-term overarching objectives for both whaitua. Considers 2100 is a realistic timeframe for those objectives, as many of the target attribute states (TASs) will take multiple	Not Stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				generations and much planning and investment to achieve	
S193 Wairarapa Federated Farmers	S193.002	General comments - overall	Not Stated	<p>Considers quality data is needed to inform models that are free of uncertainty and error to the extent that they can be used to underpin policies that drive system change.</p> <p>Concerned that model outputs used for PC1 are inadequate for this purpose. Considers insufficient effort was put into ground-truthing the modelled data for PC1, and this should be a focus for the Council before some policies and rules can be proposed.</p>	Not Stated
S193 Wairarapa Federated Farmers	S193.005	General comments - overall	Not Stated	Considers the Council could be an "exemplar" on its own land in partnering with landowners and rural communities to get the smart data needed to inform cost-effective policies that will achieve its long-term objectives.	Not Stated
S195 New Zealand Farm Forestry Association (NZFFA)	S195.002	General comments - overall	Not Stated Oppose	Considers PC1 is not necessary or desirable.	Not stated
S195 New Zealand Farm Forestry Association (NZFFA)	S195.003	General comments - overall	Amend	<p>Consider PC1 and S32 report do not meet requirements of S82(1)(a) of the Local Government Act 2002 .</p> <p>Considers members lack sufficient knowledge of Māori to understand parts of the documents.</p>	<p>Define more terms so there is less confusion and ambiguity.</p> <p>Translate Māori words into English, or have an English language version.</p>
S195 New Zealand Farm Forestry	S195.007	General comments - overall	Oppose	Considers the PC1 process has been rushed creating problems for those affected. Examples provided are as follows:	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Association (NZFFA)				<p>Considers PC1 references and contains outdated definitions and regulations from the NES-PF despite this being superseded by the NES-CF regulations. Due to this, submitter considers it impossible to discern the actual meaning of the proposed new Plan.</p> <p>Considers the council's decision to make a submission to fix the missing controls on replanting included in the Section 32 report would be a significant departure from the publicly available intentions and is concerned that others may have made submissions had they known things were subject to change.</p> <p>Considers Council have rejected recommendations from Te Awarua-o-Porirua WIP and Te Whanganui-a-Tara WIP for better enforcement of compliance and are undertaking a process that is complex, costly and addressing a problem has not been established with regulations that are unnecessary. It would be more cost effective to perform its role under the national standard.</p>	
S195 New Zealand Farm Forestry Association (NZFFA)	S195.027	General comments - overall	Not Stated	Where they are not in conflict with this submission, supports the submissions from New Zealand Farm Forestry association - Wellington Branch, New Zealand Carbon Farming Group, Forest Enterprises, China National Forestry Group, John Turkington Limited and Juken New Zealand Limited.	Not stated
S195 New Zealand Farm Forestry Association (NZFFA)	S195.028	General comments - overall	Not Stated Oppose	Considers PC1 needs to be rethought if it is to be effective in controlling the continued degradation of water quality in the region and helping improve the NRP.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S196 Sera Moran	S196.001	General comments - overall	Oppose	Opposes PC1.	Withdraw PC1.
S197 Greg Davies	S197.001	General comments - overall	Not Stated	<p>Submitter values the water quality values of the following areas for contact recreation and ecosystem health:</p> <ul style="list-style-type: none"> i. Te Awakairangi / the Hutt River ii. Akatarawa River iii. Whakatikei River iv. Titahi Bay v. Lyall Bay vi. Otaki River <p>Considers the natural form and character of these waterbodies is an important part of their value. Natural form and character creates rapids and other features of these sections of river that make them valuable for kayaking.</p> <p>Considers Te Awakairangi / the Hutt Gorge is an outstanding run for whitewater kayaking, which traverses what they consider to be an outstanding landscape with outstanding amenity values</p> <p>Considers the natural and wildlife values of these areas important.</p>	Requests the outstanding value of this section [Te Awakairangi / the Hutt Gorge] of river recognised in the plan.
S197 Greg Davies	S197.003	General comments - overall	Support	Supports PC1 and the initiatives to improve water quality in catchments.	Requests that GWRC initiatives are carried through to the operative plan, particularly where they protect and restore ecosystem health, contact recreation values, natural form and character, and amenity.
S198 Wayne Bettjeman	S198.001	General comments - overall	Not Stated	Supports the submissions of the New Zealand Farm Forestry Association Inc, and the Wellington Branch of the New Zealand Farm Forestry Association.	Not Stated
S199 Pikarere Farm Limited	S199.001	General comments - overall	Not Stated	Considers the Plan is complicated and difficult to follow and the time to get to grips with it has been limited. Questions if the approach of PC1 is right,	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

				and notes that properties can vary greatly with steeper hill areas no more prone to erosion or run-off than valley floors. Is a party to the Ohariu/Makara Farmers' Submission and supports fresh, clean water and soil preservation.	
S202 Graeme Iain Shellard , Sarah Elizabeth Shellard, Cameron Anthony Shellard, Finlay David Shellard Graeme Shellard	S202.002	General comments - overall	Not Stated	Considers the plan change attempts to change behaviour through legislation without any understanding of cost or impact and without consideration of costs for enforcement Considers no serious attempt has been made with landowners to discuss and address the perceived issues. Considers PC1 is fundamentally flawed, expensive and unmanageable, does not align with the direction of the government, and the option to work with landowners was not explored effectively.	Withdraw PC1. Develop and implement improvements through community-based support / education supported by measurements and reporting
S202 Graeme Iain Shellard , Sarah Elizabeth Shellard, Cameron Anthony Shellard, Finlay David Shellard Graeme Shellard	S202.003	General comments - overall	Not Stated	Notes there is no information on RPS Plan Change 2. Considers the content of plan change 2 could have a material impact on submitters response to Plan Change 1 and could be detrimental to their understanding of the council's overall plan.	Share Plan change 2 high level changes or topics, and plan change 1 consultation be repeated to allow consideration of planned change 2 in response
S203 Peter Thomson	S203.001	General comments - overall	Not Stated	Supports the submission of Robert Anker	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S203 Peter Thomson	S203.002	General comments - overall	Not Stated	Notes PC1 changes are largely drawn from, or a result of, the direction stated in the NPS-FM for Freshwater Management and that the Government has committed to replacing the NPS- FM. Considers it is inappropriate and a waste of ratepayers money to commit to the implementation / adoption of the Natural Resources Plan as the Government has indicated that the NPS FM will be replaced.	Withdraw PC1 until the new National Policy Statement for Freshwater Management has been released.
S204 Willowbank Trustee Limited	S204.001	General comments - overall	Amend	The submitter generally supports the intent of the amendments in PC1 but does have concerns that PC1 does not acknowledge the importance of rural and primary agriculture activities. Submitter also opposes parts of PC1 as it does not: (a) promote sustainable management of physical resources, including enabling people and communities (including the greater Wellington farming community), to provide for their health and safety, and their social, economic and cultural well-being; (b) promote the efficient use and development of physical resources; (c) ensure consistency with good resource management practise; or (d) adequately manage adverse effects on the environment.	Willowbank requests amendments to PC1 to give effect to the concerns raised in this submission.
S206 Winstone Aggregates	S206.014	General comments – overall	Not Stated Amend	Considers there is a lack of consideration for quarrying activities through the drafting of the rules and the s32 evaluation. Considers that quarrying activities are not specifically anticipated under either of the rules frameworks introduced in PC1 for rural activities or urban activities. Considers that quarrying activities would be captured under the urban related rules, which would be onerous and would restrict continued operation of local	Seeks specific consenting pathway for the continuation of regionally significant quarrying activities within the Wellington Region.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>quarries. Considers the current approach inconsistent with the RPS, which directs recognition of the benefits of mineral resources and their ongoing use.</p> <p>Considers the proposed approach inconsistent with national direction that provides for clear consenting pathways for beneficial activities such as quarrying activities, noting the NPS-FM and NES for Freshwater in particular. Also notes the NPS-IB and NPS-HPL provide a pathway for aggregate extraction and supply, which is tied with the implementation of the NPS-UD in providing for the necessary infrastructure to deliver well-functioning urban environments.</p>	
S206 Winstone Aggregates	S206.015	General comments - overall	Not Stated Oppose	<p>Considers prohibited activity status is not reasonable, based on a wide range of activities that would be captured under the proposed prohibited rules, noting that prohibited activity status is afforded to activities causing significant and unmitigable adverse effect, or that are fundamentally contrary to a planning document. Considers that neither a sufficient evidence base or evaluation has been provided for the prohibited activity status, or for the consideration of alternative activity statuses to appropriately manage the resource management issue. Further considers the non-complying activity status overused and where the purpose of the RMA and objectives of the plan can be met by a less restrictive regime, that it should be adopted, citing an Environment Court decision. Considers discretionary activity status to generally be more efficient and effective and non-complying activity status as a default where an activity is not otherwise provided for inappropriate,</p>	Not stated –Seeks that further consideration is given to the activity statuses proposed and whether proportionate evaluation has been given.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				noting that quarrying activities would trigger non-complying activity status for earthworks. Considers the proposed approach inconsistent with national direction that provides for clear consenting pathways for beneficial activities such as quarrying activities, noting the NPS-FM and NES for Freshwater in particular, which provide for a discretionary consenting pathway for quarrying and clean filling activities. Considers non-complying activity status would undermine the ability to implement national direction by bundling resource consent applications into non-complying activity status.	
S208 Julie Martin	S208.001	General comments - overall	Oppose	<p>Opposes PC1 in relation to the management of freshwater within Te Whaitua te Whanganui-a-Tara Implementation Programme, the amendments to the beds of lakes and rivers rules, and new sites with significant indigenous biodiversity values.</p> <p>Notes objection to 'new national direction' due to the change of Government and potential for national direction to change making PC1 unfit for purpose.</p> <p>Opposes the content of the Te Whaitua te Whanganui IP as it discusses the submitter's property.</p>	Not Stated
S211 Hutt City Council	S211.001	General comments - overall	Amend	Supports the intent of PC1, however expressed concern with the inclusion of the 2040 E. coli target, and the prohibition of unplanned urban growth.	Not stated
S212 Heather Phillips	S212.001	General comments - overall	Not Stated	Considers sections are missing from the plan.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S212 Heather Phillips	S212.010	General comments - overall	Not Stated	Notes that fault lines will contribute to high levels of erosion and this cannot be regulated.	Not stated
S212 Heather Phillips	S212.011	General comments - overall	Not Stated	Concern that PC1 is not easily understood and that it has lost the opportunity to tackle issues that contribute to sediment in rivers such as fires, obstructions and climate change. Concern that it has too much detail and lost sight of the bigger picture. Concern that increasing frequency of flood events will deter people from reenforcing rules once they have been swept away by nature i.e. fences.	Not stated
S214 Megan Persico	S214.003	General comments - overall	Not Stated	Supports the "Maymorn Collective" submission.	Not Stated.
S216 Te Rūnanga o Toa Rangatira (Te Rūnanga)	S216.003	General comments - overall	Not Stated	Considers the Te Whanganui a Tara and Te Awarua o Porirua planning frameworks implement the NPS-FM, the Ngāti Toa Statement on the Te Awarua o Porirua Whaitua and Te Mahere Wai for the Te Whanganui a Tara Whaitua. Considers for the first time cultural health of Te Awarua o Porirua and Te Whanganui a Tara is of central importance and there is a pathway towards wai ora involving respect for taonga, restoration of mauri, ecological health, mahinga kai and kaimoana.	Not stated
S216 Te Rūnanga o Toa Rangatira (Te Rūnanga)	S216.004	General comments - overall	Not Stated	Considers the new provisions set new targets and standards for coastal water, nationally threatened freshwater species, groundwater, water quality, habitats, water quantity, and ecological processes of rivers. Submitter is committed to working with the local authorities and Wellington Water Ltd to make these targets achievable	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				especially in relation to stormwater and wastewater discharge consents.	
S217 R P Mansell; A J Mansell, & M R Mansell	S217.001	General comments - overall	Not Stated Oppose	Considers the use of the prohibited activity status for unplanned greenfield development is inappropriate, as the effects are not specified for any particular area. Considers requiring two plan changes (district and regional) is a misuse of the prohibited activity category, which is intended to be used where effects are easily identifiable and discrete. Notes the effects of the prohibited activity are not specified for any particular area, and the extent of the area does not warrant a blanket approach. Considers this proposed approach is onerous, costly and will not achieve implementation of the NPS-UD. Considers the current rules of the NRP and the proposed PC1 rules for planned greenfield development are sufficient to manage the adverse effects of unplanned greenfield development. Seeks for provisions which avoid or prohibit activities associated with unplanned greenfield development to be deleted.	<p>Policies associated with unplanned greenfield developments to be amended to provide for the "avoidance or minimising" of adverse effects</p> <p>This relates to policies WH.P5 & P.P5, WH.P6 & P.P6, WH.P16 & P.P15.</p> <p>Stormwater discharge activities associated with unplanned greenfield development which have prohibited activity status to either be deleted or have their activity statuses amended.</p> <p>This relates to policies WH.P2 & P.P2; Rules WH.R13 & P.R12.</p>
S218 Tim Moody	S218.001	General comments - overall	Not Stated	Endorses the submission of Robert James Anker	Endorses the relief sought in the submission of Robert James Anker
S219 Cuttriss Consultants Ltd	S219.002	General comments - overall	Oppose	<p>Supports initiatives to improve the quality of freshwater and the state of freshwater and coastal environments.</p> <p>Opposes PC1 in its current form and requests it be withdrawn to allow for genuine consultation to occur, consideration of matters raised through this submission process, and consideration of the new direction from the central Government.</p>	Withdraw PC1

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Considers PC1 does not provide sufficient certainty or clarity in the implementation of rules</p> <p>Considers PC1 will have significant financial impacts particularly on pre-committed development projects.</p> <p>Considers PC1 does not provide sufficient certainty or clarity in the implementation of rules.</p>	
S221 Generation Zero	S221.001	General comments - overall	Not Stated	Considers the current quality of water disproportionately affects Ngāti Toa physical health and jeopardizes the cultural practices and mātauranga that reinforce them. Considers this also impacts mana whenua across the Wellington region. Considers collecting kai moana from the harbour is a standard indicator of waterway health in the catchments.	Not stated
S224 Terawhiti Farming Co Ltd	S224.001	General comments - overall	Not Stated	Does not support the Plan Change 1 in its current form and opposes the broadbrush regulatory approach taken and the removal of local decision making. Agrees with the need to improve water quality - where it is poor and where the solutions are within our control - but considers fundamental information is required to do this effectively and equitably. Asks council to recognise the work the submitter has done to date and partner with us in this work rather than regulate us.	Not stated
S224 Terawhiti Farming Co Ltd	S224.004	General comments - overall	Amend	Considers there is not sufficient information to know where water quality is a problem are and therefore how to effectively target work and PC1 proposes broad rules across multiple catchments	Take a farm-scale and catchment-scale approach, rather than whaitua-wide or across a "Freshwater Management Unit

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>instead of seeking to target interventions for the best outcomes.</p> <p>Notes there is only one water quality monitoring site across Makara and Ohariu's full 15,000 hectares and it only relates to the 8,000 hectare Makara Stream catchment. Considers smaller streams located on Terawhiti have good water quality but stringent land use rules will still apply.</p> <p>Considers the proposed regulatory implications are wide-reaching, create social and financial cost, and risk not achieving the outcomes efficiently.</p> <p>Considers solutions are best achieved on-farm but that streams cross property boundaries and therefore must be part of a catchment-wide approach.</p>	
S224 Terawhiti Farming Co Ltd	S224.005	General comments - overall	Amend	<p>Concerned that the PC1 provisions will result in non-compliances and subsequent prosecution within a short timeframe, noting that the transition time from current land uses is very short, considering the cost of implementation for farmers. Seeks for a collaborative approach to be taken rather than implementation of blanket regulation.</p>	Take an approach based less on blanket rules, modelled scenarios and enforcement and more on empowering and partnering with the community.
S225 Upper Hutt City Council	S225.009	General comments - overall	Oppose	Not stated	Delete the addition of onerous requirements for existing consents;
S225 Upper Hutt City Council	S225.010	General comments - overall	Amend	<p>Considers where there is a lack of clarity in definitions and policies, these fail section 32 tests</p>	Delete or significantly amend use of definitions and policies where there is a lack of clarity.
S225 Upper Hutt City Council	S225.011	General comments - overall	Amend	Not stated	Delete or significantly amend policies and definitions which read as rules or conditions of consent;

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S225 Upper Hutt City Council	S225.013	General comments - overall	Amend	Not stated	Amend timeframes in NRP to give reasonable timeframes to implement new direction for landowners, ensure these are reasonable and achievable and where practicable, funded from external sources;
S225 Upper Hutt City Council	S225.021	General comments - overall	Amend	Not stated	Seek amendment to delete references to Wellington Water throughout plan change and refer instead to water entities.
S225 Upper Hutt City Council	S225.022	General comments - overall	Amend	Not stated	Seek that 'and/or' used throughout this document be amended to clarify whether it is inclusive or not as 'and/or' is inappropriate.
S225 Upper Hutt City Council	S225.023	General comments - overall	Oppose	Considers fundamental issues with provisions requiring revision or deletion to ensure PC1 is reasonable, legally robust and practical to implement.	Seeks GWRC undertake a full legal and planning review of proposed provisions and amend PC1 to address concerns. Seeks any other consequential amendments to remedy errors and address relief sought.
S225 Upper Hutt City Council	S225.024	General comments - overall	Support	Supports intent to develop regional provisions to achieve water quality and ecological health objectives within Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.	Not stated
S225 Upper Hutt City Council	S225.025	General comments - overall	Oppose	Concerns with process, timing, and sequencing of aspects of the notified provisions of PC1 require significant amendments. Notes numerous instances throughout PC1 where little regard to national policy direction and principles of natural justice have been considered and reasonableness /evidence base and practical implementation of provisions has been inconsistently applied. Concerned with real-world financial and resource implications, particularly for territorial authority policy and road controlling authority functions.	Not stated
S225 Upper Hutt	S225.027	General comments - overall	Oppose	Considers GWRC has not learned from previous feedback provided by the submitter and has repeated structural	Seeks plan change is amended or paused to remove problematic provisions identified in submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
City Council				problems that hamper the progress of the region. Questions the lawfulness and natural justice of the process in light of the signalled change in policy direction by the government. Concerned about practical implementation of the provisions - including the ability for territorial authorities to conduct business as usual plan-making and road controlling authorities activities.	
S229 Te Kamaru Station Ltd	S229.001	General comments - overall	Oppose	Does not support the Plan Change 1 in its current form and opposes the broadbrush regulatory approach taken and the removal of local decision making. Agrees with the need to improve water quality - where it is poor and where the solutions are within our control - but considers fundamental information is required to do this effectively and equitably. Asks council to recognise the work the submitter has done to date and partner with us in this work rather than regulate us.	Not stated
S229 Te Kamaru Station Ltd	S229.004	General comments - overall	Amend	Considers there is not sufficient information to know where water quality is a problem are and therefore how to effectively target work and PC1 proposes broad rules across multiple catchments instead of seeking to target interventions for the best outcomes. Notes there is only one water quality monitoring site across Makara and Ohariu's full 15,000 hectares and it only relates to the 8,000 hectare Makara Stream catchment. Considers smaller streams located on Terawhiti have good water quality but stringent land use rules will still apply. Considers the proposed regulatory implications are wide-reaching, create social and financial cost, and risk not	Take a farm-scale and catchment-scale approach, rather than whaitua-wide or across a "Freshwater Management Unit

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				achieving the outcomes efficiently. Considers solutions are best achieved on-farm but that streams cross property boundaries and therefore must be part of a catchment-wide approach.	
S229 Te Kamaru Station Ltd	S229.005	General comments - overall	Amend	Concerned that the PC1 provisions will result in non-compliances and subsequent prosecution within a short timeframe, noting that the transition time from current land uses is very short, considering the cost of implementation for farmers. Seeks for a collaborative approach to be taken rather than implementation of blanket regulation.	Take an approach based less on blanket rules, modelled scenarios and enforcement and more on empowering and partnering with the community.
S231 Te Marama Ltd	S231.001	General comments - overall	Oppose	Does not support Plan Change 1 in its current form	Not stated
S231 Te Marama Ltd	S231.002	General comments - overall	Oppose	Oppose the regulatory approach.	Seek council to work with community rather than regulate against it.
S231 Te Marama Ltd	S231.005	General comments - overall	Not Stated	<p>Submitter notes insufficient information to know where water quality is a problem and notes no real data to show the source of these contaminants (both activity and location) or the natural state. Concerned about use of one water quality monitoring site for both the Ohariu and Makara catchments.</p> <p>Considers PC1 addresses the lack of local water quality information by bluntly proposing broad rules across multiple catchments instead of seeking to target interventions for the best outcomes. Considers the proposed regulatory implications are wide-reaching, create huge social and financial cost and risk not achieving the outcomes efficiently.</p>	Seeks GWRC take a farm-scale and catchment-scale approach, rather than whaitua-wide or across a "Freshwater Management Unit" to acknowledge that solutions are best achieved on-farm but that streams cross property boundaries and therefore must be part of a catchment-wide approach.
S231 Te Marama Ltd	S231.006	General comments - overall	Not Stated	Concerned scale of PC1 provisions means many people will be non-compliant within a short timeframe and find	Seeks GWRC take an approach based less on blanket rules, modelled scenarios and enforcement

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>themselves faced with prosecution. Considers transition time between current land use and implementing the proposed changes is very short considering the huge financial implications, farm system change required and land use change required.</p>	and more on empowering and partnering with the community.
S233 Calum Bradbury	S233.001	General comments - overall	Not Stated	<p>Submitter values the water quality values of the following areas for contact recreation and ecosystem health:</p> <ul style="list-style-type: none"> i. Te Awakairangi / the Hutt River ii. Akatarawa River iii. Whakatikei River iv. Titahi Bay v. Lyall Bay vi. Otaki River <p>Considers the natural form and character of these waterbodies is an important part of their value. Natural form and character creates rapids and other features of these sections of river that make them valuable for kayaking.</p> <p>Te Awakairangi / the Hutt Gorge is an outstanding run for whitewater kayaking, which traverses what they consider an outstanding landscape with outstanding amenity values. Would like to see the outstanding value of this section of river recognised in the plan.</p> <p>The natural and wildlife values of these areas are also important to submitter.</p>	Requests the outstanding value of the Hutt Gorge section [Te Awakairangi / the Hutt Gorge] of river recognised in the plan.
S233 Calum Bradbury	S233.003	General comments - overall	Support	Supports PC1 and the initiatives to introduce to improve water quality in the catchment.	Requests that GWRC initiatives are carried through to the operative plan, particularly where they protect and restore ecosystem health, contact recreation values, natural form and character, and amenity.
S234 David and	S234.001	General comments - overall	Oppose	Considers the plan change is inaccessible, difficult to read, and the maps are unclear.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Pauline Innes				Considers the document is difficult to read and is not fit for purpose. Concerned the connections between the policies and the geographic areas are inadequate.	
S234 David and Pauline Innes	S234.007	General comments - overall	Oppose	Concerned the effects of pest species on publicly owned land have not been taken into account sufficiently. Considers that GWRC, DOC and HCC need to undertake more pest control on public land and that private landowners should not be restricted because of the effects of pest animals on poorly managed public land.	Not stated
S234 David and Pauline Innes	S234.009	General comments - overall	Oppose	Objects to the set levels of copper and zinc contamination.	Not stated
S235 Shonaugh Wright	S235.001	General comments - overall	Not Stated	<p>Submitter values the water quality values of the following areas for contact recreation and ecosystem health:</p> <ul style="list-style-type: none"> i. 				The natural and wildlife values of these areas are also important to submitter.	
S235 Shonaugh Wright	S235.003	General comments - overall	Support	Supports PC1 and the initiatives to improve water quality in the catchment.	Requests that GWRC initiatives are carried through to the operative plan, particularly where they protect and restore ecosystem health, contact recreation values, natural form and character, and amenity.
S237 John Turkington Limited	S237.001	General comments - overall	Not Stated	Supports submissions from China National Forestry Group, Forest Enterprises and Juken New Zealand	Not stated
S237 John Turkington Limited	S237.008	General comments - overall	Not Stated	<p>Notes importance that policies, objectives or rules related to commercial forestry are supported by appropriate empirical evidence.</p> <p>Considers the collaboration reports suggests no scientific relationship between erosion risk, sediment delivery (connectivity), sediment yield, or receiving environment target state attributes, such as visual clarity.</p> <p>Question how spatial model of erosion risk can apply as a tool for managing water quality from land used for commercial forestry operations, particularly without any evidence GWRC having given due consideration to existing literature on connectivity and sediment yield.</p> <p>Opposes rules related to identified highest erosion risk land, land use and discharge consent thresholds, and erosion and sediment management plans, as they relate to commercial forestry activities and do not consider management practices beyond erosion risk, and are already adequately controlled for within NES-CF.</p> <p>Considers the Section 32 Report, does not provide evidence or justify that existing commercial forestry contributes to</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				sedimentation and current forestry management practices and the regulatory framework are not adequate to address the improvements needed. Considers councils data suggests the existing regime controlled by NES-CF does not appear to contribute any additional sediment that would be necessary to address to achieve water clarity targets within catchments monitored with that land use.	
S240 Porirua City Council	S240.004	General comments - overall	Oppose	Considers the use of the prohibited activity rule is a blunt instrument and careful consideration should be given to its use, particularly when considering the tensions that exist between national policy statements for freshwater and urban development (noting that the NPS-UD requires consideration be given to out of sequence urban development). Considers there is insufficient evidence to support the approach taken, especially considering the prohibited activity status approach. Considers the definition and associated provisions may result in unintended consequences with no consenting pathway to consider a proposal located in these areas that may have positive outcomes, including positive outcomes for freshwater.	Not stated
S240 Porirua City Council	S240.008	General comments - overall	Not Stated	Considers the PDF format of PC1 and the NRP, with no hyperlinked definitions and with A4 maps in appendices, is out of step with current technology and best practice where plans are presented in digital formats. Considers converting PC1 and the NRP to an eplan format will improve regulatory compliance and reduce costs through time savings for plan users.	Request that Greater Wellington convert both the PC1 and the NRP to an eplan format as soon as practicable to enable plan users to efficiently find information

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S241 Pukerua Property Group Ltd	S241.001	General comments - overall	Oppose	Opposes entirety of PC1; specifically Amendments to Chapters 5.2 and 5.3 - Discharges to land and water and Land use rules; and Amendments to Chapter 9 - Te Awarua-o-Porirua	Withdrawal of PC1
S241 Pukerua Property Group Ltd	S241.003	General comments - overall	Oppose	Notes haste in PC1 preparation with reference to the Clause 16 memo amending errors in rules. Highlights poor approach to planning policy.	Withdrawal of PC1
S241 Pukerua Property Group Ltd	S241.007	General comments - overall	Not Stated	Considers errors and cost implications of plan change and the current state of flux with regard to national direction for freshwater management, purpose of the RMA would be better achieved by withdrawing PC1 to both await the changes in national direction from the new government and correct errors in the document that already have legal effect.	Withdraw PC1. Should PC1 not be withdrawn, submitter seeks amendment to stormwater discharge rules to reduce level of additional cost and risk introduced by the plan change.
S242 Anya Pollock	S242.001	General comments - overall	Support	Supports in full the submission of F.O.W.K.S. (Friends of Waipāhihi Karori Stream)	Not Stated
S243 Land Matters Limited	S243.033	General comments - overall	Oppose	Considers PC1 has been hastily prepared and is having unintended effects as a result of drafting errors, and are creating significant implications for housing affordability and land viability already due to the immediate legal effect of provisions.	Withdrawal of PC1 to allow for a comprehensive review of provisions of plan change as they relate to national guidance
S244 Andrew Esler	S244.001	General comments - overall	Not Stated	"Submitter values the water quality values of the following areas for contact recreation and ecosystem health: i. Te Awakairangi / the Hutt River ii. Whakatikei River iii. Te Whanganui a Tara / Wellington Harbour iv. Porirua Harbour v. Titahi Bay vi. Lyall Bay Considers the natural form and character of these waterbodies is an important part of their value. Natural form and character	Requests the outstanding value of this section [Te Awakairangi / the Hutt Gorge] of river recognised in the plan.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S256 Waste Management NZ Limited	S256.001	General comments - overall	Not Stated	<p>Supports maintaining and improving water quality in the Wellington Region, but considers PC1 goes beyond the control of land for the purpose of maintaining the quantity and quality of water bodies and coastal waters, and steps into strategic planning and controlling the location of land use development.</p> <p>Considers without the amendments proposed by the submitter to PC1, the provisions will not:</p> <ul style="list-style-type: none"> a) promote the sustainable management of resources or achieve the purpose of the RMA and are contrary to Part 2 and other provisions of the RMA; b) enable the social and economic wellbeing of the community; c) meet the reasonably foreseeable needs of future generations; d) achieve integrated management of the effects of use, development or protection of land and resources in the Wellington Region; e) enable the efficient use and development of Waste Management's assets and operations, and of those resources; and f) appropriately achieve the objectives of the Regional Policy Statement, in terms of section 32 of the RMA. 	Not stated
S257 Kāinga Ora	S257.002	General comments - overall	Amend	Not stated	That the specific amendments, additions or retentions which are sought, are accepted and adopted into the Natural Resources Plan, including such further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S260 Cannon Point Developme	S260.001	General comments - overall	Support	Supports PC1 objectives but considers the objectives do not warrant the subsequent policies and rules that prohibit unplanned greenfield development and	Not stated. Delete the definition of Unplanned greenfield development and delete Maps 86-89 Greenfield Areas (planned and unplanned). Or alternatively amend Map 88 to include the site

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
nt Limited (Ltd.)				<p>associated stormwater discharges. Concerned this prohibition would foreclose any opportunity to manage adverse effects to achieve Target Attribute States and coastal water objectives where this is possible.</p> <p>Suggests an effects management approach would better allow for the competing directives of the NPS-FW and NPS-UD to be resolved.</p>	<p>extent of Cannon Point, as shown on the map included in Appendix A, and further described in paragraph 1.12, of submission as a Planned/ existing urban area, and make consequential amendments to subsequent PC1 provisions, to reflect the above.</p>
S261 Forest & Bird	S261.008	General comments - overall	Not Stated	<p>Notes the current provision for a "recognised nitrogen risk assessment tool" allows a tool to be used to fulfil the policies in the plan by a process outside Schedule 1, enabling council to approve any tool provided it is "quantitative" and assesses risk of nitrogen discharge.</p> <p>Questions the lawfulness of delegation, as no other criteria or processes are provided for approval. Considers it critical that tools account for biophysical factors and relate to the actual discharge or environmental effects of the discharge. Considers any "recognised nitrogen risk assessment tool" must be subject to wider public scrutiny before being included in the plan.</p>	Consult on any recognised nitrogen risk assessment tool before including in the plan
S261 Forest & Bird	S261.010	General comments - overall	Not Stated	<p>Considers PC1 essentially provides for farming as a permitted activity provided there is a farm plan. Notes the requirements for farm plans may be confusing for plan users due to being spread across PC1 Schedule 36 and the existing NRP and suggests this could be improved. Notes additional regulation can be imposed beyond farm plans. Considers it critical to regulate land use to manage cumulative effects, noting existing challenges with contaminants in the Porirua whaitua. Considers Council should be able to decline resource consent for farming activity where it is not</p>	Consider improvements for distribution of requirements for farm plans in PC1 provisions. Amend to provide a stronger activity for farming activities to allow Council to decline resource consent for farming activity where it is not confident the effects will be appropriately managed by a farm plan.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				confident the effects will be appropriately managed by a farm plan, and that a stronger activity status is required. Considers permitted activity status is only appropriate if oversight is not needed on the content of farm plans, and when they can be written by farm advisers where there is certainty the adverse effects of farms will result in the desired environmental outcome. Concerned this may not be possible in the Porirua Whaitua.	
S262 Southern North Island Wood Council	S262.002	General comments - overall	Not Stated	Considers that PC1 is inconsistent with the whaitua committee recommendations and is too onerous.	Not stated
S263 New Zealand Carbon Farming Group ("NZCF")	S263.001	General comments - overall	Oppose	<p>Notes that the purpose of PC1 is to give effect to NPSFM in two of the five whaitua of the Wellington region and implement regulatory and some of the non-regulatory recommendations from Whaitua Te Whanganui-a-Tara Implementation Programme ("TWT WIP") and Te Awarua-o-Porirua Implementation Programme ("Top WIP"), including by implementing the National Objectives Framework ("NOF") within Te Awarua-o-Porirua and Te Whanganui-a-Tara whaitua.</p> <p>Notes the Section 32 Report concludes the outcome sought by PC1 is the reduction of sediment in the rivers in Te Awarua-o-Porirua and Te Whanganui-a-Tara. The Section 32 Report concludes that:</p> <ul style="list-style-type: none"> • plantation forestry has associated land disturbance and discharges of sediment; • forestry is a major land use in the Te Awarua-o-Porirua and Te Whanganui-a- 	<p>1. That the provisions of the Proposed Plan Change that regulate commercial forestry, including those provisions that are intended to prevail over the NESPF, are withdrawn (or the Proposed Plan Change is not included in the NRP) until such time as:</p> <ul style="list-style-type: none"> - the efficiency and effectiveness of the NESCF has been monitored and the results of such monitoring support the need for provisions in the NRP that prevail over the NESCF; - the scope of the Proposed Plan Change clarified, including in respect of permanent forests, or commercial forests planted for carbon sequestration purposes; - decisions on submissions on Proposed Change 1 to the WRPS have been made; - the recommendations in the Te Whaitua te Whanganui-a-Tara Implementation Programme 2021 accurately and appropriately reflected in Proposed Plan Change provisions; - a fulsome evaluation of the provisions is undertaken in a manner consistent with section 32 of the RMA, with the outcome of that evaluation

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Tara whaitua (13.5% and 8% respectively);</p> <ul style="list-style-type: none"> • much of this forestry is located on steep land in the higher elevation areas; • harvesting of the forests occurs and will continue to occur; • therefore, to control sediment and meet outcomes, a combination of regulation of land uses and discharges will be required (including the avoidance of soil disturbance associated with plantation forestry on land with high risk of erosion, incentives and rules to permanently revegetate high risk erosion land). <p>Submitter accepts that some forestry related activities have adverse effects (including in respect of the discharge of sediment), but considers PC1 documentation does not provide sufficient evidence, or technical data to support proposed regulatory response. Considers that the regulatory response included in the PC1, being the avoidance of land disturbance, is disproportionate to outcome sought by PC1, being reduction of sediment in rivers.</p>	<p>confirming the necessity of the Proposed Plan Change; and an evaluation is completed under section 32(4) of the RMA, that explicitly evaluates the relevant provisions of the Proposed Plan Change relative to the NESPF, with the outcome of that evaluation confirming the necessity of provisions that prevail over the NESPF.</p> <p>2. Should the relevant provisions of the Proposed Plan Change not be withdrawn (or the Proposed Plan Change is included in the NRP), NZCF seeks that the Proposed Plan Change is amended to make all required changes, including the specific amendments set out in Table at Appendix A. It is noted that the relief in Appendix A is only sought should NZCF's primary relief (being the withdrawal of the Proposed Plan Change or the Proposed Plan Change not being include in the NRP) not be accepted.</p> <p>3. Such further, alternative or consequential relief as may be necessary to fully give effect to this submission.</p> <p>4. Consistent with the Implementation Plans' recommendations, NZCF is available and willing to work collaboratively with GWRC, including through the sharing of information in respect of commercial forestry and the implementation of the NESCF, to further develop practice and any necessary regulatory intervention to address the adverse effects of discharges from commercial forestry activities on water quality.</p>
S263 New Zealand Carbon Farming Group ("NZCF")	S263.006	General comments - overall	Oppose	<p>Submitter notes Proposed Plan Change 1 WRPS is to give effect to the NPSFM and is therefore a freshwater planning instrument (in part). Notes that submissions on Proposed Change 1 are currently being heard and the final form of the WRPS (incorporating decisions on Proposed Change 1) is not known.</p> <p>Considers PC1 is also a freshwater planning instrument that is to give effect to</p>	Seeks that PC1 is withdrawn (or the Proposed Plan Change is not included in the NRP).

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				the NPSFM. Considers it can be concluded that the final form of provisions in the WRPS as a result of Plan Change 1 to the WRPS will be relevant, and need to be given effect to, in the NRP. Considers that, because content of the WRPS that gives effect to the NPSFM is yet to be determined, it is premature and inefficient to notify NRP provisions that are also to give effect to the NPSFM.	
S265 The Maymorn Collective - Amanda and Rami Mounla - Marita Manns Trustee Limited	S265.004	General comments - overall	Oppose	Considers PC1 contains errors in drafting and fails to define what some key terms mean. S276 Jody Louise Sinclair, Joshua William Lowry, Anne Friedarika Sinclair & Tracey Lynn Browne	S276.007	General comments - overall	Oppose	Considers there are errors in drafting which change the intended meaning	Review and undertake an edit of PC1
S277 Craig Innes	S277.001	General comments - overall	Oppose	<p>Considers the plan change is inaccessible, difficult to read, and the maps are unclear.</p> <p>Considers the document is difficult to read and is not fit for purpose. Concerned the connections between the policies and the geographic areas are inadequate.</p>	Not stated.
S277 Craig Innes	S277.006	General comments - overall	Oppose	Concerned the effects of pest species on publicly owned land have not been taken into account sufficiently. Considers that GWRC, DOC and HCC need to undertake more pest control on public land and that private landowners should not be restricted because of the effects of pest animals on poorly managed public land.	Not stated.
S278 Alex Pfeffer	S278.001	General comments - overall	Not Stated	Supports maintaining a high level of water quality. Concerned new regulations are blanket rules that are unnecessary in some catchments, would be unfairly applied, and prevent further development of productive use of land.	Not Stated
S280 .Peter Handford	S280.001	General comments - overall	Not Stated	Considers focus of PC1 should be achieving environmental outcomes, not prescriptive blanket removal of land uses from particular areas	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S281 Kirsty Gill	S281.001	General comments - overall	Oppose	Concerned PC1 puts excessive restrictions on land owners.	Not Stated.
S281 Kirsty Gill	S281.006	General comments - overall	Oppose	<p>Opposes the broad-brush regulatory approach taken under PC1 and the removal of local decision making from the community.</p> <p>Agrees with the need to improve water quality where it is poor and where solutions are within landowners control. Considers fundamental evidence is required to do this effectively and equitably.</p> <p>Suggests GWRC recognise the personal work done by landowners and partner with the community rather than regulate against them.</p> <p>Notes they will be providing an additional submission in February.</p>	Not Stated.
S282 Pat van Berkel	S282.001	General comments - overall	Support	No submission point made - to be deleted	Not stated
S282 Pat van Berkel	S282.004	General comments - overall	Support	Recognises four TA's will be required for PC1 and Whaitua's recommendations and notes addressing water issues in cities is vital.	Not stated
S282 Pat van Berkel	S282.005	General comments - overall	Amend	Concerned with no mention of the 300ha Mangaroa Peatland.	Include reference to the Mangaroa Peatland in PC1
S283 Todd Henry	S283.001	General comments - overall	Not Stated	<p>Submitter values the water quality values of the following areas for contact recreation and ecosystem health:</p> <ul style="list-style-type: none"> i. Te Awakairangi / the Hutt River ii. the Whakatikei River iii. Te Whanganui a Tara / Wellington Harbour, <p>Considers the natural form and character</p>	Requests the outstanding value of this section [Te Awakairangi / the Hutt Gorge] of river recognised in the plan.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>of these waterbodies is an important part of their value. Natural form and character creates rapids and other features of these sections of river that make them valuable for kayaking.</p> <p>Te Awakairangi / the Hutt Gorge is an outstanding run for whitewater kayaking, which traverses what they consider an outstanding landscape with outstanding amenity values. Would like to see the outstanding value of this section of river recognised in the plan.</p> <p>The natural and wildlife values of these areas are also important to submitter.</p>	
S283 Todd Henry	S283.003	General comments - overall	Support	Supports PC1 and water quality improvement initiatives.	Requests that GWRC initiatives are carried through to the operative plan, particularly where they protect and restore ecosystem health, contact recreation values, natural form and character, and amenity.
S286 Taranaki Whānui	S286.005	General comments - overall	Not Stated	Concerned additional rules for stormwater management would create additional barriers to develop land for long-term benefit of Taranaki Whānui uri through Papakāinga.	Not stated
S286 Taranaki Whānui	S286.006	General comments - overall	Not Stated	Notes the huanga of mahinga kai in Schedule B has not been updated following the Whaitua process and publication of Te Mahere Wai o Te Kāhui Taiao.	Seeks amendment of Schedule B in consultation with mana whenua to fully reflect mahinga kai values and outcomes, including those expressed in Te Mahere Wai o Te Kāhui Taiao
S287 M. Garcia	S287.009	General comments - overall	Oppose	Considers there are errors in drafting which change the intended meaning	Review and undertake an edit of PC1
S287 M. Garcia	S287.013	General comments - overall	Oppose	Considers there is no quantification for the benefits or quantification of the costs and that just because GWRC consider they are obliged to do something is not a valid reason to have no idea of the value or cost of the exercise.	Produce a thorough cost-benefit exercise and recognise ratepayers are not a limitless source of funds.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S288 China Forest Group Company New Zealand Ltd	S288.001	General comments - overall	Not Stated	<p>"Considers several aspects of PC1 are poorly founded and require considerable research and explanation. Notes the following points of concern:</p> <ul style="list-style-type: none"> - the consultation/representation process is flawed and short-changed, directly impacting sectors. - controls extend beyond the recommendations of whatua committee reports. - rules that apply to forestry that are not supported by GWRC data and past records. - the rules are unable to be implemented without loss of estate due to the spatial logistics of harvesting and roading. - there has been no consideration of the ETA and other cost liabilities contingent upon non-replant of land retired from PC1 rules. - duties under the NES Regulation 6 Stringency insufficiently executed. - the s32 analysis is inadequate. " 	<p>Remove the sections of PC1 related to forestry.</p> <p>Align rules to those of the NES-CF.</p> <p>Work collaboratively with industry participants and land-owners to implement good practice, and where needed, engage on how to refine and plan land management outcomes that will fulfil the objectives without excessive bureaucracy and cost.</p>
S288 China Forest Group Company New Zealand Ltd	S288.020	General comments - overall	Not Stated	The submitter has provided their own detailed response to the options assessment of costs, benefits and efficiency and effectiveness in pages 39-43 of their original submission.	Not stated
S3 Dougal Morrison	S3.010	General comments - plantation forestry	Not Stated	Concerned this will result in unmanaged forests and associated problems.	Not stated.
S3 Dougal Morrison	S3.015	General comments - plantation forestry	Amend	Concerned if highly erodible land is unable to be re-planted post-harvest, the land will revert to unmanaged forests. Concerned this will create problems of trees falling into streams or causing shading of streams.	Seeks that: Replanting be a permitted activity subject to the permitted activity conditions in the NESCF The recommendations from Te Awarua-o-Porirua WIP (Recommendations 54 and 55), and the recommendation from Te Whanganui-a-Tara WIP

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					(Recommendation 37) be adopted by Greater Wellington. Greater resources are provided to monitor harvesting activities.
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.006	General comments - plantation forestry	Not Stated	Considers the prohibition of plantation forestry from the highest 10% relative Risk of Erosion Prone Forestry Land does not stack up and may not reduce sediment levels in water bodies.	Not stated
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.007	General comments - plantation forestry	Oppose	Considers making all forestry operations a controlled activity is draconian and is not supported by evidence.	Not stated
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.011	General comments - plantation forestry	Not Stated	Considers GWRC should ask for ESC data used by NES-CF to be reviewed and make a technical case if Wellington, Hutt Valley and Porirua have an erosion risk severe enough to warrant banning plantation forestry (red zoned land). Notes national consistency on this matter is desirable.	Not stated
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.014	General comments - plantation forestry	Not Stated	Concerned about aspirational targets becoming regulation in PC1 and questions whether this is fair and reasonable. Notes plantation forestry historically does not compete for highly productive land used for food production, but rather occupies low fertility and more erosion prone hill country and the avoided erosion, carbon services and other ecosystem services	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				provided by plantation forestry are highly valued. Considers the requirement under the NPS-FM for plantation forestry to release no more sediment to water bodies than existed in the natural state is unrealistic. Notes erosion events will be more frequent and intense due to climate change. Concerned PC1 will set a precedent in NZ and the proposed peak sediment discharges of only 100g/m ³ , high compliance costs, certification of plans, auditing, and the inability of current forestry best practise and technology to deliver desired outcomes, the regulations could put plantation forestry in hill country out of business. Concerned clause 1.3.5(c) of the NPS-FM is being overlooked in favour of an unrealistic vision for the health and wellbeing of waterbodies.	
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.015	General comments - plantation forestry	Oppose	Considers PC1 proposals are naïve about the implications for plantation forestry, ill thought out and subject to unintended consequences. States there is no evidence presented that retiring out the steepest ('most erosion prone') plantation forest land will improve sediment outcomes in waterways and leakage of sediment could get worse if management practices have to change.	Not stated
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.016	General comments - plantation forestry	Not Stated	Considers most sediment arising from plantation forestry operations in Wellington is from roading, skid sites/track making and skidding logs, and stream/river scouring, despite contractors following best practice guidelines. Notes the region has few landslides in forested areas, even after harvesting. Notes larger operations using haulers are designed and operated in accordance with best practice guidelines, and earthworks are	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>minimised on steepest slopes.</p> <p>Considers "high risk erosion prone" slopes do not contribute much sediment to water bodies in well managed forests. Considers under extreme weather events, and time averaged over the life cycle of the forest, steep slopes are comparable to those under continuous native bush cover.</p>	
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.017	General comments - plantation forestry	Not Stated	<p>Notes there are no studies that measure the amount of sediment from forestry operations in the Whaitua Te Whanganui-Tara or Te Awarua-o-Porirua Whaitua. Modelling that has occurred is based on broad assumptions. Considers Wellington forests have minimal erosion problems and therefore have not been closely studied, and science work has been focused on highly erosion prone land in other areas, which are subject to orange and red zoning under the NES-CF. Notes no such land classes are present in the Whaitua Te Whanganui-a-Tara or Te Awarua-o-Porirua Whaitua. Notes GW have not sought professional forestry or soil conservator advice. Considers some policies are based on models of erosion risk rather than real data. Considers it is not possible to allocate equitable contributions to reducing sediment loads without data on the relative contributions of sediment from natural sources, forestry, pastoral farming and urban/roading development.</p>	Not stated
S36 Wellington Branch of New Zealand Farm Forestry	S36.019	General comments - plantation forestry	Not Stated	<p>Notes a report commissioned by Whaitua Te Whanganui-a-Tara which indicates that deposited fine sediment levels was low in some rivers with extensive plantation forestry, and that fine sediment was not significantly impacting ecosystem health. Suggests relatively high levels of fine</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Association				sediment downstream in the Hutt River are a result of bulldozer activity from flood protection works, rather than from upstream farming, urban earthworks or forestry activity. Notes current GW data for the Hutt Valley sub-catchments with high levels of plantation forest do not indicate elevated levels of deposit fine sediment.	
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.021	General comments - plantation forestry	Not Stated	Notes NZ literature which indicates Wellington has relatively stable hill country soils which are desirable for forestry operators. Considers the risk of landslide for Wellington, Porirua, and Hutt Valley soils is lower than for unreinforced bare soil.	Not stated
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.022	General comments - plantation forestry	Not Stated	Notes bare land in a harvested pine forest, whilst not having a canopy to intercept rainfall, does not behave like unprotected bare soil. Notes there is no specific data differentiating various sources of sediment in Wellington water bodies. Considers to understand the implications of potential solutions for forestry, there should be breakdown of sediment yields between soil disturbance factors, at different stages of the forestry cycle. Considers urban and pastoral land cover classes are worse than predominantly plantation forestry catchments and native catchments.	Not stated
S36 Wellington Branch of New Zealand Farm Forestry	S36.023	General comments - plantation forestry	Not Stated	Notes a Hawke's Bay study which suggests forestry performed better than adjacent pasture, and that earthworks including road making was a substantial contributor to sediment in the stream. Suggests that slips on steep land under periodic forestry cover are not a major source of suspended sediment. Notes	GW commission or obtain live data about shallow landslide incidence after harvest from their own extensive forests to see if retiring out steepest slopes from forestry could actually make a significant difference to sediment in water bodies.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Association				another study that risk of shallow slips on non-wooded greywacke steep slopes is less than for other soil types. Suggests GW obtain data on shallow landslide incidence after harvest from their own forests to determine if retiring steepest slopes from forestry impacts sediment in water bodies.	
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.024	General comments - plantation forestry	Not Stated	<p>Considers the expectation in PC1 for plantation forestry to produce little more sediment than the same catchment would under natural cover is unrealistic with current land-based harvesting and stem/log transport technology. Notes pastoral, intensive farming, horticulture and arable/market gardening do not seem to be held to the same expectation.</p> <p>Considers sediment production from the natural state is not well quantified and achieving sediment rates close to the natural state is an unrealistic goal that does not take into account climate change, effects of earthquakes and volcanic eruptions, land use changes and clearance and other natural dynamics over the last 1000 or more years.</p> <p>Considers there is little awareness of recent 'natural' sedimentation dynamics (e.g. influence of feral animals, deer, goats, pigs) or increases in sediment from unmodified natural catchments. Notes natural sediment levels of any particular waterway will depend on stream size and water volume, steepness, state of vegetation cover, input from mineral rich seepages and iron and other mineral oxides can be a major portion of sediment and turbidity near the sources of these seepages.</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Notes water quality is only routinely monitored at a few readily accessible sites low down in the catchment.</p> <p>Questions what 'natural state' means in relation to managing forestry sediment loss.</p> <p>Is it a waterway in the foothills surrounded by climax bush (undisturbed by ungulates), a water body flowing from a recently regenerating seral forest as covers much of the Wellington hill country and heavily browsed by pest ungulates (goats, deer, pigs), or is it only defined at the few official monitoring points low down in a catchment area?</p> <p>Questions how individual land managers up-stream can be individually be held accountable if natural state and TAS can only be determined at defined regular monitoring sites.</p> <p>Questions whether TAS are realistic and if they take into account dynamics of natural systems including increased erosion caused by climate change or earthquakes.</p>	
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.025	General comments - plantation forestry	Not Stated	<p>Considers it unreasonable to set worst case stormwater sediment discharges for forestry cycles as if they operate at the same frequency each year, or with every rain event. Considers it more equitable to time-average discharge limits for forestry over a 25-35 year period. Considers insufficient understanding is demonstrated in PC1 of sediment loss to waterways within a cyclic forestry environment. Considers the peak point source sediment limits of 100g/m³ is unrealistic. Considers</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				it better to define forestry best practice and audit to those standards.	
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.026	General comments - plantation forestry	Not Stated	<p>Notes data is needed to determine where sediment is coming from. However, considers forestry earthworks, including roading and associated batters, culverts, stream crossings, use of skidders, for plantation forestry near Upper Hutt are much more frequent and significant sources of sediment than shallow land slide and surficial erosion from steep slopes after tree harvest. States this view is supported by the Hawkes Bay Pakuratahi Paired catchment report, (Eyles). Notes Natural State sediment contributions can be significant. Considers forestry roadworks and associated harvesting earthworks can generally be managed to minimise but not eliminate sediment loss to waterways, but rather than focus on extremely conservative peak discharge limits, the sediment losses over the whole forestry cycle need to be factored in.</p> <p>The submitter has not observed evidence that steep slopes are producing significant areas of shallow landslides (Upper Hutt area). Suggests Greater Wellington produce evidence from their own forests (rather than rely on dubious modelling).</p>	Not stated
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.027	General comments - plantation forestry	Not Stated	Considers that if plantation forestry were prohibited from "highest risk erosion prone" slopes, that after harvesting, regeneration of pine, gorse and other weeds would be likely, and that regeneration of native vegetation is unlikely. Notes the potential for large scale wilding pines. Notes tree toppling on managed sites could generate sediment.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Considers retiring of steepest land will affect the viability of current forestry operations. Noting that if cable harvesting can no longer be undertaken due to mid-slopes no longer having plantation forestry, then machine access must be along low-lying territory with more crossings of streams and seepages, thereby exacerbating sediment and erosion issues.	
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.028	General comments - plantation forestry	Not Stated	Considers the performance requirements for woody vegetation replacing pastoral land is a low expectation compared to performance of exotic timber species in managed plantations, and does not meet ETS performance standard for pre-1990 forestry succession. Considers there is potential to improve carbon sequestration by encouraging managed exotic forestry species. Suggests rather than banning production forestry from steepest slopes, consider alternative timber species, permanent forestry, carbon forestry continuous cover forestry / close to nature forestry to reduce risk of sediment loss.	Not stated
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.029	General comments - plantation forestry	Not Stated	<p>Considers there will be unintended consequences from prohibiting plantation forestry from steep slopes as it will alter the forestry management plans as production forests may then be restricted to broad ridge lines and lower slopes/valley floors. Sediment discharges from forestry roading and tracks may also get worse.</p> <p>Notes if cable logging cannot be undertaken, there may be an increased use of ground-based log transport which uses heavy machines on soft temporary tracks rather than on engineered and metalled roads creating more soil</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>disturbance and soil compaction than that caused by cable logging. Considers more stream crossing and seepage crossing, and faster and heavier runoff flows from the upper slopes will also impact earthworks and in the narrow valleys there is often limited space available to install structures to manage sediment near waterways.</p> <p>Concerned larger areas of land than mapped will become uneconomic to grow and harvest trees from, individual parcels will not longer be able to operate and may not be eligible to join an ETS which could trigger claims for compensation or a RMA section 85 claim.</p> <p>Notes pastoral farmers have been encouraged to use plantation forestry (as well as permanent forestry and native revegetation) for Government sponsored Hill Country Erosion programmes, other subsidised planting schemes (e.g. Billion Trees) as well as offsetting livestock GHG emissions. Concerned the prohibition of plantation forestry on steep slopes will significantly reduce their options.</p> <p>Considers it is likely after harvesting erosion prone land landowners will allow natural regeneration to occur rather than replanting which will invariably be dense groves of pine seedlings which quickly achieve canopy coverage, but will grow tall and thin and be subject to disease, stem breakage and toppling in storms. Notes as wilding pines get older, they will produce large amounts of seed and there is likely to be a public backlash about a perceived wilding pine problem. Questions</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				who will be accountable for this problem. Cites former GW soil conservator assertion that radiata pine needs active management and is not a suitable species for unmanaged stands.	
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.030	General comments - plantation forestry	Not Stated	<p>Considers there are many alternative solutions to mitigate the risk of sediment loss from steep slopes and the production forestry ban will undermine research into improved technologies for harvesting and silviculture on steep slopes. Cites the following examples of alternatives:</p> <ul style="list-style-type: none"> - Panpac's method of re-grassing or sowing a cover crop immediately after harvest which greatly reduces surficial runoff and would enable use of selective herbicides to reduce woody regrowth (pines/gorse etc) later and prior to replanting in crop trees. - immediate replanting of crop trees in some situations - replanting at higher than usual planting density - lower final stocking rates - impose restrictions on tracking/earthworks on steepest slopes (and/or additional safeguards to prevent sediment moving offsite). - use of coppicing timber crop species such as poplars, acacia, oak, redwoods and eucalypts. - extend rotation length - alternative harvesting strategies e.g. small coup, strip harvest, selection harvesting. - close to nature (Pro Silva) or Continuous Cover Canopy regimes. <p>Suggests the definition of highest risk erodible forest land can be adjusted by increasing the slope angle to above 30</p>	<p>Amend the definition of 'highest risk erodible forest land' by increasing the slope angle to above 30 degrees and taking into account underlying lithology.</p> <p>That the criteria used are technically peer reviewed by industry recognised experts and aligned to observed field data.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				degrees and taking into account underlying lithology. Considers the criteria used should be technically peer reviewed by industry recognised experts and aligned to observed field data. Prefers the provisions of the NES-CF prevail.	
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.031	General comments - plantation forestry	Not Stated	Notes the NES-CF already requires forests have a full cycle plan, including erosion and sediment control plan, available on request, whereas GW are requiring an erosion control plan certified at an early stage, and for the whole forestry cycle to be controlled and consented. Considers the requirement to prepare and consent an erosion plan 30 years ahead of soil disturbance is unreasonable and the NES-CF rules are sufficient. Notes the cost to prepare and certify an erosion plan will not be affordable at a small scale and many years ahead of forestry income, as well as additional burden of preparing a freshwater plan for livestock operations. Considers the cost of certification and prohibition of plantation forestry on steep slopes will disincentivise pastoral farms wishing to use plantation forestry for offsetting for greenhouse gas emissions. Notes NES-freshwater part 2 provisions only apply to pastoral or arable land operations larger than 20 ha.	That forests under 20ha be subject only to NES-CF rules (permitted activities) and be exempt from GW controlled activity consenting, noting GW can still be notified of harvesting or soil disturbance near water bodies as allowed for in the NES-CF.
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.032	General comments - plantation forestry	Not Stated	Considers the s32 report cost/benefit assessment lacks logic and underestimates financial impacts. Considers the greater than 10% of land taken out of production forestry will have long-term impact, undermine confidence in plantation forestry, and will reduce the benefits of plantation forestry. Notes the desire for equitable processes to achieve the TAS and this should not be about	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>everyone adjusting by an equal amount but about quantifying the problem and minimising environmental risk by targeting the highest contributors of sediment. Questions the equitability of the TAS, noting forestry is a controlled activity but not pastoral farming when the literature indicates pastoral farming activities are far more likely than forestry to release sediment and other contaminants into waterbodies.</p>	
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.033	General comments - plantation forestry	Not Stated	<p>Considers the majority of published evidence shows plantation forestry is much better than pastoral farming in highly erodible zones in relation to soil disturbance and sediment runoff.</p> <p>Notes some sensitive harbours and estuaries are silting up but we don't know the relative contributions from Wellington area forestry vs natural or other land activities.</p> <p>Considers the case put forward by GW is weak, based on a false premise that steepest forestry land will deliver most of the sediment and some of the evidence (visual clarity and sediment yields) is factually incorrect.</p> <p>Notes the NES-CF has been revised with tighter controls and has only just been implemented. Concerned there are serious errors in the assigned TAS values. Considers the gravity of the situation does not warrant overriding the NES-CF and it is unknown whether the original NES-PF had any effect. Notes available data suggests deposited fine sediment in some forestry catchments has improved since 2013-2015. Concerned the rules are being</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				tightened instead of undertaking enforcement.	
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.034	General comments - plantation forestry	Not Stated	Considers the concern that increasing forestry operations will worsen sediment does not account for a number of factors, including: earthworks are often one-off and done at the end of the forest cycle; improvements in harvesting technology; reductions in manual tree falling; the potential for airship assisted harvesting; and improved tools to identify and manage sensitive areas. Suggests sensitive erosion prone areas should be identified and micromanaged.	Not stated
S48 Alan Bell & Associates	S48.002	General comments - plantation forestry	Not Stated	Concerned proposed planning and paperwork increases in PC1 may lead to forest owners seeking a quick way out by harvesting and not continuing with another rotation and loss of significant areas of productive land. Considers that GWRC should make sure the forest owners do a good job of their roading on all types of land. States the owner gets to utilise their investment in land and infrastructure and water quality due to there being ongoing interest in the land.	Not stated
S54 Peter Kiernan	S54.006	General comments - plantation forestry	Oppose	Considers that without local scientific data that changes to the forestry rules are not justified.	Not stated
S58 David and Carolyn Gratton	S58.004	General comments - plantation forestry	Amend	Believes the NES-CF has tighter controls than the NES-PF and should be given time to bed in before controls which go beyond the NES-CF are imposed. The additional requirement to provide an erosion and sediment control plan early in the soil disturbance process is unrealistic and unreasonable.	Retain the NES-CF and exempt forestry blocks of less than 100ha from the PC1 controlled activity requirements.
S111 Forest	S111.005	General comments -	Oppose	Considers GWRC have ignored statements made by Easton, Nation and	Not stated

				site-specific field assessment and expert advice prevails.	
S111 Forest Enterprises	S111.006	General comments - plantation forestry	Oppose	Considers NES-CF has rules and controls for total suspended solids and plantation forestry discharge and seeks justification on how rules in PC1 provide greater positive environmental outcomes.	Not stated
S111 Forest Enterprises	S111.008	General comments - plantation forestry	Oppose	<p>Considers no recommendations from the Whaitua committees or the forestry industry have been implemented which reflect the proposed rules for plantation forestry.</p> <p>Notes as acknowledged in the Whaitua Committee reports, Regional Councils need to work with forestry groups and contractors to provide support that includes ensuring all forestry operators are aware of relevant regulatory requirements and good practice. Considers lack of evidence that GWRC has engaged forestry groups. Considers Implementing new compliance roles does not achieve this recommendation.</p>	Not stated
S191 Juken New Zealand	S191.004	General comments - plantation forestry	Not Stated	<p>Considers the definition of erosion risk on forestry land in the Erosion Risk Mapping for Te-Awarua-o-Porirua and Te-Whanganui-a-Tara report is flawed, as it does not resemble that erosion risk is significantly lower on land with tree cover than pasture land.</p> <p>Considers there is no logic that defining and removing the top 10% of highest erodible forestry land from production would lead to better outcomes for fresh water, and that no consideration has been given to Emission Trading Scheme (ETS) implications for forestry land that has been categorised in the top 10% of the highest erosion land. Notes that land that can't be</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>replanted will lead to liabilities under the ETS.</p> <p>Notes that replanting is included in the Section 32 report but was an omission in the draft plan as an oversight by the GWRC. Considers this should have been rectified by updating the draft plan rather than waiting on submissions as submitters maybe unaware of the replanting omission.</p> <p>Concerns that the pixelated quality of maps 92 and 95 will result in more land then necessary written off.</p>	
S193 Wairarapa Federated Farmers	S193.012	General comments - plantation forestry	Amend	<p>Considers Policy WH.P28 and Rule WH.R22 (requiring plantation forestry is not established or continued beyond the harvest of existing plantation forests on highest erosion risk land) to be a draconian approach that ignores technological advances forestry harvesters have made to harvest practices.</p> <p>Considers the policy an example of managed retreat' for the public good, with all the cost borne by the landowner. Identifies there will be challenges sourcing sufficient seed stock for planting, finding labour to plant native seed stock and sourcing, and paying for specialist advice to ensure new plantings occur in a way that is consistent with the Emissions Trading Scheme (ETS) eligibility criteria to avoid plantings being ineligible for New Zealand Units (NZUs).</p> <p>Considers the conversion of exotic forest to permanent forest presents several difficulties about the ETS as outlined below:</p>	<p>Amend policy to enable the replanting of production forests so long as landowners can identify (through a consent application) how the management and harvest of the forest will be achieved without adverse effects on sediment in water bodies.</p> <p>Make any consequential amendment(s) necessary to give effect to the relief sought.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Uncertainty around how the ETS treats the transition of registered exotic forests to native forest species,</p> <p>Uncertainty around how averaging accounting would address a new planting rotation occurring on a very different basis to when the forested area was originally registered in the ETS</p> <p>Uncertainty around the sequestration rates of native species (this work is still in its infancy and may need 5-6 more years to produce anything of any use)</p> <p>Uncertainty around the possibility of needing to first de-register the exotic forest (and paying back all the NZUs earned from it) before registering the native forest as a new forest.</p> <p>Request this policy be amended to enable the replanting of production forests so long as landowners can identify (through a consent application) how the management and harvest of the forest will be achieved without adverse effects on sediment in water bodies.</p>	
S195 New Zealand Farm Forestry Association (NZFFA)	S195.001	General comments - plantation forestry	Not Stated Oppose	<p>Considers PC1 is biased against forestry. Notes Council monitoring demonstrates that water quality for catchments with significant forest cover is generally better water quality compared with other land uses.</p> <p>Concerned PC1 will cause a significant decline in commercial forest activity in the Wellington region which, in turn, will impact the regional economy, make it harder to meet climate change targets,</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

				and may lead to negative environmental effects.	
S195 New Zealand Farm Forestry Association (NZFFA)	S195.005	General comments - plantation forestry	Not Stated Oppose	Seeks replanting not be regulated in the proposed plan	Seeks replanting not be regulated in PC1
S195 New Zealand Farm Forestry Association (NZFFA)	S195.006	General comments - plantation forestry	Not Stated Oppose	<p>Considers the proposed rules are a major disincentive for investment in commercial forestry and are likely to negatively impact opportunities to obtain an adequate return. Notes the conditions, or costs of meeting the conditions, will prevent land from being harvested and the "highest risk" classification devalues the land and prevents the forest owner from obtaining an income from it.</p> <p>Considers PC1 will reduce the chances of meeting the Climate Change Commission advice to Government advocating increased planting of exotic forests between 2021 and 2030. Notes PC1 deters the submitter from advising planting trees as a long-term investment.</p> <p>Notes that under the Emissions Trading Scheme, owners are required to retain their land in forests after harvest.</p> <p>Notes if forest land is not replanted, it will generate no income and become a financial liability for the owner, while adding nothing to the region's social and economic wellbeing.</p>	Not stated
S195 New Zealand Farm Forestry	S195.008	General comments - plantation forestry	Not Stated Oppose	Considers the council has not provided evidence to support claims within the S32 report forestry is responsible for the "current degraded state" of water bodies.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Association (NZFFA)				Considers there is no evidence that the NES-PF failed to achieve the water quality standards of Greater Wellington, nor any evidence that the new, more stringent NES-CF will fail. Notes if PC1 is adopted, it would be impossible to determine whether or not the new regulations for forestry resulted in any discernible improvements in water quality. Considers without such evidence, there is no reason to undercut a national environmental standard.	
S195 New Zealand Farm Forestry Association (NZFFA)	S195.009	General comments - plantation forestry	Not Stated Oppose	<p>Consider PC1 will make it impossible for many forest owners to provide for their economic well-being or to make reasonable use of their land. Notes this applies the following situations:</p> <p>Notes where forest land is classed as "highest risk," the owner will not be able to derive any revenue from its post-harvest, despite the continuing costs of rates and property maintenance. Considers small parts of a block classified as erosion prone may be essential for access or for harvest infrastructure. Concerned if they are not used, the forest might not be harvested becoming a stranded asset.</p> <p>Concerned it may be impossible to meet all forestry activities conditions in PC1 such as, meeting the maximum sediment level of 100 grams / m³ of runoff. Considers compliance costs may be simply too high to bother.</p>	Not stated
S195 New Zealand Farm Forestry	S195.010	General comments - plantation forestry	Not Stated Oppose	Considers GWRC have not provided forestry specific evidence related to the Wellington region that demonstrates the NES-PF (and now the NES-CF) does not give effect to a specific objective	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Association (NZFFA)				<p>developed to give effect to the NES-FW. Considers there is no justification for the proposed new forestry rules.</p> <p>Considers GWRC have not provided forestry specific evidence to show the new rules will achieve improvements in terms of any particular objective developed to give effect to the NES-FM. Notes there is no defined link between the proposed more stringent rules and a particular objective. By contrast, there is plenty of evidence that plantation forestry as a land use leads to reduced sediment loads and improved water quality.</p> <p>Suggests that what is proposed does not comply with regulation 6.1 in the NES-CF.</p>	
S195 New Zealand Farm Forestry Association (NZFFA)	S195.011	General comments - plantation forestry	Not Stated Oppose	<p>Considers the S32 report with respect to plantation forestry is deficient, incorrect, misleading and devoid of evidence problems are being caused by forestry or current forestry regulations.</p> <p>Considers the report omits mentioning that GWRC could be liable for compensation to China Forestry Group if PC1 goes ahead.</p>	Not stated
S195 New Zealand Farm Forestry Association (NZFFA)	S195.013	General comments - plantation forestry	Not Stated Oppose	<p>Considers the s32 reports statement regarding the NES-PF erosion susceptibility classification system in comparison to the ESC mapping undertaken for Greater Wellington to be incorrect and misleading.</p> <p>Notes the ESC mapping undertaken for Greater Wellington defines the 'highest-risk' land as the most erodible 10% of forest land by area and land use within each Whāitua. Considers this is a relative measure, not an absolute one. Notes that just because land is in the top 10% does</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>not imply that it is at risk of erosion.</p> <p>Notes if Greater Wellington is concerned that the land in its area has been misclassified in the NES-CF, then there are channels to update the mapping and classifications.</p>	
S195 New Zealand Farm Forestry Association (NZFFA)	S195.014	General comments - plantation forestry	Not Stated Oppose	<p>Considers the S32 report intention to ensure plantation forestry does not establish or endure on highest erosion risk land and the most appropriate management practices are employed is laudable but inadequate.</p> <p>Considers it focuses on relative risk, not absolute risk. Notes if most of the land is erosion prone, then setting a target of 10% is irrelevant. Notes since the classification is by land use, there would always be a 'top 10%' of erosion risk land under plantation forestry and that land's retirement with each successive harvest would lead over time to very little plantation forestry remaining.</p>	Not stated
S195 New Zealand Farm Forestry Association (NZFFA)	S195.015	General comments - plantation forestry	Not Stated Oppose	<p>Notes the s32 report considers the notification process for forestry activities in the NES-PF is not fit for purpose, and there is no quality assurance or approval process provided for the notified plans.</p> <p>Considers there is no evidence that the plans provided under the NES-PF and now under the NES-CF are inadequate. Notes recommendations asking the Council to better enforce compliance within the NES-PF rather than seek more stringent regulations.</p> <p>Acknowledges there have been breaches, but that this will happen with any regulation irrespective of its stringency.</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Notes Regional Council staff will not enforce plans unless there is a complaint. Suggests even Greater Wellington staff are slow to act.</p> <p>Notes Greater Wellington staff are not aware of the content of the current regulations and suggests better resourcing and training, rather than more regulations, would lead to better outcomes.</p>	
S195 New Zealand Farm Forestry Association (NZFFA)	S195.016	General comments - plantation forestry	Not Stated Oppose	<p>Comments for policy package option 1, for Plantation forestry and woody vegetation clearance and - efficiency and effectiveness of provisions, in the s32 report are as follows:</p> <p>Considers discrepancies in the interpretation of Te Awarua-o-Porirua WIP recommendations 54 and 55 within the S32 report. Suggests that these recommendations do not focus on improving plantation forestry management to reduce sediment, but rather call for changes within the framework of the NES-PF, contradicting the objectives of PC1. Also notes the request for Greater Wellington to work with the industry, which is not happening. Considers PC1 is not an adequate response to these recommendations.</p> <p>Considers that recommendation 37 is not focused on promoting best practices in plantation forestry and monitoring compliance, as highlighted in the S32 report. Notes its focussed on the Council's staffing level and seeks alignment with the NES-PF to enhance outcomes.</p> <p>Considers recommendations WIP</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>76,77,78 do not require all harvesting to be approved by the Council, or to be a controlled activity.</p> <p>Considers PC1 does not achieve the outcomes sought in the WIP recommendations.</p>	
S195 New Zealand Farm Forestry Association (NZFFA)	S195.017	General comments - plantation forestry	Not Stated Oppose	<p>Comments for policy package options 2 and 3, for plantation forestry and woody vegetation clearance and - efficiency and effectiveness of provisions, in the s32 report are as follows:</p> <p>Considers the analysis confuses relative erosion risk with absolute erosion risk. Considers there is loose terminology, as New Policy uses the term "highest erosion risk" while New Rule uses "very high erosion risk," and the two terms are used synonymously when they are quite different. Very high erosion prone land is defined already in the provisions of the NES-CF and requires no change.</p>	Not stated
S195 New Zealand Farm Forestry Association (NZFFA)	S195.018	General comments - plantation forestry	Not Stated Oppose	<p>Disagrees with the assessment for options 1, 2 and 3 in the s32 report. Considers there is no basis for the claim that sediment generated by plantation forestry is a problem within the Greater Wellington area because of the regulations governing forestry.</p> <p>Considers there is no evidence of the NES-PF generating worse environmental outcomes in the Wellington area than the pre-2018 consenting regime, nor is there evidence that either forestry or the NES-PF is responsible for the 'current degraded state' of water bodies in the region.</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Notes there are studies showing that over the course of a whole rotation, commercial forestry is much better than many other land uses at minimising sediment flows. An example is the Pakuratahi paired-catchment study.</p> <p>Contend that the environmental benefits of the three options are equal.</p>	
S195 New Zealand Farm Forestry Association (NZFFA)	S195.019	General comments - plantation forestry	Not Stated Oppose	Delete	Not stated
S195 New Zealand Farm Forestry Association (NZFFA)	S195.020	General comments - plantation forestry	Not Stated Oppose	<p>Disagrees with the assessment that the social costs of Option 1 or 3 will be low. Considers both options would reduce plantation forestry activity in the region, leading to job losses within the industry, at the port, and at regional sawmills dependent on logs from the area. Considers the analysis does not attempt to quantify those impacts.</p> <p>With all three options the submitter disputes that plantation forestry contributes in any significant way to the sedimentation of our rivers and argue PC1 is unnecessary. Considers the NES-CF is quite capable of regulating forestry activities to control sediment flows when enforced.</p>	Not stated
S195 New Zealand Farm Forestry Association (NZFFA)	S195.021	General comments - plantation forestry	Not Stated Oppose	<p>Considers the analysis in the Section 32 report does not quantify the monetary costs of the options.</p> <p>Notes other significant economic factors are the devaluation of forest land, the reduction of economic activity, and the loss of forest income from both timber and</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>carbon credits.</p> <p>Suggests the economic costs of option 1 are high, and for option 3 are medium as both will increase the costs and create a "negative benefit". Considers the analysis should state this.</p>	
S195 New Zealand Farm Forestry Association (NZFFA)	S195.022	General comments - plantation forestry	Not Stated Oppose	<p>Notes the analysis appears subjective rather than based on evidence or research. Considers making plantation forestry a controlled activity with 10% of the land to be retired will reduce the amount of land in forestry and may not improve water quality but reduce it.</p> <p>Considers there are more effective ways of improving water quality than those proposed under PC1.</p>	Not stated
S195 New Zealand Farm Forestry Association (NZFFA)	S195.023	General comments - plantation forestry	Not Stated Oppose	Notes the costs of PC1 may outweigh the benefits because as there is no evidence quantifying how much sediment is attributable to which land use, there is a high risk of adding costs without achieving real benefits.	Not stated
S210 Guildford Timber Company Limited, Silverstream Forest Limited and the Goodwin Estate Trust.	S210.003	General comments - plantation forestry	Amend	The submitter considers the NES-CF provides a consistent and clear process for forestry practitioners to manage forestry operations, including on sites susceptible to erosion. The submitter is concerned the provisions included in PC1 add additional layers of requirements in policies and rules that are more restrictive to the updated NES-CF that are unjustified and unwarranted, and not required to implement the objectives of the NRP or NPS-FW. Considers these additional provisions will cause additional costs and delays, and potential confusion around which rules need to be considered on site. The submitter has reviewed and considered the proposed changes and	<p>Seeks the following:</p> <p>NES-CF is used as the basis of management of commercial forestry in the Wellington region and the rules restricting plantation (commercial) forestry rules are deleted; Correctly refer to the Resource Management (National Environmental Standards for Commercial Forestry) Regulations 2017 (Updated 3 November 2023); Correctly refer to 'commercial forestry' to be consistent with the updated NES-CF; Correct the Note after Rule WH.R19 on page 98 to refer to the NES-CF.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>does not see the proposed standards helping to manage more effectively the resource management issues encountered with commercial forestry. PC1 also provides for additional management practices and documentation for erosion and sediment control processes which are not occurring within 10m of a water body on areas identified by GWRC as having highly erodible soil. The level of assessment under Schedule 34 is above and beyond what is required under the NES-CF and are onerous and unnecessary for managing commercial forestry resource management issue.</p> <p>The requirement to progressively reduce and cease plantation (commercial) forestry beyond the next harvest on the highest erosion risk land and then to provide an objective to restore and revegetate the site, with a presumably native permanent woody species, is also strongly opposed. The submitter considers prohibiting forestry activity after the last harvest and then dictating through the schedule to not be able to consider other land uses for the site is a totally inappropriate use of the plan making tools available to manage resource management issues. It is an over-reaction and does not take into account the costs and benefits of this change in land use and property rights of land owners who undertake a forestry business on the land. There appears to have been no consultation with the Region's forestry industry in development of these provisions despite the significant impact it will have on the industry, the submitter's own operator was not consulted as well as</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>many of its contracting crews. The submitter also notes there are also a number of definitions which incorrectly refer to the Resource Management (National Environmental Standards for Plantation Forestry) Regulations 2017. This incorrect reference is used throughout the PC1 provisions. This name was changed to the Resource Management (National Environmental Standards for Commercial Forestry) Regulations 2017 on 03 November 2023, by regulation 4 of the Resource Management (National Environmental Standards for Commercial Forestry) Amendment Regulations 2023. Furthermore the submitters note the term 'plantation forestry' is used throughout PC1 and is not defined. References to 'plantation forestry' in the NES-CF have been changed to 'commercial forestry' as part of the amendment regulations, and for consistency PC1 should reflect these changes.</p> <p>Finally, the submitters have identified that the 'Note' following Rule WH.R19 on page 98 of PC1 incorrectly references the Resource Management (National Environmental Standards for Freshwater) Regulations 2020 instead of the Resource Management (National Environmental Standards for Commercial Forestry) Regulations 2017 (updated November 2023).</p>	
S210 Guildford Timber Company Limited, Silverstream Forest	S210.004	General comments - plantation forestry	Amend	Submitter is concerned that a number of provisions of PC1 that relate to plantation (commercial) forestry and vegetation clearance are incorrectly allocated as Freshwater Planning Process (FPP) provisions. The submitter considers it is unclear how plantation (commercial)	Seek that definitions, policies and rules related to plantation (commercial) forestry covered by the NES-CF be removed from the FPP process

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Limited and the Goodwin Estate Trust.				forestry activities in line with the NES-CF (2023) are allocated to the FPP. In particular, the submitter notes: The definition of Afforestation, Harvesting, Mechanical land preparation, Replanting, Vegetation Clearance for the purpose of the plantation (commercial) forestry rules, that all come from the NES-CF (updated November 2023) but have been allocated to the FPP. The primary aim of these is regulations is forestry not freshwater; Policy WH.P28; Rules WH.R20; WH.R21 and WH.R22 controlling plantation (commercial) forestry are all allocated to the FPP process; Rules WH.R17; WH.R18 and WH.R19 relating to vegetation clearance are all allocated to the FPP process.	
S212 Heather Phillips	S212.002	General comments - plantation forestry	Not Stated	Concern that PC1 does not mention wildfires as the likelihood is increasing through climate change and wildfires can have long-term effects, and there is no mitigation/planning/prevention of wildfires in the plan. Considers the plan promotes the continued plantation of pine trees (plantation forestry) on the highest erosion risk land for soil stabilisation, ignoring the greater danger of fire to the sediment retention requirements of the plan. Considers the Plan needs fire risk mitigation measures, including: Access to water (dams, tanks and spacing, size of same required) Setback requirements of ALL vegetation from powerlines Clear areas around houses and built up areas. Safety for escape routes Give knowledge of burn rates to tree species in New Zealand.	Not Stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

				member of the submitter's organisation will lose between 4% and 18% of productive area by forest, which equates to 330ha. The ETS Liability on this area at current prices is approximately \$18 million NZD.	
S262 Southern North Island Wood Council	S262.011	General comments - plantation forestry	Not Stated	<p>Considers there is insufficient evidence to suggest that:</p> <ul style="list-style-type: none"> - there is an issue with sediment produced from plantation forestry; - the NES-CF has led to more adverse environmental outcomes compared to the pre-2018 consenting regime; - that either forestry or the NES-CF are attributed to current water quality issues. <p>Disagrees with the s32 evaluation of the social costs for Options 1 and 3 being minimal, due to job losses in plantation forestry operations, at the port, and regional sawmills. Considers that the NES-CF is sufficient to manage sediment from forestry activities.</p>	Not stated
S262 Southern North Island Wood Council	S262.012	General comments - plantation forestry	Not Stated	<p>Considers the analysis of monetary implications in the s32 report is insufficient as it is feasible to estimate costs of resource consent applications, consent processing and monitoring, devaluation of forestry land, a decline in economic activity and forfeiture of income from timber and carbon credits. Considers s32 should explicitly acknowledge high and medium economic costs for Option 1 and Option 3, respectively.</p> <p>Notes further economic considerations, being devaluation of forest land; decline in economic activity; and loss of income from timber and carbon credits. Considers the economic costs for Option 1 (as evaluated in the s32 report) will be substantial, and</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				moderate for Option 3, both resulting in an overall "negative benefit".	
S263 New Zealand Carbon Farming Group ("NZCF")	S263.004	General comments - plantation forestry	Oppose	<p>Notes that PC1 acknowledges the NESCF came into force on 3 November 2023, but does not give explicit consideration to whether NESCF (and particularly amendments that strengthen the approaches to the management of adverse effects of forestry related activities) are able to achieve the stated outcome of PC1, being the reduction of sediment in rivers in the two Whāita's (inferred)</p> <p>Notes the NESCF is a national direction planning instrument and secondary legislation made under sections 43, 43A and 44 of the RMA. Noting the purpose and role in the hierarchy of RMA planning instruments, submitter considers it is important for Council to allow the NESCF to be appropriately implemented (including required monitoring). Considers it is premature for Council to promulgate a plan change to regulate production forest activities when new regulations have been made. Seeks PC1 is withdrawn (or the Proposed Plan Change is not included in the NRP) until such time as the efficiency and effectiveness of NESCF has been monitored and results of such monitoring support the need for provisions in NRP.</p>	Seeks PC1 be withdrawn (or the Proposed Plan Change is not included in the NRP) until such time as the efficiency and effectiveness of NESCF has been monitored and results of such monitoring support the need for provisions in NRP
S263 New Zealand Carbon Farming Group ("NZCF")	S263.005	General comments - plantation forestry	Oppose	<p>Submitter understands PC1 prevails over those regulations in NESPF listed in the 'Note' that accompanies the new Rules in Chapters 8 and 9. In terms of NESCF, the Section 32 Report states: "The National Environmental Standards for Commercial Forestry (NES-CF) will, from 03 November 2023, supersede the</p>	Seeks that PC1 is withdrawn (or the Proposed Plan Change is not included in the NRP).

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>NES-PF. The NES-CF will regulate commercial forestry activities for both carbon and timber production (plantation) forests. Plan Change 1 will introduce new provisions for forestry for the management of best practice to reduce sediment from sites. It is not expected that the NES-CF will impact on the approach being taken to manage forestry in Plan Change 1, and the new provisions will prevail over NES-CF rules."</p> <p>Submitter considers this gives rise to an issue in respect of whether the PC1 provisions prevail over NESCF. Considers provisions of PC1 cannot prevail over NESCF because this was not included in PC1 as notified. Does not consider this confusion can be remedied by simply replacing the acronym 'NESPf' with 'NESCF' without scope of PC1 being called into question.</p>	
S263 New Zealand Carbon Farming Group ("NZCF")	S263.007	General comments - plantation forestry	Oppose	<p>Acknowledges Te Whaitua te Whanganui-a-Tara Implementation Programme addresses plantation forestry as follows: "Plantation forestry can have benefits for water quality, but it also brings a high risk of sediment loss in the years after harvesting, particularly in the headwaters of Te Awa Kairangi/Hutt River. Unfortunately, the evidence we have heard suggests that good-practice sediment management in line with national rules is not yet being consistently used. This suggests a need to ramp up investigations of, and prosecutions for, poor management with greater accountability to communities affected by the consequences of poor practice."</p> <p>In response, the Implementation</p>	Seeks PC1 be withdrawn (or the Proposed Plan Change is not included in the NRP) and redrafted to reflect recommendations in the Implementation Plan.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Programme includes the following recommendation: "SUPPORTING BEST PRACTICE AND COMPLIANCE OF FORESTRY OPERATIONS Greater Wellington provides enough staff and resources to:</p> <ul style="list-style-type: none"> - Work with forestry groups (New Zealand Farm Forestry Association, New Zealand Forest Owners Association) and contractors to provide proactive advisory support that includes ensuring all forestry operators are aware (by 2023) of relevant regulatory requirements and good practice - Ensure all forestry operators in the whaitua are monitored for compliance with NES-PF and other relevant requirements from 2023 onwards, and share this monitoring information with the community - Take enforcement action on non-compliance. <p>Submitter considers that while purported to implement the recommendations in the Implementation Plan, PC1 does not resemble the recommendations. In this regard, the Implementation Plan relies on NESPF, whereas PC1 seeks to override it. Also notes, PC1 fails to acknowledge benefits for water quality from plantation forestry that have been identified in the Implementation Plan.</p>	
S263 New Zealand Carbon Farming Group ("NZCF")	S263.008	General comments - plantation forestry	Oppose	<p>Acknowledges the Te Awarua-o-Porirua Whaitua Implementation Programme 2019 concludes as follows: "Earthworks and forestry operations, if undertaken correctly and on suitable land, should result in minimal (if any) discharges of sediment to the streams and harbour. The challenge is to ensure all earthworks and forestry operations are</p>	Seeks PC1 be withdrawn (or the Proposed Plan Change is not included in the NRP) and redrafted to reflect recommendations in the Implementation Plan.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>undertaken on suitable land and using good practice and the risks of sediment-laden water running off-site is minimised." Notes the Implementation Programme includes a specific section that addresses forestry - refer to Section 10.3 Forestry and recommendations 54-57.</p> <p>Notes that while purported to implement the recommendations in the Implementation Plan, the PC1 does not resemble the recommendations. Considers Implementation Plan also relies on NESPF and explicitly acknowledges time should be allowed for NESPF to be implemented. Notes as per the Te Whaitua te Whanganui-a-Tara Implementation Programme, PC1 fails to respond to recommendations that emphasise engagement and monitoring. Submitter agrees the NESPF, and now the NESCF, should be given time to 'bed-in' before more stringent provisions are included in the NRP.</p>	
S263 New Zealand Carbon Farming Group ("NZCF")	S263.009	General comments - plantation forestry	Oppose	<p>Notes despite direction given in section 66 of RMA, PC1, including accompanying supporting documentation is silent on implications in respect of New Zealand's climate change response, and the contribution forestry makes to this response. That is:</p> <ul style="list-style-type: none"> - PC1 has not given any consideration to Emissions Trading Scheme, which is established and comprehensively managed under Climate Change Response Act 2002, including obligations and liabilities therein. For instance, the liability and costs for deforestation. - PC1 is directly contrary to New Zealand's Emissions Reduction Plan (made in accordance with section 5ZI of 	Seeks PC1 be withdrawn (or not included in the NRP)

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>the Climate Change Response Act 2002). The Emissions Reduction Plan includes an entire chapter (Chapter 14) that addresses forestry. Notes chapter identifies the following 'key actions' to support the role of forestry in meeting New Zealand's 2050 targets:</p> <p>"Support afforestation by:</p> <ul style="list-style-type: none"> - considering amendments to the New Zealand Emissions Trading Scheme (NZ ETS) and resource management settings to achieve the right type and scale of forests, in the right place - supporting landowners and others to undertake afforestation, particularly for erodible land - providing advisory services to land users, councils, Māori and other stakeholders to support choices for sustainable afforestation. <p>Encourage native forests as long-term carbon sinks through reducing costs and improving incentives.</p> <p>Maintain existing forests by exploring options to reduce deforestation and encourage forest management practices that increase carbon stocks in pre-1990 forests.</p> <p>Grow the forestry and wood processing industry to deliver more value from low-carbon products, while delivering jobs for communities."</p> <ul style="list-style-type: none"> - PC1 is not consistent with New Zealand's National Adaptation Plan (made in accordance with section 5Z1 of the Climate Change Response Act 2002) and does not consider implications of Actions 3.13 and 6.12. 	
S263 New Zealand Carbon	S263.010	General comments -	Oppose	Submitter considers that the Section 32 Report:	Seeks PC1 be withdrawn (or not included in the NRP)

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Farming Group ("NZCF")		plantation forestry		<ul style="list-style-type: none"> - fails to clearly identify Objective, or Objectives, the provisions of PC1 are to achieve and therefore does not support a conclusion that provisions are most appropriate; - does not include any evidence to support conclusions in respect of extent to which sediment in streams is reduced by various options that are evaluated; - fails to consider potential for sediment losses from land uses other than forestry, that is, potential for sediment losses to be greater where land is put to alternative uses; - does not address New Zealand's Emissions Reduction Plan (made in accordance with section 5ZI of the Climate Change Response Act 2002) as required by section 66 of the RMA and particularly does not consider contribution forestry makes to achieving New Zealand's emissions reduction target; - does not address New Zealand's National Adaptation Plan (made in accordance with section 5ZI of the Climate Change Response Act 2002) as required by section 66 of the RMA and particularly does not consider 'Action 6.12: Implement the Sustainable Land Management Hill Country Erosion Programme' and acknowledgement that afforestation can reduce soil loss; - does not consider efficiency or costs in respect of practical implications of Maps 92 and 95, that is, the cost of areas where forestry is prohibited by virtue of the maps causing the ability to use neighbouring land for forest to be prevented or constraint through ownership, scale, access and economic constraints; - fails to describe or set out the social 	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>costs of the various options that have been evaluated; - does not quantify the costs of the various options, including in respect of employment and the New Zealand Emissions Trading Scheme; and - does not provide any evidence or data to support the conclusion the environment is degraded as a result of the status quo, including the NESPF, and the existing policy framework is unsuccessful at achieving outcomes set by objectives in NRP, Implementation Plans or national instruments.</p> <p>Considers PC1 is flawed because the evaluation required under section 32(4) has not been completed or documented in the Section 32 Report. Considers the Section 32 Report is inadequate and fails to confirm the provisions are the most appropriate, efficient or effective means to achieve Objectives or give effect to higher order planning instruments.</p>	
S273 Robert Pavis-Hall, Gaynor Rowswell, Katie Norman, Megan Norman	S273.007	General comments - plantation forestry	Oppose	Notes that the largest area of Highest Risk Plantation is Regional Park and questions whether GWRC will fence off all the areas prone to erosion in the regional park and wonders how GWRC propose to pay for it.	Withdraw PC1 until new government has decided fate of PC1 .
S280 .Peter Handford	S280.002	General comments - plantation forestry	Not Stated	Considers forestry management can be applied where this a strong focus on environmental outcomes such as soil and water protection and biodiversity	Not stated.
S280 .Peter Handford	S280.003	General comments -	Not Stated	Concerns PC1 creates blanket exclusion for forestry rather than set out measurable	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		plantation forestry		outcomes across all land uses with identified monitoring approaches	
S280 .Peter Handford	S280.004	General comments - plantation forestry	Not Stated	<p>Concerns PC1 creates a blanket exclusion for "highest erosion risk" areas without recognising range of forest management options. Considers this removes potential for forest management to provide ecosystem services including biodiversity, carbon sequestration, soil and water protection and recreation.</p> <p>Considers Innovative and environmentally sensitive forest management approaches should be facilitated and encouraged as low impact forestry management is possible without negative impacts</p>	Not stated.
S288 China Forest Group Company New Zealand Ltd	S288.003	General comments - plantation forestry	Not Stated	<p>Notes major disparities between the whitua committee recommendations and PC1 rules. Notes the TAP committee considered more stringent rules for forestry to achieve the sediment objectives, but concluded the permitted framework of NESPF should be given time to be implemented, and that understanding and mapping erosion prone land at the local whitua scale was important to inform future planning. Notes that no recommendations were made by the TAP that plantation forests should be retired, nor the need identified for stringency beyond the (then) NES-PF. Notes that while recognising potential water quality risks from forestry, neither whitua committee recommended an explicit need to retire areas of production forestry. Notes neither whitua committee considered a need for major strengthening of the regulatory regime, but rather recognised the (then) NES-PF and urged a focus on education, implementation,</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				monitoring and enforcement where necessary. Notes the whitua recommendations sought close liaison between the sector and GWRC land management staff when looking at land use management planning around high-risk erosion sites. Notes neither whitua committee made recommendations to address an explicit link between forestry and water quality attribute standards or objectives.	
S288 China Forest Group Company New Zealand Ltd	S288.004	General comments - plantation forestry	Not Stated	"References data from monitoring sites and an ecological assessment which indicate very small proportions of the Pouewe Catchment-Horokiri have been exposed to potentially elevated levels of sedimentation above baseline from forestry activity, and that there is at least reasonable water quality. Considers it unlikely that forestry has led to the poor state of the Horokiri for the following reasons: - timing and scale of forestry activity - the small percentage of the catchment under harvest over the prior 20 years - large proportions of the catchment under closed canopy forest at any one time - the large percentage of the catchment under livestock management - immediate proximity of major highways and highway construction."	Not stated
S288 China Forest Group Company New Zealand Ltd	S288.005	General comments - plantation forestry	Not Stated	Cites aerial sequences and monitoring data which suggest the effects of harvesting have not been as significant as assumed, given harvesting and earthworks have been in train for an extended period until the latest published monitoring, and given assumed effects are expected to be cumulative downstream. Notes a survey which ranked the catchment as "average" and	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				likely representative of fish diversity. Notes almost all harvesting and earthworks undertaken in the contributory forest was undertaken prior to the NES-PF/CF.	
S288 China Forest Group Company New Zealand Ltd	S288.006	General comments - plantation forestry	Not Stated	Cites aerial sequences and monitoring data which suggest the effects of harvesting and earthworks have not been as significant as assumed, given harvesting and earthworks have been in train for an extended period until the latest published monitoring, and given assumed effects are expected to be cumulative downstream.	Not stated
S288 China Forest Group Company New Zealand Ltd	S288.007	General comments - plantation forestry	Not Stated	Cites aerial sequences and monitoring data which suggest factors other than harvesting are influencing lowered attribute states in the Te Awa Kairangi forested mainstems-Pakaratahi.r catchment, given there is no harvesting activity and there is a dominance of closed canopy vegetation within the catchment.	Not stated
S288 China Forest Group Company New Zealand Ltd	S288.008	General comments - plantation forestry	Not Stated	"Cites aerial sequences and monitoring data which suggest it is unlikely that plantation forest activities are a major factor in poor clarity and MCI attribute states within the Te Awa Kairangi rural streams-Mangaroa catchment, given there are low suspended sediments and the low proportion of the total catchment subject to recent or long-term harvesting and earthworks. Considers the long length of the main stem of the catchment proceeding through pastoral and agricultural land use is a more likely explanation. Notes the tributaries that are under pine forest were modelled at a higher status than the main stem and while this may reflect the harvesting status at the time the modelling was done, it also	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>reflects the established science that over a long time series, plantation forests will generate better water quality than current pastoral use.</p> <p>Notes an ecological report which detected the presence of fish, indicating that water quality in the small plantation tributaries are likely better than the main stem of the Mangaroa. "</p>	
S288 China Forest Group Company New Zealand Ltd	S288.009	General comments - plantation forestry	Not Stated	<p>"Recognises that forest harvesting and earthworks can locally and temporarily raise sediment levels during and immediately after operations. However, considers over the long-term, impacts on waterbodies are low and often trend towards baselines established for native forest areas. Notes forestry activities have been undertaken in preceding years in catchments displaying good water quality results. Notes harvesting occupies relatively small proportions of the total catchments for extended timeframes, and have not resulted in NoF attribute values declining below objectives. Further notes that due to the spatial layout of surrounds, expansion of plantations, other than onto farmland, is not possible.</p> <p>Notes council monitoring results in other catchments, particularly Horokiwi and Mangaroa, are relatively poor and while harvesting in portions of these catchments has been undertaken in recent years the proportions of the total catchment areas subject to harvest are low. Notes the waterbodies in these catchments pass through large proportions of pastoral agricultural land and in the case of the Horokiwi and its main tributary, remain close to long reaches of heavily used</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>highway and the earthworks associated with the recently completed Transmission Gully SH1. Considers it is highly likely given the current status of the streams, that a focus on the other land uses will generate the standards required notwithstanding that updated and upgraded attention to sediment controls in forestry earthworks is a legitimate expectation.</p> <p>Considers the temporal effects of forestry in relation to land use contaminant effects have not been recognised.</p> <p>Considers while all land use creates contaminant effects, a short term increase in adverse effects that then return to levels similar to natural baseline especially if assisted by other land use good practice, is very different to an adverse effect (even when mitigated by good practice) arising every day from a land use such as farming or urban use. By definition that becomes a permanent 'pressure' change to the environment. "</p>	
S288 China Forest Group Company New Zealand Ltd	S288.010	General comments - plantation forestry	Not Stated	<p>"Considers GWRC's assessments of the efficacy of the regulatory framework is based on standards that predate the current regime, noting forestry activity in some catchments has been ongoing since before the NES-PF and NES-CF. This includes first rotation planting that had no regulated riparian setbacks from streams or regulation related to harvesting around or over streams nor discharge permits.</p> <p>Notes neither whaitua committee recommended the introduction of stringent new rules, and instead advocated that the NES-PF is given time to adjust and bed in</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>backed up by, education, monitoring and where and if necessary, enforcement. Notes existing operations with constructive interactions between monitoring staff and forest management, including testing alternatives to achieve the best results possible.</p> <p>Notes most forestry companies review their plantable boundaries after harvest and as a result, most second rotation estates see increased non-productive reserve, retirements, and riparian areas, and in many cases riparian buffers are much larger than the minimum. Considers past retirements and riparian exclusions from previous operations reflect the sentiment of the whitua committees in respect of promoting good land use and land use decision making, education, and working with Council land managers to achieve good outcomes. Concerned that this existing work has not been recognised."</p>	
S288 China Forest Group Company New Zealand Ltd	S288.011	General comments - plantation forestry	Not Stated	<p>Considers there is no argument that earthworks at the time of harvest is the largest manageable contributor to sediment yield in forestry. These concerns were recognised in regulations of the NES-PF and NES-CF to target sediment generation, similar to the requirements of farm plans. Notes the requirement for erosion and sediment controls plans in Policy WH.P28(b), Rule WH.R20(b) and Schedule 34, which reference forest practice guides, which have had limited time to bed in. Notes that based on GWRC data, the state of stream water quality reflected the cumulative effects of activities predating the NES-PF. Considers the discharge standard of</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>100g/m3 does not relate to a particular stream attribute, topography, geology or soils of the whitua. Considers the standard is a uniform standard irrespective of activity or location/circumstance and appears to be principally designed around the use of point source discharges to water from large sediment capture and concentration ponds with fixed infrastructure or without flocculation, which cannot often be utilised in a forestry context. Considers the standard difficult to implement, does not deliver real-time feedback, and has no temporal component. Notes main methods for managing forestry earthworks as set out in forestry practice guides, and that discharges are largely diffuse. Considers the requirements for farm plans a corollary. Considers the visual clarity standard is more relevant to rural land use. Nevertheless, considers here is a perversity in the requirement for a lower decline in visual clarity in class 1 and schedule F1 rivers, as those rivers often come from areas inclusive of plantation forestry. Considers allowing higher clarity loss in lower quality rivers acknowledges continuation of higher levels of contaminants. Considers this area needs reconsideration and there should be an approach focused on education, training and where necessary enforcement, as recommended by the whitua committees, rather than new rules and variants of the NES-CF.</p>	
S288 China Forest Group Company	S288.012	General comments - plantation forestry	Not Stated	Considers there is little cognisance in PC1 of the spatial and temporal patterns of harvesting, and the influence this may or may not have on the attribute states of relevant catchments. Considers NPS-FW	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
New Zealand Ltd				<p>obligations have been relied on to avoid delaying actions notwithstanding incomplete information. Notes that from the data available, NoF targets were being met in catchments that are largely forested and where harvesting took place and are expected to continue to do so. Considers GWRC has overlooked that in catchments with a relatively small proportion of plantation, and where their reaches aligned with pastoral and urban infrastructure, there were poorer attribute results. Notes this conforms with NZ-wide trends that water quality attributes decline in order from undisturbed native forest, exotic forest, pastoral land use and urban. Considers GWRC has assumed that regulations for earthworks and harvesting under the NES-PF have no efficacy toward achieving the goals of the NPS-FW, but at the time of the published data being collected, the NES-PF was new and most of the harvesting that may have contributed to adverse freshwater outcomes had been undertaken in the prior decade. Considers GWRC have not considered that as forests progressed through their first to second rotations, normal practice and NES regulatory requirements saw provision of increased setbacks and retirement and reservation of problematic harvest areas. Concerned that while not all desired data was available, and an absence of such data was not a reason to avoid mitigatory actions, data that was available did not trigger a need or urgency for the whitua committees to recommend significant and stringent changes to the regulatory framework surrounding forestry.</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S288 China Forest Group Company New Zealand Ltd	S288.013	General comments - plantation forestry	Not Stated	<p>Concerned with the approach taken to define areas of "high erosion risk" and the application of those findings. Considers it impractical and will result in write-off of much larger areas than estimated by GWRC. Notes that predictions from cutover are likely to significantly overestimated yield in the universal erosion model. Notes research that confirms sediment contributions from poorly controlled earthworks outweigh those from the cutover.</p> <p>Concerned about the use of a lidar surface to inform the mapping of highly erosion prone areas, as lidar surface does not represent the underlying bedrock surface.</p>	Not stated
S288 China Forest Group Company New Zealand Ltd	S288.014	General comments - plantation forestry	Not Stated	<p>Considers the erosion susceptibility layers are based on information that excludes geological considerations and has not been peer reviewed.</p> <p>Considers the 5m2 resolution of the underlying lidar and the method applied will invariably be wrong, and a poor predictor of stability in the field, leading to areas being retired that were not at risk of slipping, as well as areas not being retired that may suffer landsliding in severe weather events.</p> <p>Considers the methodology for "Highest Erosion Risk - Plantation" has led to 'pixilation', which is impractical for forestry activities as rules could enable forestry in one patch and disallow it in an adjacent patch.</p> <p>Notes several factors which determine harvesting feasibility, resulting in more land needing to be retired than suggested</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				in GWRC data. Estimates that in the estate GFG manages, anything from an average of 9% up to 18% might be retired due to PC1 rules. Notes recommendations from whitua committees that could be applied to forestry, including developing site and property level plans with landowners, and funding and support for sediment mitigation activities.	
S288 China Forest Group Company New Zealand Ltd	S288.015	General comments - plantation forestry	Not Stated	Considers the total area of compulsory retirement could be substantially greater than assessed by GWRC. Concerned there is the potential for the total write-off of plantation sites, and that this should have been assessed in the s32 analysis.	Not stated
S288 China Forest Group Company New Zealand Ltd	S288.016	General comments - plantation forestry	Not Stated	Notes the rates relief set out in Method M44 are likely to be miniscule to zero, given the land will have no commercial value upon implementation of PC1. Considers advice should be free given the public interest being served. Concerned there is no meaningful certainty or long-term commitment, given the short-term nature of local body priorities.	Not stated
S288 China Forest Group Company New Zealand Ltd	S288.017	General comments - plantation forestry	Not Stated	Considers the obligations under the ETS have not been given consideration. Questions why a forest owner should pay for restocking an area for the benefit of the wider public, to avoid liabilities from a rule created in the wider public interest. Questions who will bear the cost and the liability of ongoing management of native forest reforestation and the risk and cost of a ETS compliant forest where reversion is the chosen route. Concerned non-harvest may be the best option for forest owners due to the cost of PC1 and lack of future economic land use options, and	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				questions who will compensate for stranded assets or potential liabilities if there is synchronous collapse. Considers proposed compensation and assistance methods are practically worthless.	
S3 Dougal Morrison	S3.006	General comments - rural	Not Stated	Considers the proposed erosion classification is unhelpful. Concerned the classification does not express the absolute risk, but rather the risk relative to all other agricultural land. Considers it better to use the ESC classification in the NES-CF.	Not stated.
S12 Horticulture New Zealand	S12.001	General comments - rural	Not Stated	Proposed rules restricting rural land use change would make crop rotation impossible, which is an essential horticultural management practice for soil health and reducing disease pressure. Notes that planting vegetables or cover crops with differing nutrient needs in succession can reduce fertiliser requirements. Considers that it can be appropriate to change land use from low-intensity horticulture (orcharding) to other horticulture use (vegetable growing). Suggests a permitted activity status for a change from horticulture to horticulture and for crop rotation is more appropriate. Considers that a change in pastoral land use to horticulture will contribute to the reduction of greenhouse gas emissions and should be enabled to achieve regional emissions targets. Considers National Direction does not restrict the conversion of land to horticulture due to freshwater concerns but rather recognises vegetable growing as nationally significant through Specified Vegetable Growing Areas (National Policy Statement for Freshwater Management, Clause 3.33). The National Environmental Standards for Freshwater does control the intensification of dairy	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				farming, but not other activities. Considers proposed land use change rules to be inefficient and ineffective. Considers a targeted approach that considers catchment contaminants and targeted mitigations for the highest contributing activities is more appropriate. Considers that most vegetables are grown only for domestic consumption and it is not expected that vegetable growing will expand at a faster rate than population growth. Considers that restricting vegetable production will have nutritional and affordability consequences.	
S17 John Easter	S17.018	General comments - rural	Not Stated	Considers mandated retirement of erosion prone pastoral land into permanent forest must be a regional/national responsibility planned and funded in accordance with a risk based regional plan.	Not stated.
S17 John Easter	S17.019	General comments - rural	Not Stated	Feels compensation for land retirement, covering loss of production and income and options for property purchase, should be included within the plan change or supporting regulation before plan change is implemented.	Not stated.
S17 John Easter	S17.021	General comments - rural	Not Stated	Assumptions of silt leading to afforestation or mandated retirement of pastoral land must be replaced with evidence from sub catchments and tributaries.	Not stated.
S17 John Easter	S17.025	General comments - rural	Not Stated	Not Stated	Not stated.
S17 John Easter	S17.026	General comments - rural	Not Stated	Concerned that any use of streams including recreational uses will exceed requirements in PC1 and the PC1 provisions are unrealistic and not based on evidence.	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
es - Lenard Drabble				due to a lack of supporting evidence. States that the s32 report identified that stocking rates and stock numbers are low, amounts of nitrogen fertiliser used are low, there is a low opportunity to reduce nitrogen discharges, and recommendations that gorse fixes nitrogen leaching are incorrect. Also states that there is no evidence to support statements that on-site wastewater systems can be a source of nitrogen losses. Gorse fixes nitrogen and has been found to leach as much nitrogen as a dairy farm. Highlights that proposed measures will have substantial costs and may result in minimal water quality improvements.	
S62 Upper Hutt Rural Communities - Jacqui Thompson	S62.006	General comments - rural	Not Stated	Considers there to be no data on water quality gathered within the Mangaroa catchment and the Akatarawa catchment. States that the headwaters of the catchments are located 20km from the monitoring points. Considers there to be a lack of understanding on how and where contaminants are entering water and that GWRC is assuming the source of contamination is farming activities/human activity. Considers GWRC need to understand where and how sediment and contaminants are entering water bodies. Recommended the Mangaroa and Akatarawa catchments, at least 3 monitoring points should be established to identify the source of any quality reduction.	Defer any further action on PC1 pending gathering an effective database.
S62 Upper Hutt Rural Communities - Jacqui Thompson	S62.011	General comments - rural	Not Stated	Questions the justification for measures targeting Mangaroa Valley, Akatarawa Valley, and other farming communities due to a lack of supporting evidence. States that the s32 report identified that stocking rates and stock numbers are low,	Withdraw measures in PC1 targeted towards the Upper Hutt farming community.

Defer any further action on PC1 pending gathering an effective database.
S81 Upper Hutt Rural Communities - David McCready	S81.011	General comments - rural	Not Stated	Questions the justification for measures targeting Mangaroa Valley, Akatarawa Valley, and other farming communities due to a lack of supporting evidence. States that the s32 report identified that stocking rates and stock numbers are low, amounts of nitrogen fertiliser used are low, there is a low opportunity to reduce nitrogen discharges, and recommendations that gorse fixes nitrogen leaching are incorrect. Also states that there is no evidence to support statements that on-site wastewater systems can be a source of nitrogen losses. Gorse fixes nitrogen and has been found to leach as much nitrogen as a dairy farm. Highlights that proposed measures will have substantial costs and may result in minimal water quality improvements.	Withdraw measures in PC1 targeted towards the Upper Hutt farming community.

				amounts of nitrogen fertiliser used are low, there is a low opportunity to reduce nitrogen discharges, and recommendations that gorse fixes nitrogen leaching are incorrect. Also states that there is no evidence to support statements that on-site wastewater systems can be a source of nitrogen losses. Gorse fixes nitrogen and has been found to leach as much nitrogen as a dairy farm. Highlights that proposed measures will have substantial costs and may result in minimal water quality improvements.	
S111 Forest Enterprises	S111.004	General comments - rural	Oppose	<p>Considers a lack of justification and definition for erosion prone land.</p> <p>Considers catchment management critical for positive environmental outcomes and cites supporting reports on catchment management.</p> <p>Notes in the LUC, classes six and seven are recommended for forestry as soil conservation is needed in comparison to arable cropping.</p> <p>Considers the erosion risk land maps, for pasture, woody vegetation, and plantation forestry, ignore geology and other elements which provide land stability.</p> <p>States the Section 32 report part D page 110 defines erosion prone land as pre-existing slope of the land exceeding 20 degrees. Notes LUC defines slope of greater than 20 degrees as strongly rolling to hill country and as non-arable land, whereas a slope less than 20 degrees is arable and appropriate for cropping and intensive farming. Considers making</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>afforestation or planting a prohibited activity on slope greater than 20 degrees, pastoral farming will be encouraged on land which it is not suitable for (where grass has a much shallower root profile in comparison to plantation tree species) causing further erosion and sediment discharge.</p> <p>Considers forests are often located on land steeper than 20 degrees and are a productive land use on such sites, with adverse effects regulated by NESCF.</p>	
S180 William Gill	S180.002	General comments - rural	Not Stated	Expresses concern that PC1 will result in the loss of the majority of their farm, due to high-risk erosion provisions; lower slopes provisions; SNAs; forestry activities; and land retirement requirements.	Not stated
S182 Susan Boyle	S182.008	General comments - rural	Not Stated	Concerned PC1 does not address how GWRC will manage its own land including natural sediment movement on the land, streams being controlled by natural gravity and animal movements on the land and in streams. Also concerned that GWRC activity on the land has impacts on waterways and streams, particularly as a result of 1080 drops.	Withdraw PC1
S188 Wellington Fish and Game Regional Council	S188.009	General comments - rural	Not Stated	Considers aquatic ecosystem health and wellbeing depends on managing diffuse discharges of nutrients and E. coli from farming activities. If current land use inputs of nutrients are not known, more conservative limits will need to be set to ensure the target reductions are achieved. Outcomes for Dissolved Inorganic Nitrogen concentrations should be set around 0.3 - 0.6 mg/L, and median Dissolved Reactive Phosphorus concentrations should be set at around	<p>Seeks Dissolved Inorganic Nitrogen concentrations be set at 0.3 - 0.6 mg/L, and median Dissolved Reactive Phosphorus concentrations be set at 0.01 - 0.02 mg/L (Canning et al 2021).</p> <p>Seeks a comprehensive, regular, and frequent monitoring programme needed to assess concentrations of nutrients throughout catchment.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				0.01 - 0.02 mg/L (Canning et al 2021), supported by a monitoring programme.	
S193 Wairarapa Federated Farmers	S193.003	General comments - rural	Not Stated	<p>Concerned to see 'blanket' policies and rules proposed that will be implemented at property level with severe implications for rural landowners, including requiring them to retire certain classes of land from pastoral and plantation forestry use and undertake expensive riparian management measures.</p> <p>Considers there is insufficient evidence supporting these policies and rules, and the proposed policies and rules will not get us any closer to achieving the TASs.</p>	Not Stated
S193 Wairarapa Federated Farmers	S193.009	General comments - rural	Oppose	<p>Concerned about the erosion risk land modelling and how the Council intends to use it to underpin policies to retire land from pasture and plantation forest. Agrees with Easton et al that site-specific assessments must be undertaken to ground-truth the model.</p> <p>Considers the policy requiring the establishment of permanent woody vegetation cover on at least 50% of highest erosion land (pasture) within 10 years and 100% by 2040 to be overly onerous to landowners and impractical to implement. Considers this a policy of managed retreat to attain a public good and is an intrusion into private property rights.</p> <p>Considers the policy creates an equity issue, as proposed policies and rules in urban areas of the whaitua generally apply at a municipal level (they don't directly impact individual households or businesses), and costs can be debt funded across multiple generations of</p>	Not Stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>ratepayers. In comparison, policies and rules proposed for rural areas of the whitua impact individual landowners with considerable costs being incurred within the next 17 years.</p> <p>Consider the policy may be palatable if the timeframes were extended to a reasonable period and landowners, in a voluntary capacity, could receive full compensation for areas of their land that would no longer be available for farming. Concerned the adoption of this policy will affect the on-farm income of landowners as it reduces options for economic use for landowners and will likely impact property values, making it harder for these properties to be sold and reducing their sale price.</p> <p>Submitter references Evans et al who argue that a change in government policy that denies property owners the ability to make an economically viable use of that property in the use for which it was purchased represents a de-facto taking that requires compensation.</p> <p>Concerned the cost of fencing, pre-planting preparation of land, purchase of seedstock, planting, watering, fertilising and weed and pest control will be picked up by farmers. Identifies there will be challenges sourcing sufficient seedstock for planting, finding labour to plant native seedstock and sourcing and paying for specialist advice to ensure new plantings occur in a way that is consistent with the Emissions Trading Scheme (ETS) eligibility criteria so as to avoid plantings being ineligible for New Zealand Units</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>(NZUs).</p> <p>Notes the policy vaguely mentions that WRC will provide 'support' to landowners and if this support will be comprehensive it is likely to be costly for ratepayers. Considers the support of landowners (i.e. financial compensation for the loss of production, the costs associated with planting land in permanent forest, and ongoing maintenance of those areas) is of such importance that a policy is required that is explicit in the extent, timing and delivery of such assistance and includes a full buy-out option.</p> <p>Considers the statement in the s32 report that the separation of highest erosion risk land and soil conservation treatment of high erosion risk land may provide for minor increases in farm productivity has no rational basis and ignores the Council's other policies which cap nutrient discharges from farming activities, effectively limiting further intensification.</p> <p>Considers the area (ha) of land within the highest erosion risk land map at a farm scale is significant for some properties. Some members estimate they could lose a third of their property under this policy.</p>	
S193 Wairarapa Federated Farmers	S193.010	General comments - rural	Oppose	<p>Opposes policies and rules that require the 'blanket' mandatory retirement of private land to manage potential sediment loss. Suggests non-regulatory incentives and support should be used to achieve the restoration and enhancement of the natural ecosystems as discussed in Hearing Stream 3 for the RPS. References comments in the s42A report</p>	Not Stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>that regional plans cannot require landowners or others to plant forest or restore and extend wetlands, the recommended amendment to Method CC.4 to use a partnership approach, with mana whenua and other key stakeholders, and specific recommendations in relation to the Regional Forest Spatial Plan.</p> <p>Supports an integrated catchment approach to the management of sediment loss, supported by the Council and underpinned by non-regulatory methods such as FAPs and Regional Forest Spatial Plans. Considers this approach provides an opportunity for the Council to demonstrate best practice regarding the management and protection of natural ecosystems including freshwater ecosystems. Suggests Council can use their own farmland as an exemplar to communities and develop, in partnership with private landowners, innovative solutions to targeted at-risk areas.</p>	
S193 Wairarapa Federated Farmers	S193.011	General comments - rural	Oppose	<p>Concerned about the dSedNet modelling to estimate the sediment load reductions required from catchments to meet the TASs for visual clarity. Considers there is too much uncertainty and error for the model output to be used as a basis for policy decisions that will impact farming businesses. References Greer et al 2023 to support concerns regarding the limitation of modelling and data collected.</p> <p>Considers the sediment load reduction modelling relies on data that is spatially and temporally limited. In particular, water quality monitoring sites were noted as being limited. Notes that the proportional</p>	Requests council improves the quality and quantity of their monitoring data to inform the dSedNet modelling before any changes to policies and rules in the NRP are made.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>change in sediment load required to meet visual clarity targets in Te Awarua-o-Porirua was estimated using data from three sites.</p> <p>States that one monitoring site can not yield data that is representative of all water bodies in a catchment. For example, the Mākara Stream at Kennels monitoring site is used to determine water quality for 7203 ha and Mangaroa River at Te Marua is used to determine water quality for 10,370 ha.</p> <p>Notes the 'MFE Guidance for Implementing the NPS-FM Sediment Requirements' comments that within the modelling process, a small error in input data can result in a substantial error in outputs and that there are errors in load estimations from monitored water quality and flow data particularly, when it's restricted to monthly grab samples. Notes that MFE's advice is to improve the current level of sediment monitoring and to collect flow data concurrently at sediment monitoring sites. Also cites Whaitua-Te-Whanganui-a-Tara-Water-Quality-and-Ecology-Scenario-Assessment a 2020 by Aquanet which was part of the information considered by the Te Awarua-o-Porirua whaitua committee and the uncertainties in the information available.</p> <p>Notes that clause 1.6(2)(b) of the NPS-FM requires councils to take all practicable steps to reduce uncertainty and clause 1.6(1) requires councils to use, if practicable, complete and scientifically robust data. Concerned the data used to</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>model the sediment load reductions is neither complete nor scientifically robust and is inadequate to underpin significant shifts in policy that have severe consequences for rural landowners.</p> <p>References the Whaitua-Te-Whanganui-a-Tara-Water-Quality-and-Ecology-Scenario-Assessment as evidence of the uncertainties in the information available on the effectiveness of erosion control measures to reduce sediment loads and modelling of this completed.</p> <p>Contends that the data used to model the sediment load reductions is neither complete nor scientifically robust (contrary to clauses 1.6(1) and 1.6(2)(b) of the NPS-FM) and is inadequate to underpin significant policy shifts that have severe consequences for rural landowners.</p>	
S193 Wairarapa Federated Farmers	S193.015	General comments - rural	Amend	<p>Considers the generally low N concentrations throughout the rural areas of the two whaitua are partly due to the type of farming completed in the catchments (mixed sheep and beef farms that are not intensively farmed). Considers these properties typically have a lower N footprint than other types of farming and the risk of dissolved inorganic nitrogen (DIN) polluting waterways is very low.</p> <p>Notes the s32 report articulates that hill country farms in the two whaitua apply little if any nitrogen and overall, stocking rates are very low. Questions why the proposed policies are to manage N loss reductions by land retirement and destocking (as a response to the need to reduce sediment loss), even though</p>	Not Stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				monitoring shows that river and stream surface water bodies are almost all within the NOF 'A' Band for nitrate toxicity and ammonia toxicity.	
S193 Wairarapa Federated Farmers	S193.019	General comments - rural	Not Stated	<p>Concerned the term FEP is being used interchangeably with the nationally mandated FWFP. Recommends references to FEPs in the proposed NRP are amended to FWFPs for consistency, and to avoid 'double-up' (two separate plans being required for the one property) and confusion.</p> <p>Supports the use of FWFPs to identify and manage on-farm risk to freshwater contamination</p> <p>Opposes the dates for FEPs in Tables 8.6 and 9.5 for the following reasons: a. FWFPs are not required to be prepared by these dates as part of the national roll-out. Doubts the dates will be achievable. b. The highest priority for freshwater improvement should be urban catchments with a specific focus on improving E. coli.</p>	<p>Remove Tables 8.6 and 9.5 from the proposed NRP.</p> <p>Amend the timing for the nationally mandated FWFPs to be as determined in the national roll-out timeline.</p> <p>Make any consequential amendment(s) necessary to give effect to the relief sought.</p>
S194 Urban Edge Planning Group on behalf of Mangaroa Farms Ltd	S194.002	General comments - rural	Neutral	Broadly supports framework for rural land use activities noting that it generally aligns with the regenerative farming practices undertaken and supported by submitter.	<p>Seeks the following:</p> <ul style="list-style-type: none"> -Ensure the provisions relating to unplanned greenfield development do not relate to development occurring in the rural environment, including the Rural Lifestyle Zone. -Amend activity status of WH.R22 from prohibited to non-complying. -Any consequential changes or alternative relief required to achieve the intended outcomes sought within this submission.
S195 New Zealand Farm Forestry	S195.012	General comments - rural	Not Stated Oppose	Considers the S32 reports assumption that the NES-CF is focussed on including carbon forestry in the national environmental standards and therefore the PC1 provisions are justified, is	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Association (NZFFA)				incorrect. Considers the NES-CF focuses on stronger environmental protection For example it has new requirements for Afforestation Plans to manage erosion and sedimentation and Harvest Management Plans.	
S202 Graeme Iain Shellard , Sarah Elizabeth Shellard, Cameron Anthony Shellard, Finlay David Shellard Graeme Shellard	S202.001	General comments - rural	Not Stated	(refer to raw submission for screenshot of question and answer from consultation) Considers the logic applied by the Council is fundamentally flawed and demonstrates a bias. Considers that there should be a representation of other land uses, and their expected contribution - including forestry and wildlife - on Colletts Stream catchment. Notes there are more wild deer, pigs, possums and potentially goats than farmed cattle, pigs and sheep. Considers it untrue that because lifestyle blocks have better pasture, they have higher stock levels per hectare. Considers the plan is targeting lifestyle blocks based on an inference, an unvalidated assumption and the exclusion of other causes of the problem. Considers the lack of information will incur significant regretful spend.	Withdraw PC1. Develop and implement improvements through community-based support / education supported by measurements and reporting
S203 Peter Thomson	S203.003	General comments - rural	Not Stated	Notes the majority of rural landscape is bush and plantation forest and the vast majority of the water catchment in Upper Hutt is publicly owned. Notes the Section 32 report (Section 6.9 Sources of nitrogen and other contaminants) notes that stocking rates are low, even for the classes of land grazed and that absolute stock numbers are low.	Remove stocking rates specifically for Amendments to Chapter 8 - Whaitua Te Whanganui-a-Tara.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Notes presence of wild animals, deer and wild pigs in the region and on GWRC and DOC land, considers the animals likely to cause contamination of fresh water will be dominated by wild deer and pigs on GRWC's own land. Considers that GWRC do not have good practices for fresh water management on their land and suggests the impact of livestock is not material in respect to the quality of the fresh water in Upper Hutt.	
S205 Kelly & Lewis Few-Mackay	S205.004	General comments - rural	Not Stated	Considers the section 32 report establishes that none of the measures aimed at the Mangaroa Valley and Akatarawa Valley farming community in section 6.9 are justified. Considers the proposed measures will achieve little at an unquantified cost.	Withdraw all measures targeted at the Upper Hutt farming/lifestyle block community.
S212 Heather Phillips	S212.005	General comments - rural	Not Stated	Concern that pest animals and wild animals are not to be counted as stock units, despite grazing on local land and causing erosion damage. Concern that pests animals are not dealt with in plan change.	Not stated
S225 Upper Hutt City Council	S225.012	General comments - rural	Oppose	Not stated	Delete unnecessary requirements for rural properties, particularly smaller properties (between 4-20 ha);
S234 David and Pauline Innes	S234.006	General comments - rural	Oppose	Objects to the stock number limitation as not appropriate for a rural area. Considers the limitations on stock do not seem to take adequate account of the differences in the effect on waterways of different stock types.	Not stated
S249 Isabella Cawthorn	S249.008	General comments - rural	Not Stated	Request having a reference to the guidelines for Beneficial Use of Organic Materials on Productive Land (due next year) as a minimum	Provide a reference to the guidelines for Beneficial Use of Organic Materials on Productive Land as a minimum

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S273 Robert Pavis-Hall, Gaynor Rowswell, Katie Norman, Megan Norman	S273.003	General comments - rural	Oppose	Queries whether animals that are not cattle, farmed deer and farmed pigs are exempt from PC1. Questions how wild deer, pigs and goats will be managed.	Confirm rules related to other animals (outside of cattle, farmed deer and farmed pigs). Control pest species being pushed from GWRC land to private land property.
S273 Robert Pavis-Hall, Gaynor Rowswell, Katie Norman, Megan Norman	S273.004	General comments - rural	Oppose	Holds concerns surrounding the lack of evidence that waterway contamination comes from farming activities and that it falls to landowners to test and prove the opposite. Suggests urbanised areas and major roads should be looked at first	Attribute contamination levels to urbanised areas rather than farming activities and act accordingly.
S276 Jody Louise Sinclair, Joshua William Lowry, Anne Friedarika Sinclair & Tracey Lynn Browne	S276.006	General comments - rural	Oppose	Considers GWRC do not know where sediment originates from and are guessing that it comes from farming activity and making the assumption that all sediment in rivers is the result of human activity. Considers it is important to take into account that a proportion arises from natural erosion processes and that it's important to form a complete picture of all factors within the catchments, both natural and man made. Considers within each of the Mangarua and Akatarawa catchments GWRC should establish at least 3 monitoring points and accrue a significant data base to be able to identify the source of any quality reduction.	Within each of the Mangarua and Akatarawa catchments, establish at least 3 monitoring points and accrue a significant data base to be able to identify the source of any quality reduction. Defer any further action on PC1 pending the gathering of an effective database.
S276 Jody Louise Sinclair, Joshua William	S276.008	General comments - rural	Oppose	Considers there is insufficient data to identify the point of origin of any contamination and PC1 requires registered farms to collect the data for GWRC at no cost to GWRC.	Move away from attributing contamination problems to farming and re-focus on the more complex issues of urban sources.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Lowry, Anne Friedarika Sinclair & Tracey Lynn Browne				Considers there are indicators from primary contact sites along the Hutt River that paint a clear picture and suggests this establishes that whatever contamination is present in the lower reaches is not originating from the farming communities of Akatarawa and Mangaroa. Suggests a disproportionate amount of effort in trying to solve a problem that does not exist.	
S276 Jody Louise Sinclair, Joshua William Lowry, Anne Friedarika Sinclair & Tracey Lynn Browne	S276.010	General comments - rural	Oppose	Considers section 6.9 of the Section 32 report - (Sources of nitrogen and other contaminants) establishes that none of the measures aimed at the Mangaroa Valley and Akatarawa Valley farming community are justified. Considers the proposed measures will achieve little at an unquantified cost.	Withdraw all measures targeted at the Upper Hutt farming community.
S276 Jody Louise Sinclair, Joshua William Lowry, Anne Friedarika Sinclair & Tracey Lynn Browne	S276.012	General comments - rural	Oppose	Considers the proposed stocking unit is unreasonable and the allocation of SU/HA is too low, especially compared to other regions.	Remove the proposed stocking unit rate and allocation from the plan.
S277 Craig Innes	S277.005	General comments - rural	Oppose	Objects to the stock number limitation as not appropriate for a rural area. Considers the limitations on stock do not seem to take adequate account of the differences in the effect on waterways of different stock types.	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S281 Kirsty Gill	S281.004	General comments - rural	Oppose	Concerned the GWRC has erroneously identified land as "erosion prone". Considers it unacceptable for GWRC to require landowners to retire land without compensation.	Not Stated.
S287 M. Garcia	S287.006	General comments - rural	Oppose	Considers GWRC do not know where sediment originates from and are guessing that it comes from farming activity and making the assumption that all sediment in rivers is the result of human activity. Considers it is important to take into account that a proportion arises from natural erosion processes and that it's important to form a complete picture of all factors within the catchments, both natural and man made. Considers within each of the Mangaroa and Akatarawa catchments GWRC should establish at least 3 monitoring points and accrue a significant data base to be able to identify the source of any quality reduction.	Defer any further action on PC1 pending gathering an effective database.
S287 M. Garcia	S287.007	General comments - rural	Oppose	Notes that the only animals referenced are cattle, farmed deer and farmed pigs and in the absence of any other stock being mentioned, considers that all such other animals are exempt from all rules.	Confirm that the rules are exclusive to these animals.
S287 M. Garcia	S287.008	General comments - rural	Oppose	Notes that land owners are required to furnish a complex range of data including average stocking rates, calculate effective grazing areas, map the property boundaries, show waterbodies where stock exclusion is required, show the location of fences relative to the waterbodies and calculations relating to Nitrogen emitting from the property Considers there will be very few in the community who will have the level of expertise required to gather and present the range of data required or produce	Delete the requirement for farms of 4 ha to register with GWRC . Require GWRC to have the necessary systems and applications in place prior to promulgating regulation that will not function appropriately without those systems. Confirm whether GWRC staff members have the authority to commit GWRC to a course of action which may be at variance to the letter of the drafted regulations.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>accurate maps. Notes GWRC have not yet produced the systems necessary to record the information. Concerned that resource consent application takes time, costs money and is beyond the technical abilities of most individuals and there is no guarantee that it will be approved or it may contain onerous conditions.</p>	
S287 M. Garcia	S287.010	General comments - rural	Oppose	<p>Considers there is insufficient data to identify the point of origin of any contamination and PC1 requires registered farms to collect the data for GWRC at no cost to GWRC. S2 Horokiwi Quarries Ltd	S2.005	General comments - stormwater management	Amend	<p>States the current rule framework categorises quarrying activities as a form of "high-risk industrial or trade premise, " quarrying activities are subject to the following: - Rule WH.R4 - Rule WH.R11 - Rule WH.R12</p>	Insert new Rule WH.R4A as follows: Rule WH.R4A: Stormwater from quarrying activities - permitted activity The discharge of stormwater from a quarrying activity into water, or onto or into land where it may enter a surface water body or coastal water, including where it is associated with the use of land for the creation of new, or redevelopment of existing impervious surfaces,

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>- Rule WH.R13</p> <p>The submitter has significant concerns with the framework as quarrying activities are not recognized, will incur consenting implications, and provide few consenting pathways. The submitter questions if the framework is intended to apply as it does since the S32 contains no consideration of quarrying activities.</p> <p>Concerned reasonable activities (replacement of a concrete pad, or roof) will require consent despite the scale of the activity or whether there was an associated discharge. Submitter notes that operational stormwater discharges on their site would likely not meet the permitted rule and therefore, require consent as a non-complying activity.</p> <p>Requests a rule consistent with the RPS, which recognises the benefits of the region's mineral resources and seeks to enable the ongoing use of the resources.</p> <p>Supports the insertion of the following quarrying rules</p> <ul style="list-style-type: none"> - A permitted activity rule that applies to all stormwater discharges from a quarrying activity, and - A restricted discretionary activity that applies where the permitted rule is not met and is subject to the stormwater discharge continuing to meet relevant target attribute states. <p>States this approach is similar to that taken in Rules WH.R8, WH.R9, and WH.R10 when providing for airports and roading.</p>	<p>is a permitted activity, provided the following conditions are met: (a) the discharge is not from, onto or into SLUR Category III land, unless the stormwater does not come into contact with SLUR Category III land, and (b) the discharge does not contain wastewater, and (c) if the discharge is to land where it may enter groundwater, (i) the discharge cannot cause or exacerbate the flooding of any other property, and (ii) the discharge is not located within 20m of a bore used for water abstraction for potable supply or stock water, and (d) if the discharge is into a surface water body or into coastal water the concentration of total suspended solids in the discharge shall not exceed: (i) 50g/m³ where the discharge enters a site or habitat identified in Schedule A (outstanding water bodies), Schedule C (manawhenua), Schedule F1 (rivers/lakes), Schedule F3 (identified natural wetlands), Schedule F4 (coastal sites), or Schedule H1 (contact recreation), or (ii) 100g/m³ where the discharge enters any other water, (e) the discharge shall also not cause any erosion of the channel or banks of the receiving water body or the coastal marine area, and (f) the discharge shall also not give rise to the following effects beyond the zone of reasonable mixing: (i) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials, or (ii) any conspicuous change in the colour, or (iii) a decrease in water clarity of more than 1.20% in a River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or 2.30% in any other river, or (iv) any emission of objectionable odour, or (v) the freshwater is unsuitable for consumption by farmed animals, or (vi) any significant adverse effects on aquatic life. Insert new Rule WH.R8A as follows: Rule WH.R8A: Stormwater from a quarrying activity - restricted discretionary</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					<p>activityThe discharge of stormwater from a quarrying activity into water, or onto or inland where it may enter a surface water body or coastal water, including where it is associated with the use of land for the creation of new, or redevelopment of existing impervious surfaces, is a restricted discretionary activity where:(a) Rule WH.R4A cannot be met, and(b) the target attribute state for copper and zinc in Table 8.4 is met for a relevant part Freshwater Management Unit, and(c) the coastal water objective for copper and zinc in Table 8.1 is met in the relevant coastal water management unit.Matters for discretion1. The management of the adverse effects of stormwater capture and discharge, including on aquatic ecosystem health and mahinga kai, contact recreation and Māori customary use2. The management of effects on sites identified in Schedule A (outstanding water bodies), Schedule B (Ngā Taonga Nui a Kiwa), Schedule C (manawhenua), Schedule F (indigenous biodiversity)3. Minimisation of the adverse effects of stormwater discharges4. Provision for hydrological control measures where discharges will enter a surface water body (including from an existing local authority stormwater network).</p>
S2 Horokiwi Quarries Ltd	S2.008	General comments - stormwater management	Oppose	Considers financial contributions should not be a mandatory means of providing for aquatic offsetting, and resource consent applicants should have the opportunity to provide aquatic offsetting or compensation in accordance with Appendix 6 or 7 of the NPS-FM as part of their proposal.	Not stated
S17 John Easter	S17.022	General comments - stormwater management	Not Stated	Considers the production of peak runoff to be a greater risk to the community than potential production of silt.	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S101 Wellington International Airport Limited	S101.005	General comments - stormwater management	Oppose	<p>Notes that the submitter has secured a site wide stormwater discharge permit which provides for all stormwater discharges from activities and areas within the Airport boundary, and has prepared a comprehensive stormwater management plan as part of the consent.</p> <p>The stormwater discharge permit was granted under Rule R54 of the Operative NRP, which the submitter considers is effective in that it encourages WIAL to actively manage its stormwater discharges in an integrated and comprehensive way.</p> <p>The submitter therefore supports the retention of the Operative approach in the Proposed NRP and considers that further amendments are required to various rules within the Proposed NRP to reflect the Operative NRP approach.</p>	Not stated
S101 Wellington International Airport Limited	S101.007	General comments - stormwater management	Oppose	<p>Notes the operational and functional requirements of some regionally significant infrastructure necessitate large areas of impermeable surfaces which stormwater management systems are typically included into.</p> <p>Notes submitter has recently secured a site wide stormwater discharge permit and given the measures being implemented by the submitter and its contribution to reducing the overall effect it is having on (ultimately) coastal water quality, it does not seem reasonable or equitable to require financial contributions for any "residual effect".</p> <p>Considers the contribution in Schedule 30 is payable for an effect that does not necessarily arise as a result of the activity that resource consent is being sought for and this is inappropriate and unlawful.</p> <p>WIAL opposes the proposed introduction</p>	Delete financial contributions provisions in their entirety.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				of financial contributions and considers they should be deleted in their entirety.	
S107 Friends of Waipāhihi Karori Stream	S107.004	General comments - stormwater management	Support	Supports all provisions which require development that increases impermeable surfaces to achieve neutral or lesser stormwater runoff compared to pre-development. Notes that stormwater retention is necessary to avoid flashy rainfall runoff.	Not stated
S151 Wellington Water Ltd	S151.001	General comments - stormwater management	Amend	Concerned the PC1 policies and rules are not sufficiently enabling, and in some instances are not feasible to implement.	<p>Amend policies and rules to: Clearly provide for stormwater and wastewater discharges from local authority networks as a restricted discretionary activity, without this status being jeopardised by subjective assessments of the merits of the SMS or WNCIS, or non-complying activity rules in other parts of the NRP.</p> <p>Provide guidance on the matters to be considered in prioritising sub-catchments for improvement works, while also ensuring sufficient flexibility to take account of practical matters such as investment availability and efficiencies and alignment with other workstreams (including wastewater improvement works).</p> <p>Allow matters of detail to be specified in sub-catchment SMPs and SIPs, rather than in the initial SMS and WNCIS.</p> <p>Provide flexibility for determining the load reductions required in order to appropriately contribute to meeting the TAS (in light of our present concerns with the TAS, lack of information as to baseline states in many cases, and the uncertainty around the 'commensurate reduction' wording and whether this is realistic (i.e. properly within Wellington Water's control) for all attributes).</p> <p>Provide for dry weather discharges (such as dry weather overflows and exfiltration) to be managed</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					<p>via a 'responsive management approach' rather than with reference to the TAS (due to the current inability to forecast dry weather overflows or assess the correlation between dry weather discharges within the control of Wellington Water and TAS being achieved).</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>
S151 Wellington Water Ltd	S151.002	General comments - stormwater management	Amend	<p>Supports a restricted discretionary activity status and the preclusion of public notification for stormwater and wastewater discharges from the local authority networks. However, concerned with the current drafting of the rules which may undermine the Restricted Discretionary status and create uncertainty due to a pre-requisite or 'condition' requiring the activity be accompanied by a strategy prepared 'in accordance with' (as relevant) Schedules 31 or 32. Considers this framing and the subjective wording could invite debate as to whether the relevant strategy is 'in accordance' with them and whether Restricted Discretionary status applies. Also considers this approach is too uncertain for the activity status, and duplicates the substantive assessment of the applications</p> <p>Notes there are further rules in the NRP that should not apply to discharges (e.g. R93 and R120) from the local authority networks and that operative rules such as those relating to sites of significance and wetlands, and the National Environmental Standard for Freshwater, would continue to apply to any stormwater or wastewater discharge from the network.</p>	<p>Amend rules for stormwater and wastewater discharges from the local authority networks (and/or the associated Schedules) so that they refer to objective information requirements rather than inviting a detailed assessment against the schedules to determine activity status; and All amendments necessary (including disapplying rules in other parts of the NRP) to ensure that the wastewater and stormwater from local authority networks remain a restricted discretionary activity, and the associated rules in PC1 function as a 'one stop shop' in the relevant whaitua.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Considers these other less specific rules would undermine the restricted discretionary activity status proposed in PC1 for network discharges.</p> <p>Considers this cannot have been intended, noting the effects on sites of significance being included within the matters of discretion under the new restricted discretionary rules suggests this.</p>	
S151 Wellington Water Ltd	S151.008	General comments - stormwater management	Amend	<p>Supports the recognition of the role of modelling in PC1 as an analytical tool, including to assess the performance of the wastewater and stormwater networks and compliance with associated consent requirements.</p> <p>Considers PC1 will require Wellington Water to undertake significantly more modelling than it already does which in some cases will be onerous with no additional benefit in predicting load reductions or E. coli reductions. Notes Schedule 32 appears to require the full wastewater network to be modelled as part of preparing the WNCIS but considers this will not improve the understanding of overflows beyond that provided by the current 'Strategic Model'.</p> <p>Concerned requiring SMS be guided by modelling and monitoring will place an unreasonably high burden on consent holders. Considers that any receiving environment modelling should be undertaken by Greater Wellington, including state of the environment modelling which is required to ascertain the baseline state for identified attributes.</p>	<p>PC1 be amended to remove unnecessary modelling requirements which are currently to be undertaken by the consent holder; Greater Wellington be responsible for all state of the environment modelling; and Reference to modelling 'concentrations' are removed.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Notes PC1 repeatedly refers to modelling of load as well as concentration of contaminants (WH.P19 and P.P18)but concentration cannot be easily or accurately modelled, and would not provide valuable insight. Considers the focus should be on modelling and managing contaminant load, not concentrations.</p> <p>Notes Wellington Water can undertake modelling for contaminant loads and is looking into models such as the 'Contaminant Load Model' (CLM) and 'Medusa' for that purpose, but ascertaining the load reductions necessary to achieve (or contribute to achieving) the TAS will also require the use of receiving environment models such as the 'Fresh Water Management Tool' (FWMT), which is a project that should be undertaken by Greater Wellington.</p> <p>Notes Wellington Water is also not able to model E. coli or enterococci concentrations or load, and instead must use the wet weather discharge frequency as a proxy for this.</p>	
S151 Wellington Water Ltd	S151.009	General comments - stormwater management	Amend	<p>Supports a partnership between Greater Wellington and consent holders for monitoring stormwater and wastewater discharge effects but considers more definition is required about was each party is responsible for.</p> <p>Submitter is implementing a monitoring plan under their Stage 1 Global Stormwater consent to develop a baseline of information on effects of discharges from the network on receiving environments. The monitoring plan will then be revised to provide an integrated</p>	<p>Amend PC1 to:</p> <ul style="list-style-type: none"> -Clearly indicate what monitoring consent holders are responsible for; and -Clarify that Greater Wellington is responsible for all state of the environment monitoring. <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>receiving environment approach for the network discharges. It is expected that any broader state of the environment monitoring will be undertaken by GWRC and this is the most appropriate approach to monitoring which should be reflected in PC1.</p> <p>Concerned that the PC1 provisions may envisage or require more monitoring to inform the wastewater and stormwater modelling than is actually necessary (or may be necessary in future).</p>	
S151 Wellington Water Ltd	S151.013	General comments - stormwater management	Amend	<p>Considers provisions in PC1 to manage contaminants discharged to groundwater are inconsistent and unclear and place too much focus on stormwater. For example:</p> <ul style="list-style-type: none"> -Policy WH.P7 discharges to groundwater is a holistic policy, however it is not carried through to all relevant activities. -Rule R48 Stormwater from individual property - does not mention any effects on groundwater. -Rule WH.R3 Stormwater from individual property - does not mention any effects on groundwater. -Rule WH.R4 Stormwater from existing high risk premise - limits the effects on groundwater to potable water or stock water. -Rule R51 Stormwater to land permitted - limits the effects on groundwater to potable water or stock water. -Rule WH.R2 Stormwater to land - limits the effects on groundwater to potable water or stock water. -s5.1.13 general conditions - there is no mention of discharge to groundwater. -Policy P73 Farm plans - no mention of minimising contamination of groundwater even though farming is a known major 	<p>Seeks greater clarity of the approach to managing groundwater, including increased focus on recognised and accepted effects from activities, rather than just activities.</p> <p>Alternatively, discharges of contaminants from the stormwater and wastewater network (other than from a Wastewater Treatment Plant (WWTP)) should be managed by capping, minimising and reducing loads so they do not increase over time and where TAS are exceeded, the reduction is to the extent reasonably practicable.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>contributor in many areas of Aotearoa New Zealand.</p> <p>-Rule R54 Stormwater from ports - does not include discharge to groundwater.</p> <p>-Schedule 31 - Local authorities need to address effects on groundwater as part of the SMS. Policy WH.P21 and P22 refer to "capping, minimising and reducing", not increasing over time and where TAS are exceeded reductions are "to the extent reasonably practicable". This is very different to the expectations for stormwater and wastewater from local authority networks</p>	
S151 Wellington Water Ltd	S151.179	General comments - stormwater management	Amend	<p>Considers rules R93 and R120 should be added to the list of provision that will no longer apply to Whaitua Te Whanganui-a-Tara or Te Awarua-o-Porirua Whaitua, as if they continued to apply, it would undermine the more permissive activity status proposed in PC1.</p>	<p>Insert 'Rule R93: All other discharges to sites of significance' and 'Rule R120: Activities in outstanding natural wetlands' to the list of provisions that will no longer apply to Whaitua Te Whanganui-a-Tara or Te Awarua-o-Porirua Whaitua.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>
S177 Transpower New Zealand Limited	S177.007	General comments - stormwater management	Not Stated	<p>Concerns PC1 promotes mandatory financial contributions as a method of offsetting residual adverse effects of contaminants from impervious surface runoff that are considered to be impractical to treat on site, but treatment methods incorporated into the stormwater discharge rules.</p> <p>Considers approach taken by PC1 requiring financial contributions to offset all residual adverse effects regardless of scale is inconsistent with the NPS-FM, which only requires residual adverse effects that are more than minor be offset (or compensated). Considers applicants should be given reasonable opportunity to avoid, minimise or remedy adverse effects associated with contaminants in stormwater runoff and only circumstances</p>	<p>Remove the mandatory requirement for financial contributions as a condition of rules, but the financial contributions regime proposed by PC1 continues to be provided for through PC1's policies, as an optional method alongside other offsetting or compensation methods provided for by the NPS-FM.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>where residual adverse effects are more than minor should offsetting or compensated. Considers circumstances where offsetting or compensation is required, applicants should not be bound to financial contributions, and should have an option to propose offsetting or compensation in line with Appendix 6 and Appendix 7 of the NPS-FM. Considers financial contributions method could be an effective method of offsetting and should remain open as an option, but will only be effective if used to deliver appropriate offsetting projects.</p> <p>For consistency between financial contributions provisions proposed by PC1 and NPS-FM, submission seeks the mandatory requirement for financial contributions as a condition of the rules is removed, but the financial contributions regime proposed by PC1 continues to be provided for through PC1's policies, as an optional method alongside other offsetting or compensation methods provided for by the NPS-FM.</p>	
S183 Yvonne Weeber	S183.002	General comments - stormwater management	Support	Supports stronger environmental regulation of discharges into surface and coastal water bodies	Not stated
S188 Wellington Fish and Game Regional Council	S188.008	General comments - stormwater management	Support	Considers it vital to manage stormwater, wastewater network catchment, and wastewater treatment plant discharges. Considers management and action plans should be SMART: Specific, Measurable, Ambitious but reasonable, Relevant, and Time-bound.	Not stated
S188 Wellington Fish and Game	S188.012	General comments - stormwater management	Not Stated	Considers policies governing adverse effects of stormwater discharges (e.g., policies P.P10, and WH. P10) contain multiple clauses giving reasons to not put good management practices into effect.	Requirement for demonstrating functional need, and the effects management hierarchy should be included to bring the Plan into alignment with current national directives.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Regional Council				Considers in accordance with national legislation, financial and economic reasons are not given precedence over restoration of degraded freshwater ecosystems.	
S188 Wellington Fish and Game Regional Council	S188.013	General comments - stormwater management	Not Stated	Considers when plan change addresses adverse environmental impacts of stormwater or wastewater discharges, it is also important to weight ecosystem health as dictated by the RMA 1991, NPS-FM 2020, and Te Mana o te Wai. Therefore, wherever adverse environmental effects are to be "avoided where practicable", then the NPS-FM 2020 Section 3.21 to 3.24 requires a demonstration of a functional need for that activity, and if there is a functional need, then the effects management hierarchy must be applied.	Not stated
S206 Winstone Aggregates	S206.008	General comments - stormwater management	Amend	Seeks the insertion of a specific policy relating to stormwater discharges from a quarry, to ensure clear direction that the rule aligns with.	Insert new Policy WH.P12A as follows (or wording to similar effect): Policy WH.P12A: Stormwater discharges from quarrying activities Provide for the discharge of stormwater, including where it is associated with new or redevelopment of impervious surfaces from a quarry, where: (a)The quarry is a significant mineral resource; and (b)The quarry is implementing good management practice including reducing contaminant volumes and concentrations as far as practicable, and applying measures, including containment, treatment, management procedures, and monitoring; and (c)The discharge does not result in an inability to meet any target attribute state in Table 8.4.
S206 Winstone Aggregates	S206.009	General comments - stormwater management	Oppose	Notes quarrying activities are considered "high risk industrial or trade premise" under the current rule framework, therefore subject to Rules WH.R4, WH.R11 and WH.R12. Opposes this	Insert new Rule WH.R4A as follows (or wording to similar effect): Rule WH.R4A: Stormwater from quarrying activities - permitted activity The discharge of stormwater from a quarrying

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>framework due to consenting implications and limited consenting paths. Considers reasonable activities would require consent under the drafted provisions, despite their scale or whether they have associated discharges. Notes operational stormwater discharges from Winstone's Belmont site would require consent as a non-complying activity. Notes there is no consideration for quarrying activities in the s32 evaluation and it is therefore unclear if the framework is intended to be applied as such. Considers the current approach is inconsistent with the RPS, which recognises the benefits of mineral resources and seeks to enable its ongoing use. The submitter notes amendments they seek for the RPS, which are relied on for PC1. Seeks the insertion of two rules relating to quarrying activities associated with significant mineral resources, being a permitted activity rule applying to all stormwater discharges; and a restricted discretionary activity rule where the permitted activity rule is not met, subject to stormwater discharges meeting the relevant target attribute states. Notes a similar approach in Rules WH.R8, WH.R9 and WH.R10 for airports and roading.</p>	<p>activity into water, or onto or into land where it may enter a surface water body or coastal water, including where it is associated with the use of land for the creation of new, or redevelopment of existing impervious surfaces, is a permitted activity, provided the following conditions are met:</p> <p>(a) The quarrying activity is of significant mineral resource; and</p> <p>(b) the discharge is not from, onto or into SLUR Category III land, unless the stormwater does not come into contact with SLUR Category III land, and</p> <p>(c) the discharge does not contain wastewater, and</p> <p>(d) if the discharge is to land where it may enter groundwater,</p> <p>(i) the discharge cannot cause or exacerbate the flooding of any other property, and</p> <p>(ii) the discharge is not located within 20m of a bore used for water abstraction for potable supply or stock water, and</p> <p>(e) if the discharge is into a surface water body or into coastal water the concentration of total suspended solids in the discharge shall not exceed:</p> <p>(i) 50g/m3 where the discharge enters a site or habitat identified in Schedule A (outstanding water bodies), Schedule C (mana whenua), Schedule F1 (rivers/lakes), Schedule F3 (identified natural wetlands), Schedule F4 (coastal sites), or Schedule H1 (contact recreation), or</p> <p>(ii) 100g/m3 where the discharge enters any other water,</p> <p>(f) the discharge shall also not cause any erosion of the channel or banks of the receiving water body or the coastal marine area, and</p> <p>(g) the discharge shall also not give rise to the following effects beyond the zone of reasonable mixing:</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S206 Winstone Aggregates	S206.020	General comments - stormwater management	Not-States Amend	Considers financial contribution provisions inconsistent with the NPS-FM, and limits the ability to implement the effects management hierarchy. Notes that aquatic offsetting or compensation is required by the NPS-FM where there are more than minor residual adverse effects, rather than residual adverse effects generally. Considers a contribution mechanism to address minor/residual effects unlikely to be effective or efficient, and concerned that financial contributions are the only form of offset that may be provided. Considers it contrary to the NPS-FM to not allow consideration for the principles set out in Appendix 6 of the NPS-FM. Notes the provisions limit the management of residual adverse effects to aquatic offsetting only, whereas the effects management hierarchy provides for aquatic compensation where aquatic offsetting is not able to be provided.	Other forms of aquatic offsetting are provided for and aquatic compensation is enabled where aquatic offsetting can not be achieved. Retain financial contribution offsetting as optional.
S206 Winstone Aggregates	S206.021	General comments - stormwater management	Not-States Amend	Acknowledges that rules may apply to stormwater discharges to a surface water body from a stormwater network, however considers it is ultra vires to manage effects before this point, citing case law which holds that the regulation of discharges into water under s15 of the RMA does not apply to discharges into the pipes that form a reticulated system.	Make amendments such that rules only relate to discharges from a stormwater network, rather than into a stormwater network.
S207 Firth Industries Limited	S207.003	General comments - stormwater management	Amend	Concerns some Firths operations are defined as "high risk industrial or trade premises". Recognise potential effects with hazardous substances must be managed, but seek amendments to "high risk industrial or trade premises" provisions to ensure they are clear, reasonable,	Requests a permitted/controlled activity pathway for new/redeveloped impervious surfaces at high risk industrial or trade premises, subject to appropriate conditions.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				practicable, and focussed on potential effects.	
S212 Heather Phillips	S212.008	General comments - stormwater management	Not Stated	Concern surrounding zinc contamination from water blasting of Transpower towers near waterways.	Not stated
S225 Upper Hutt City Council	S225.020	General comments - stormwater management	Amend	Not stated	Delete or significantly amend the addition of financial contributions, without clear justification and an understanding of how these funds and projects being delivered monitored for effectiveness to address these issues
S226 Higgins Contractor s Limited	S226.001	General comments - stormwater management	Not Stated	<p>Submission seeks clarity on matters relating to policy and rule frameworks for stormwater discharges to land/water, stormwater from impervious surfaces, and stormwater from high risk industrial or trade premises. Considers proposed policies/rules predominantly relate to discharges from larger sites or activities, such as municipal, state highway, or large urban area discharges, and does not provide alternate pathways for discharges from other sites, including smaller or industrial sites.</p> <p>Considers restriction of discharges entering the local authority network, to be a double-up of existing consenting requirements for local authorities under Schedule N of the NRP.</p> <p>Considers there should be a permitted activity pathway for discharge from any site, including industrial sites, to enter the local authority network provided discharge quality criteria are met.</p> <p>Consider impervious surface rules too restrictive with the 1,000m² limit, and provide onerous requirements of stormwater management plans and impact assessments for smaller</p>	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				impervious areas, and for any impervious surface on 'high risk industrial' or 'trade premise' sites.	
S236 Parkvale Road Limited	S236.003	General comments - stormwater management	Oppose	Supports need to address stormwater but does not agree with the prohibited activity status and subsequent plan change process. Consider section 32 evaluation has not given consideration to appropriate activity status for management of this activity, nor associated costs.	Not stated
S240 Porirua City Council	S240.007	General comments - stormwater management	Not Stated	Unclear how the new plans and strategies which are required relate to each other, and how they relate to existing programmes such as Council's strategies and Wellington Water's current programme to develop stormwater management strategies.	Not stated
S241 Pukerua Property Group Ltd	S241.005	General comments - stormwater management	Oppose	Concerns PC1 introduces increased uncertainty and cost to the provision of housing in Wellington region, directly affecting housing affordability. Considers requirement for financial contributions and risks cost introduced through additional consenting will have flow on effects to the cost of housing in the region and is inconsistent with Objective 2 and associated policies of NPS-UD.	Withdraw PC1. If PC1 not withdrawn, submitter seeks relief from combination of increased risk and cost through removal of financial contributions associated with new stormwater discharge provisions outlined in submission. Should relief not occur, submitter seeks new requirements for stormwater management and financial contributions be removed from new stormwater discharge provisions or amended to provide a more balanced approach to catchment management.
S246 Water New Zealand	S246.004	General comments - stormwater management	Not Stated	Considers new developments are increasingly being required to include stormwater capture and retention but these systems can become a public health risk if not managed properly, including ponding and flooding. Notes some councils have developed performance criteria and identified acceptable solutions, such as Wellington Water's Water Sensitive Design for	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Stormwater: Treatment Device Guideline (2019) and Auckland Council's guideline document Stormwater Management Devices in the Auckland region, GD2017/001.	
S246 Water New Zealand	S246.005	General comments - stormwater management	Support	<p>Commends the proactive approach on addressing zinc and copper from human activities for ecological health for the region. Notes Water NZ have recommended to MBIE that the building consent system should put in place methods to manage water quality, including controls on cladding and/or roofing materials (including guttering and spouting). Such conditions could include; Building materials are sealed or otherwise finished to prevent water runoff which contains copper or zinc.</p> <p>Buildings shall avoid the use of unpainted roofing or spouting materials containing zinc or copper to minimise contaminant runoff.</p> <p>Any development will need to treat these surfaces or the stormwater from these surfaces to avoid copper or zinc from entering stormwater.</p> <p>Stormwater from copper or zinc surfaces is to be collected and treated. Notes that district and regional plans now require avoiding the use of inert materials such as unpainted roofing or spouting materials containing copper or zinc to minimise contaminant runoff.</p>	Recommends GWRC include similar provisions for zinc and copper in the changes to the NRP to those in other district and regional plans.
S246 Water New Zealand	S246.011	General comments - stormwater management	Oppose	Generally supports the new policy and rule framework for stormwater. Is concerned about the resource intensive, multi-layer requirements, conflict and complete duplication of requirements under the Water Services Entities Act 2022. Notes PC1 requires a Stormwater Management Strategy, Stormwater	Amend PC1 requirements for stormwater and wastewater strategies into an integrated Catchment Planning approach, which is informed by and appends asset management plans and stormwater and wastewater network plans. The regulatory reporting requirements under PC1, must support, be consistent with, and not duplicate, the approach taken in the Water Services Entities

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Management Plans and Stormwater Impact Assessments to be produced for networks and catchments and consider this to be replication of effort. Notes there are many other key plans to be prepared under the Water Services Entities Act 2022 including, but not limited to, asset management plans, infrastructure strategies, Te Mana o Te Wai statements and statement of intent. These are all relevant to, and would add value and efficiency to, PC1 requirements. Notes opportunities to consolidate or rationalise regulatory planning, monitoring and reporting, and that these requirements can apply across legislative regimes. Notes PC1 policy, rules and consents must also reflect the economic regulator's information disclosure and price-quality standards monitoring of water services provision.</p>	<p>Act 2022 and by other industry regulators (e.g. Taumata Arowai and the Commission). PC1 is assessed for consistency and integration, including reviewing all terms, definitions and policy outcomes in the Water Services Entity Act 2022.</p>
S248 Ara Poutama Aotearoa the Department of Corrections	S248.005	General comments - stormwater management	Amend	<p>Considers the mandatory requirement to take financial contributions provided for by PC1 are not consistent with the effects management hierarchy set out under the NPS-FM. PC1 promotes mandatory financial contributions as a method of offsetting residual adverse effects of contaminants from impervious surface runoff. Approach taken by PC1 is to require financial contributions to offset all residual adverse effects regardless of scale. Submitter considers this is inconsistent with the effects management hierarchy in the NPS-FM, which requires only residual adverse effects that are more than minor be offset (or compensated). Considers applicants should be given reasonable opportunity to avoid, minimise, or remedy adverse</p>	<p>Seeks the mandatory requirement for financial contributions as a condition of the rules is removed, but that the financial contributions regime proposed by PC1 continues to be provided for through PC1's policies, as an optional method alongside other offsetting or compensation methods provided for by NPS-FM.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>effects associated with contaminants in stormwater runoff, to the extent that residual adverse effects are minor or less than minor. Considers only in circumstances where residual adverse effects are more than minor should offsetting (or compensation) be required. Further, in circumstances where offsetting or compensation is required, applicants should not be bound to financial contributions, and should have an option to propose offsetting or compensation in line with Appendix 6 and Appendix 7 of the NPS-FM.</p> <p>Submitter recognises the financial contributions method proposed by PC1 could be an effective method of offsetting and should remain open as an option in circumstances where offsetting is required. Notes however, financial contributions will only be effective where they are used to deliver appropriate offsetting projects. Considers projects must be planned for and delivered through the Council's Long-term Plan and Infrastructure Strategy for this to occur.</p>	
S249 Isabella Cawthorn	S249.005	General comments - stormwater management	Not Stated	Requests standards be developed for the minimum performance of stormwater retention devices and other green infrastructure.	Develop standards for the minimum performance of stormwater retention devices and other green infrastructure
S249 Isabella Cawthorn	S249.006	General comments - stormwater management	Not Stated	<p>Requests standard be developed, and elements required for building consents, to reduce/prevent copper and zinc getting into stormwater.</p> <p>Considers MBIE should be promoting this kind of source control.</p>	Develop standard to reduce/prevent copper and zinc getting into stormwater.
S255 Woodridge	S255.005	General comments -	Oppose	Considers the long-term operational, maintenance and ownership requirements of the stormwater treatment system	Withdraw PC1 and review and amend all provisions in light of this issue.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Holdings Ltd		stormwater management		needed to be considered and determined before PC1 was notified, due to legal effect upon being released. Concerns about uncertainty whether the relevant TA will accept discharges into their existing systems or if they will approve extensions to those systems to accommodate additional development. Considers technical and legal issues would arise if TA's require all new sections of stormwater main to be held in private ownership and maintained by the upstream property owners.	
S255 Woodridge Holdings Ltd	S255.006	General comments - stormwater management	Oppose	Concerned that TA's will not allow discharges to their network if there is risk that the discharge could make them breach the PC1 requirements in relation to their network.	Withdraw PC1 and review all provisions in light of this issue and amend so that TA's are required to accept a discharge which meets the specified standards a permitted activity or has an appropriate GW resource consent.
S261 Forest & Bird	S261.009	General comments - stormwater management	Not Stated	Considers financial contributions are more akin to environmental compensation than offsetting. Considers the proposed approach is to be done at an aggregated level, instead of by the consent holder at the project level. Notes the policies in PC1 only require minimisation prior to compensation, rather than NPSFM requirement for avoidance, then minimisation, then offsetting before considering compensation, and is therefore inconsistent with the NPSFM. Notes Schedule 30 suggests that s108 only allows financial contribution for the purpose of offsetting, however considers financial contributions can be for any purposes specified in the plan. Considers references to offset and compensation must be consistent with the framework in the NPSM. Notes NCZPS will prevail in the coastal environment.	References to offset and compensation must be consistent with the framework in the NPSM.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S17 John Easter	S17.020	General comments - target attribute states	Not Stated	Concerned about timeframes to achieve target outcomes in the Makara Catchment. Generic figures in plan change should be replaced with guidance notes.	Not stated.
S22 Lynn Cadenhead	S22.006	General comments - target attribute states	Amend	Supports the proposed target attribute states. Seeks a fall-back date of 2035 should no other date be specified by 31 December 2026.	Include a fall-back date of 2035 should no other date be specified by 31 December 2026.
S35 Amos Mann	S35.003	General comments - target attribute states	Not Stated	Supports the Target Attribute States for the catchments but suggests they should be even better.	Not stated
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.009	General comments - target attribute states	Oppose	Concerned the TAS erroneous and have been propagated throughout PC1 as justification of the need for more control over plantation forestry, noting that pastoral farming is not subject to controlled activity.	Not stated
S40 Pamela Govan	S40.003	General comments - target attribute states	Not Stated	Supports the Target Attribute States proposed.	Not stated.
S107 Friends of Waipāhihi Karori Stream	S107.003	General comments - target attribute states	Support	Particularly supports the following: - proposed timeframes for achieving the target attribute states. - proposed measures to reduce wet weather overflows and dry weather discharges from the wastewater system. Ideally prefers these are removed completely, however acknowledges the complexity of doing so.	Not stated
S107 Friends of Waipāhihi Karori Stream	S107.005	General comments - target attribute states	Not Stated	Notes that Wellington City Council will submit that the timeframes for achieving the target attribute state be extended to 2060 but this is not supported by the submitter.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S107 Friends of Waipāhihi Karori Stream	S107.007	General comments - target attribute states	Support	Opposes any extension of the proposed timeframe for achieving the target attribute states. Considers that the proposed timeframes would be strengthened by interim and measurable milestones (e.g. by 2030 and 2035), which would be essential should the timeframe be extended.	Not stated
S151 Wellington Water Ltd	S151.003	General comments - target attribute states	Oppose	<p>Opposes the provisions relating to TAS and Coastal Water Objectives (CWO) in full. Considers there is a general lack of information relating to the baseline state to measure against, meaning it is not possible to determine whether the TAS parameters and requirements are reasonable, appropriate and achievable. Considers the CWO in Table 8.1 are generally appropriate parameters for coastal environmental health, but concerned the lack of information relating to baseline states and timeframes to meet requirements makes it difficult to determine whether improvement is measurable. Considers it is unclear how the TAS and CWO provisions will be assessed and measured.</p> <p>Considers the provisions do not currently recognise the complexities and contributing factors for achieving TAS and that meeting TAS for network discharges cannot wholly sit with Wellington Water as there are many factors within catchments that contribute to water quality, and the provisions do not reflect the magnitude of work involved in delivering water quality improvement.</p> <p>Considers the uncertainty and lack of information in the provisions regarding the baseline state means that Wellington Water cannot undertake a full assessment of the potential impact that the TAS/CWO</p>	<p>The plan change include guidance or provisions that outline how proportional contribution to meeting the TAS can be demonstrated, and more realistic timeframes in the relevant TAS tables.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>provisions will have on their discharge consent applications and the prioritisation and implementation of sub-catchment improvements.</p> <p>Considers it is likely that the TAS 2040 timeframe (particularly as it relates to E. coli), will result in the requirement for a large proportion of sub-catchments (or possibly all of them) to be upgraded in the short term. As such, undertaking a prioritisation exercise and implementing the sub-catchment management plans for stormwater and wastewater could be rendered meaningless. This is unlikely to allow for progressive improvement, or for practicable implementation.</p> <p>Seeks further discussions with Greater Wellington on this matter, particularly around a more detailed assessment of the implications of the TAS and CWO provisions on a sub-catchment basis and a clear understanding of how these would be addressed in a resource consent application.</p>	
S151 Wellington Water Ltd	S151.004	General comments - target attribute states	Oppose	<p>Considers the scale and volume of work necessary between now and 2040 to achieve the necessary reduction in wet weather wastewater overflows, dry weather wastewater discharges and stormwater contamination is significant. Retrofitting the urban areas of four cities to also address environmental outcomes will take decades of planning, designing and construction. Acknowledges this work needs to be done but 17 years (between now and 2040) is insufficient to achieve this.</p> <p>Considers that delivery of the network discharges programme at such a fast pace will impact on delivery of other important work programmes for Te Mana</p>	<p>Amend all timeframes associated with TAS from 2040 to 2060.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				o te Wai such as storage lakes for drinking water supply to support increased minimum flows, wastewater treatment plant upgrades and the renewals programmes for both wastewater and water supply.	
S151 Wellington Water Ltd	S151.007	General comments - target attribute states	Oppose	<p>Acknowledges the need for improvements or reductions that are commensurate with or proportionate to the effects of the relevant discharge on the attribute state of the receiving environment.</p> <p>Concerned that as worded these requirements are ambiguous, because it is not clear whether they mean a reduction in contaminant load that reflects the effect of the discharge on the receiving environment (which would require modelling/technical assessment), or a percentage reduction in all cases that reflects the percentage difference between the TAS and the baseline state of the receiving environment. Notes the second interpretation may be unduly onerous where it does not reflect the actual contribution of the relevant discharge, while the first interpretation would require Wellington Water to acquire information or assessment tools that are not currently available.</p> <p>Notes that Wellington Water does not currently have access to the data or analytical tools required to assess the correlation between contaminant load out of a pipe and contaminant concentrations in the receiving environment, but is able to model the contaminant load (e.g. total kilograms of copper and zinc from the stormwater network). Notes concentrations in the receiving</p>	<p>Seeks that:</p> <ul style="list-style-type: none"> -All requirements to determine 'commensurate' reductions at the application stage are removed, and that different wording is used to acknowledge that in some cases 'at source' reductions are not within the applicant's control (for example, the reduction of copper in stormwater, as acknowledged in the section 32 report) -The requirements to make reductions in order to contribute to meeting the TAS in relation to wastewater are confined to wet weather overflows (and then only the 95th percentile), with dry weather overflows and exfiltration subject to a separate responsive management regime; Amend PC1 is amended to either include load reduction targets for Te Whanganui-a-Tara and for other parameters, or to provide clear directions as to how Wellington Water (and other applicants) can demonstrate their contribution to achieving TAS; Amend the methods and/or Schedule 27 (Freshwater Action Plan requirements) are amended to confirm that the modelling and monitoring to facilitate the identification of load reduction targets in SMPs and SIPs will be undertaken by Greater Wellington; and/or -In the alternative, should the "commensurate" wording be retained in PC1, that this term is defined and/or guidance provided in the policies to ensure it reflects reductions that are both proportionate to the effects of the discharges on the TAS in question, as well as the extent to which reductions are reasonably within the control of the applicant. A definition is proposed in Section B of this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>environment is dependent on factors such as stream flows and ocean currents (which affect dilution and therefore concentration).</p> <p>Subject to the targets being realistic, supports PC1 including clear targets for load reductions in the discharge, rather than unclear formulas such as "commensurate".</p> <p>Considers what is realistically achievable through stormwater network discharge mitigations is not reflected by the proposed references (in other parts of PC1) to reductions "commensurate to achieving" the TAS, which would suggest that Wellington Water needs to reduce copper by much more than 15%, for the TAS to be achieved.</p> <p>Seeks to understand what actions were considered to be realistically achievable through stormwater network discharge mitigations, which is not clear from Greer 2023, but is obviously a critical determinant for setting of the TAS. States that determining targets for load reductions both the extent to which the discharge load contributes to achieving (or not achieving) the TAS the extent to which this is realistically within Wellington Water's control need to be considered. Notes the analysis has not yet been undertaken for stormwater catchments beyond Porirua, or for E. coli or enterococci in relation to wastewater. Unless or until that work has been carried out and Wellington Water considers the outcomes reasonable, submitter does not support the "commensurate reductions"</p>	<p>A new method needs to be included in PC1 for Greater Wellington to provide the necessary analytical tools to determine the correlation between contaminant load out of a pipe and contaminant concentrations in the receiving environment if PC1 is reliant on this assessment.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>wording in PC1.</p> <p>Considers it is not realistic to require confirmation of load reduction targets as part of the application documentation. At most, this could be determined at the sub-catchment planning stage, with the high level strategies required under Schedules 31 and 32 instead specifying the intended methodology or approach for determining this.</p> <p>Considers these assessments will require state of the environment information and/or modelling that is not available to Wellington Water. Expectation is that Greater Wellington will be producing the modelling necessary for Wellington Water to determine the appropriate (or 'commensurate') load reduction targets.</p> <p>Considers it is not realistic to require confirmation of load reduction targets as part of the application documentation. At most, this could be determined at the sub-catchment planning stage, with the high level strategies required under Schedules 31 and 32 instead specifying the intended methodology or approach for determining this.</p> <p>Considers these assessments will require state of the environment information and/or modelling that is not available to Wellington Water and expects Greater Wellington will be producing the modelling necessary for Wellington Water to determine the appropriate (or 'commensurate') load reduction targets.</p> <p>Considers there are additional</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>complexities in ascertaining the contribution of dry weather overflows and exfiltration to achieving the TAS as discharges can be from a private cross connection that are not a matter within Wellington Water's control and Wellington Water does not model cross connections because they are an aberration. Seeks that rather than a requirement to reduce dry weather overflows and exfiltration to contribute to meeting the TAS they be subject to a separate 'responsive management' programme.</p>	
<p>S176 Te Awarua o Porirua Harbour and Catchments Community Trust & Guardians of Pāuatahanui Inlet</p>	S176.002	General comments - target attribute states	Support	<p>Notes long-term target attribute timeframes require interim target attribute state timeframes set for intervals of not more than 10 years with baselines which need to be achieved by the interim target date set. Acknowledges outcomes sought from actions to improve ecosystem health will be a long-term prospect. But notes timeframes should not be arbitrarily set several decades in the future and must include interim and measurable milestones (such as five yearly intervals) in achieving the ultimate goal by 2040. Considers there must be a regular critique of the actions being implemented to ensure they are effective.</p> <p>Notes expectation to meet the target attribute states of water quality by 2040 and any delay will mean the community will have to (and continued risk of having to) continue living with an increasingly degraded environment and increased rehabilitation costs as a result. Notes need to establish meaningful and robust environmental limits through the inclusion of the limits recommended by the Whaitua Committee in 2019 .</p>	<p>Timeframes must contain interim and measurable milestones (including five yearly reporting).</p> <p>Retention of dates recommended by Whaitua Committee rather than pushing out the dates of achieving an improved attribute state by decades.</p> <p>Ensure the environmental limits are set to achieve "ecological health" and other associated values such as recreation, amenity, and custodianship.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Supports the long-term goal of improvement to target attribute state. Notes Target Attribute States need to be set to allow maintenance and/or restoration of this level of ecosystem health, which in cases will likely involve setting limits and bottom lines well above the national bottom lines. Considers all waterbodies, not just rivers and streams, should have set Target Attribute States, this includes estuaries, wetlands, and groundwater.</p> <p>Considers a functional NRP requires objectives, policies, methods, rules, timelines and dates that are robust and scientifically based to succeed in restoring health to degraded waterbodies. Notes the NRP needs to provide clear guidance as to how these will be incorporated into existing and future resource consents and this is also applicable to developing resource consent conditions that allow for unambiguous enforcement options while undertaking compliance function of the Regional Council.</p>	
S188 Wellington Fish and Game Regional Council	S188.002	General comments - target attribute states	Support	Seeks Target Attribute States be set to allow for maintenance and/or restoration of this level of ecosystem health, which may involve setting limits and bottom lines well above the national bottom lines.	Not stated
S188 Wellington Fish and Game Regional Council	S188.011	General comments - target attribute states	Not Stated	Long-term target attribute timeframes require interim target attribute state timeframes also. Short-term milestones are useful for maintaining momentum over the lifetime of a vision, and minimising the likelihood of delays.	Interim target attribute state timeframes set for intervals of not more than 10 years with baselines which need to be achieved by the interim target date set.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S189 SAMUEL KAHUI	S189.005	General comments - target attribute states	Support	Supports the timeframes for achieving the target attribute states set out in PC1, noting that in many cases these are only first step improvements to reverse the decline and get water quality above national bottom lines.	Not stated
S193 Wairarapa Federated Farmers	S193.007	General comments - target attribute states	Not Stated	<p>Supports progressive improvement towards the health and well-being of waterbodies in Te Awarua-o-Porirua Whaitua and Whaitua Te Whanganui-a-Tara (the whaitua).</p> <p>Generally agrees with the overarching objectives in chapters 8 (WH.O1) and 9 (P.01) but seeks a provision for a thriving primary production sector.</p> <p>Considers Objectives WH.02 and P.02 clearly outline a trajectory of measurable improvement towards the health and well-being of waterbodies and their margins in the whaitua so by 2040 listed processes or states have improved or have been reached. Considers these objectives recognise the system change needed to meet the overarching objectives of WH.01 and P.01 will take time, knowledge, and significant financial investment to achieve.</p> <p>Supports an interim timeframe of 2040 to 'check in' and see whether water quality is improving.</p> <p>Does not consider all TASs will be achievable by 2040 partly because there is a lack of quality data to establish baseline positions for all TASs. Suggests more work needs to be done to gather and collate this data so it can be used to inform the freshwater action plans (FAPs) that will set out the pathway to achieving</p>	<p>Seeks the reference to 2040 be removed from Tables 8.4 and 9.2.</p> <p>Seeks TASs and/or sites where there is limited or 'insufficient data' be removed from Tables 8.4 and 9.2.</p> <p>Make any consequential amendment(s) necessary to give effect to the relief sought.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>the TASs.</p> <p>Considers 2040 is an unrealistic timeframe to meet all the proposed TASs set out in Tables 8.4 and 9.2 of PC1. Considers the notes in Tables 8.4 and 9.2 indicate the Council has insufficient data on baseline states for some attributes and further monitoring and modelling is required to develop attribute state frameworks.</p> <p>Considers further work is required by the Council, with mana whenua and communities, to develop and implement FAPs to address how TASs will be achieved. Notes it will take time to establish a robust body of evidence for the TAS baselines, and the plans on how to achieve TASs where they need to be improved.</p> <p>Considers the TASs met should be maintained. Where they need to be improved, the tables should reflect realistic dates by which the TASs can be achieved</p> <p>Considers milestone target dates do not have to be the same for all TASs and all part FMUs. Suggests prioritising part-FMUs where the Council can achieve 'easy-wins' or where human health is most likely to be impacted by poor water quality. Considers realistic timeframes can be determined when preparing FAPs and carried into the NRP through a variation.</p> <p>Seeks relief that TASs and/or sites where there is limited or 'insufficient data' should be removed from Tables 8.4 and 9.2 as</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				the baseline state cannot be reliably determined, and therefore it is not known whether the attribute and/or site needs to be maintained or improved.	
S195 New Zealand Farm Forestry Association (NZFFA)	S195.026	General comments - target attribute states	Oppose	<p>Considers Tables 8.4, 8.5 and 9.2 are at odds with the NPS-FW. Questions why the tables use a mix of states and numeric measurements; why parts have no information; or why there is no acknowledgement that further measurements are required to define a TAS.</p> <p>Acknowledges many of the numeric attributes used have not actually been measured, but are the result of modelling.</p>	Withdraw Tables 8.4, 8.5 and 9.2, undertake review of them and do not reinstate them until reviewed by an independent party.
S197 Greg Davies	S197.006	General comments - target attribute states	Support	Supports water quality targets.	Requests as much work as possible is done through environmental limits to achieve these targets.
S211 Hutt City Council	S211.002	General comments - target attribute states	Amend	Considers that setting an E. coli target timeframe of 2060 will be less costly to HCC ratepayers than the proposed 2040 timeframe.	Not stated
S211 Hutt City Council	S211.003	General comments - target attribute states	Amend	Considers repair and upgrading the public network would only reduce a proportion of the contaminant load and there will be substantial costs to landowners to upgrade pipes (private laterals) within the private wastewater network that make a significant portion of untreated discharges to land and water, to meet the proposed 2040 target. Notes Wellington Water's concern in relation to the ability to deliver the work required to meet the 2040 target.	Amend the proposed 2040 E.coli target timeframe to 2060.
S221 Generation Zero	S221.004	General comments - target attribute states	Amend	Endorses the TAS objective of Option 1 (achieving goals by 2040) because it will incentivise greater innovation. Suggest interim targets to make the timeframe less divisive.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S235 Shonaugh Wright	S235.006	General comments - target attribute states	Support	Supports targets in the water quality target tables	Requests as much work as possible is done through environmental limits to achieve these targets.
S237 John Turkington Limited	S237.007	General comments - target attribute states	Not Stated	<p>Considers any rule, policy or objective of PC1 intended to give effect to a specified TAS must demonstrate it is necessary. Suggests scientific data supports that current forest landuse, controls, and management practices, as regulated under the NES-CF, are sufficient to achieve the desired target attribute state for freshwater clarity</p> <p>Notes the Section 32 report and scientific evidence (Freshwater quality monitoring technical report) that commercial forestry as a land use, is beneficial for water quality; and that planting commercial forests (afforestation and replanting) should be encouraged, and not restricted or prohibited, by the NRP.</p> <p>Question if any of the amended policies, objectives and rules relating to commercial forestry land use are necessary to achieve target attribute states in other FMU or part-FMU.</p> <p>Opposes any proposed or amended rules in PC1 for commercial forestry, on the basis they are not necessary for achieving the target attribute state for visual clarity and total suspended sediment, and current National Standards are appropriate for managing forestry activities and their effects.</p>	Not stated
S240 Porirua City Council	S240.003	General comments - target attribute states	Oppose	Opposes the 2040 E.coli target of PC1 and concerned this will affect the consenting of stormwater and wastewater discharge consents. Considers that some catchments will require a 90% reduction which is impossible in the short timeframe. Concerned the rates increase of 12-14%	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				per year for network upgrades to meet the 2040 target, on top of BAU rates, is not tenable. Considers that whilst the 2060 target of 6-7% is more achievable provided other funding avenues are explored, including growth charging and debt funding. Also notes significant central government funding will be required. Considers the numbers do not take into account debt affordability and availability with Local Government Funding Agency Covenants.	
S244 Andrew Esler	S244.006	General comments - target attribute states	Support	Supports targets in the water quality target tables	Requests as much work as possible is done through environmental limits to achieve these targets.
S249 Isabella Cawthorn	S249.003	General comments - target attribute states	Support	Strongly supports the Target Attribute States proposed for all catchments except for Te Awarua o Porirua in which the submitter would like strengthened.	Strengthen target attribute states for Te Awarua o Porirua
S253 John Western	S253.006	General comments - target attribute states	Not Stated	Supports targets in the water quality target tables.	Requests as much work as possible is done through environmental limits to achieve these targets.
S261 Forest & Bird	S261.002	General comments - target attribute states	Not Stated	Considers Target Attribute State targets too high in some part FMUs and seeks they are lowered. Notes the numeric target for the Taupo part FMU appears to be above the modelled baseline and considers this impermissible as targets must be at or below the baseline. Considers Target Attribute States should be introduced for "habitat" and "natural form and character" which activities must seek to achieve, and which should be included as targets for Habitat Quality Index / Natural Character Index scores, and/or physical properties to achieve for the river, and that this would be consistent with Policy 30. Considers activities should then be required to undertake activities	Include Target Attribute States for 'habitat' and 'natural form and character' and include as targets for Habitat Quality Index / Natural Character Index scores, and/or physical properties to achieve for the river.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				which maintains habitat quality in accordance with the target attribute states.	
S261 Forest & Bird	S261.003	General comments - target attribute states	Not Stated	Notes the NPSM require target states to be set at intervals of no longer than 10 years, and therefore interim target states need to be set out in the plan, or a shorter timeframe is set of no later than 2033. Considers targets must reflect the state that achieves the long-term vision.	Provide interim timeframes for target attribute states
S278 Alex Pfeffer	S278.002	General comments - target attribute states	Not Stated	<p>Considers restrictive regulations should be applied only when attributes have exceeded acceptable levels and these have been attributed to farming.</p> <p>Considers showing the Mangaroa River as representative of rural streams in Table 8.4 is disingenuous as the river lies in farmland with a high density of lifestyle blocks.</p> <p>Concern that Inorganic Nitrogen regulations are too pre-emptive and inequitable in application.</p> <p>Considers requiring pastoral farms of 4 to 20 Ha with winter stocking units than 12/Ha to undertake nitrogen risk assessments annually should not be imposed unless IN levels are shown to be approaching unacceptable levels over time, but even then additional information is needed.</p> <p>Suggests farms should not be trapped at levels of nitrogen discharge risk arbitrarily at the time of registration. Considers a more equitable method would be to set a maximum allowable nitrogen risk level and alter this up or down as necessary based on acceptable catchment IN levels being</p>	Not Stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Any other relief (including consequential relief) to give effect to the decisions sought in submission;</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				onerous and costly, and could jeopardise the economic viability of development and supply of affordable housing.	
S173 ARAKURA PLAINS DEVELOP MENT LIMITED	S173.004	General comments - unplanned greenfield development	Oppose	Opposes new provisions relating to unplanned development, and that they deny a consenting pathway for proposals that may have positive outcomes for the community or for freshwater. Notes the s32 evaluation suggest that contaminants can be addressed through a combination of treatment and financial contributions, therefore considers prohibited activity status inappropriate. Considers the need for two plan changes to enable greenfield development poses challenges for the private sector's responsiveness to housing needs, and is onerous and costly. Considers the approach may jeopardise the economic viability of development and hinder the supply of affordable housing.	Not stated
S177 Transpower New Zealand Limited	S177.003	General comments - unplanned greenfield development	Not Stated	Considers the definition of unplanned greenfield development is too broad and uncertain. Unclear if all development is prohibited or just specific kinds of urban development. Concerns the approach could prohibit works on regionally significant infrastructure (including the National Grid) in areas identified as "unplanned greenfield development areas". Concerned that the policies and rules of "unplanned greenfield development areas" may capture works on the national grid which would be contrary to Policy 14 and the objective of the NPSET. Questions the efficiency and practicability of the proposed approach which creates jurisdictional overlap between territorial authorities, the regional council, and the Minister of Conservation)on the management of development in	Define the term "greenfield development", and that this term must exclude the operation, maintenance, upgrading, or development of regionally significant infrastructure'.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				"unplanned greenfield development areas". Concerns with Councils stance that an overlap will be addressed through "concurrent plan change processes" but any process would be ad-hoc and without any overarching legislation to give structure and certainty to submitters, applicants, and the local authorities. Concerned about the concurrent process anticipated to manage "unplanned greenfield development" areas, noting decisions on separate plan changes must be made separately. Notes Territorial authorities and the regional council have a duty to avoid unreasonable delay, which may result in concurrent plan changes becoming unsynchronised. Consider ad-hoc process is likely to be inefficient and frustrating, and risks inconsistent decision making. Considers the appropriate means of providing for a combined regulatory approach is through a combined planning document to address the issue, as per section 80 of the RMA.	
S181 John Boyle	S181.004	General comments - unplanned greenfield development	Oppose	Opposes 'unplanned greenfield development' being a prohibited activity and believes each site should be considered individually on its merits.	Amend PC1 to allow to allow applications for new 'unplanned greenfield development'. Exclude areas covered by PC50 from 'unplanned greenfield development'
S182 Susan Boyle	S182.004	General comments - unplanned greenfield development	Not Stated	Strongly opposes new 'unplanned greenfield development' being prohibited. Considers decentralisation wastewater infrastructure will reduce the potential environmental impact from new developments. Considers GWRC should assess each development on its merits and the impact it has on the environment and any mitigations proposed.	Amend PC1 to allow application for a new 'unplanned greenfield development'. Areas covered by PC50r are not deemed to be 'unplanned greenfield development'.
S183 Yvonne Weeber	S183.004	General comments - unplanned	Support	Supports the need for less greenfield developments.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		greenfield development		Concerned that intensifying existing areas such as the Rongotai Isthmus may lead to increased flooding and stormwater discharge into Wellington Harbour and Lyaill Bay.	
S194 Urban Edge Planning Group on behalf of Mangaroa Farms Ltd	S194.001	General comments - unplanned greenfield development	Neutral	Notes a Rural Lifestyle Zone is understood to be a non-urban zone, and therefore, it is concluded the framework relating to unplanned greenfield development would not be applicable to Mangaroa Farms intended future activities. However, if the framework relating to unplanned greenfield development were to impact upon these plans, it would be of significant concern to the submitter.	Seeks the following: -Ensure the provisions relating to unplanned greenfield development do not relate to development occurring in the rural environment, including the Rural Lifestyle Zone. -Amend activity status of WH.R22 from prohibited to non-complying. -Any consequential changes or alternative relief required to achieve the intended outcomes sought within this submission.
S206 Winstone Aggregates	S206.001	General comments - unplanned greenfield development	Amend	Notes that there is no definition for "greenfield development". Based on the s32 evaluation, considers "greenfield development" to be principally focused on urban development. Concerned the lack of a definition means that all activities may be considered "greenfield development". Seeks the provision of a definition which excludes activities that are not greenfield development, including quarrying activities.	Insert new definition of "greenfield development" as follows: Greenfield development Means any urban development undertaken within a site or sites that has not previously been used for urban land use. Greenfield development does not include: Quarrying activities. Request that "quarrying activities" be noted as a defined term.
S207 Firth Industries Limited	S207.004	General comments - unplanned greenfield development	Amend	Inappropriate for all development in "unplanned greenfield development areas" to be prohibited activities due to insufficient evidence to substantiate that 'all' development will have significant adverse effects. Although existing Firth sites are located within planned greenfield developed areas, concerns that future operations may be not be limited to existing sites. Considers that measures set out in the remaining stormwater discharge and impervious surface rules (as amended by the relief sought by Firth)	Seek greater clarity on the scope of provisions for unplanned greenfield development, by incorporating a 'greenfield development' definition and a discretionary activity consenting pathway for development in "unplanned greenfield development areas".

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				are incorporated into new development, development can occur when effects are suitably managed.	
S210 Guildford Timber Company Limited, Silverstream Forest Limited and the Goodwin Estate Trust.	S210.001	General comments - unplanned greenfield development	Amend Oppose	<p>Submitter has concerns as to zoning of their land and considers the zoning as 'unplanned greenfield areas' is contrary to previous the previous stance taken by GWRC and UHCC. The submitter notes they have invested time and money on expert assessments to date to support the rezoning of their land which have demonstrated the suitability of its land for residential and mixed use activities, and the economic and social benefits to the wider community, including affordable housing, recreational opportunities, and ecological enhancement of important areas.</p> <p>Submitter opposes their land being identified 'unplanned greenfield areas' on Planning Map 88 and being subject to the 'unplanned urban development' provisions of PC1, which include prohibited activity rules associated with stormwater discharges. Considers it is appropriate based on the planning history of the land for it to be included in the 'planned/existing urban area' notation on Planning Map 88.</p>	Seeks GWRC reclassify submitters land in Pinehaven/Silverstream (as shown on Map 1 in Appendix A with legal descriptions provided in Appendix B - refer to original submission) from 'unplanned greenfield areas' to 'Planned/existing urban area'.
S210 Guildford Timber Company Limited, Silverstream Forest Limited and the Goodwin Estate Trust.	S210.002	General comments - unplanned greenfield development	Oppose	<p>Opposes and seeks removal from PC1 all provisions that provide for unplanned greenfield development. The submitter considers the approach to prohibiting unplanned greenfield development (Policy WH.P2); avoiding all new stormwater discharges from unplanned greenfield development (Policy WH.P.16); and the subsequent prohibiting of stormwater from new unplanned greenfield development (Rule WH.R13) is overly restrictive, unwarranted and a misuse of the</p>	Seeks definition of 'unplanned greenfield development' and all reference to 'unplanned greenfield development' and 'unplanned greenfield areas' be deleted from PC1 provisions, and for GWRC to rely on the PC1, existing NRP, and district plan provisions to address the effects of future greenfield development outside of existing urban areas.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>prohibited activity category. In particular the submitters are concerned that:</p> <p>Areas shown on Maps 86 - 89 are extensive in area and will affect an unidentified number of resource users unlikely to have been properly consulted (although it is noted feedback from consultation as part of the s.32 evaluation was unsupportive of the prohibited activity status of greenfield development within unplanned greenfield development areas - Para. 53; page 13 s.32 evaluation report); The costs and benefits/effectiveness and efficiency evaluation of adopting this prohibitive approach included in the s.32 evaluation report is general in nature and fails to identify and assess the extent the NPS-UD will be implemented (including being contrary to the intent of Objectives 2 and 6 and Policy 8), the costs and delays to resource users caused by the requirement to undertake a dual plan change process (there is no provision in the RMA for a dual private plan change process), and the ability of councils to respond to the housing needs of the region;</p> <p>Prohibiting unplanned greenfield development and requiring the resource user to go through two plan changes to change both the district and regional plans is a misuse of the prohibited activity category which is intended to be used with care and where the effects are easily identifiable and discrete - in this case the effects of the prohibited activity are not specified for any particular area, and the extent of the area does not warrant a blanket approach;</p> <p>Furthermore, there is no evaluation of</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>reasons why another activity status (such as discretionary or non-complying) could be used for unplanned greenfield developments</p> <p>This approach would allow adverse effects of a particular proposal in a particular area to be considered, and the proposal declined if the effects did not meet the objectives and policies on the NRP;</p> <p>Adopting a plan change process to change the activity should not be used as an alternative to the resource consenting process, but this appears to be the approach taken in PC1;</p> <p>There are restrictions on when private plan change requests can be made and Council has discretion as to whether they reject those requests or not, including not meeting priorities and whether the matter had been considered within the last 2 years. (clause 25, schedule 1 RMA).</p> <p>There is no certainty that a private plan change process is available.</p> <p>The objectives of PC1 do not justify the avoidance and prohibited approach adopted in the policies and rules;</p> <p>The definition of 'unplanned greenfield development' includes a note that states unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time PC1 was notified on 30th October 2023 - this limitation does not recognise that there are submissions to the draft FDS and PC50 of the UHCC district plan (that is still going through a plan change process that could result in rezoning of submitters land) seeking areas to be rezoned residential beyond the 30th October date specified, or capture the UHCC IPI implementation of</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>the MDRS.</p> <p>Furthermore, there is an inconsistent application of the definition of 'unplanned urban development' by local authorities (i.e. large lot residential and hill residential lots have been included in Wellington and Hutt City Council areas, but rural residential has been excluded from UHCC and Porirua City Council which has similar types of urban development outcomes.</p>	
<p>S210 Guildford Timber Company Limited, Silverstream Forest Limited and the Goodwin Estate Trust.</p>	S210.005	General comments - unplanned greenfield development	Not Stated	<p>Notes the regional and district plans are required to give effect to the NPS-UD.</p> <p>Notes submitters land was identified as a growth area in the Wellington Regional Future Growth Framework (2021) but the draft FDS1 (PPC1 to the Natural Resources Plan) has not included site as a Future Growth Area.</p> <p>Notes submitters land has been identified as a future urban growth area since 2007 in the Upper Hutt District Plan but plan change 50 to the Upper Hutt District Plan did not include provisions to allow the development of the submitters land as a future growth area.</p> <p>Notes in the HCC Land Use Strategy 2016 - 2043 (LUS) the submitter's land is identified as a growth area.</p> <p>Notes the submitters land is identified in the UHCC Long Term Plan 2021 - 2031 (LTP) (adopted 2022) as a growth area and is recognised and accounted for in the planning for public infrastructure upgrades for growth planning purposes. In particular, Silverstream bridge replacement, and Pinehaven reservoir upgrades for water supply both required to facilitate increased population growth in the area.</p>	Not Stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S214 Megan Persico	S214.001	General comments - unplanned greenfield development	Oppose	<p>Concerned the prohibition of greenfield developments fails to consider individual merits.</p> <p>Considers the emergence of decentralisation wastewater infrastructure will likely accelerate, reducing the potential environment impact from new subdivisions.</p> <p>Considers GWRC should consider greenfield developments individually on merits and impacts on the environment.</p>	Review and amend to reflect the outcome of UHCC PC50 that was notified prior to PC1.
S242 Anya Pollock	S242.003	General comments - unplanned greenfield development	Support	<p>Considers doing less on greenfield land and more on brownfield land is good, and necessary to meet the objectives.</p> <p>Considers it important that water sensitive urban design becomes the norm, and ongoing maintenance of infrastructure is funded.</p>	Not Stated
S248 Ara Poutama Aotearoa the Department of Corrections	S248.002	General comments - unplanned greenfield development	Oppose	<p>Considers approach taken by PC1 to "unplanned greenfield development" is potentially inappropriate due to the definition of "unplanned greenfield development" being broad and uncertain, particularly as it is unclear whether all development is prohibited by the approach, or only specific kinds of urban development. Notes approach could prohibit works associated with maintenance, upgrading and development of Rimutaka and Arohata prisons in areas identified as "unplanned greenfield development areas", where such works are considered "greenfield development".</p> <p>Notes PC1 does not define what "greenfield development" is.</p> <p>Submitter also raises concerns about practicality and efficiency of this approach noting it creates significant jurisdictional overlap between territorial authorities, the regional council, and the Minister of Conservation (because the provisions are</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>coastal provisions) on the management of development in "unplanned greenfield development areas".</p> <p>Notes this raises procedural concerns about concurrent process that must be used to manage development in "unplanned greenfield development" areas. Decisions on separate plan changes must be made separately by the territorial authority and regional council, and in this case, any change to the unplanned greenfield development area maps must also be approved by the Minister of Conservation. Notes territorial authorities and the regional council have a duty to avoid unreasonable delay which, when applied to separate plan change process, may result in concurrent plan changes becoming unsynchronised. Such an ad-hoc process is likely to be highly inefficient for those seeking changes to regional and district plans and frustrating for those submitting on them, and the risk of inconsistent decision making in relation to the same resource management issue is high. Considers if it is Council's position this issue requires a combined regulatory approach with territorial authorities, then the appropriate means of providing for this is through a combined planning document to address the issue (and the Council is obliged to consider this under section 80(7) of the RMA). Notes this is what the RMA anticipates in this circumstance, but it is not what PC1 provides for.</p>	
S251 Peka Peka Farm Limited	S251.001	General comments - unplanned greenfield development	Oppose	Opposes the approach for providing unplanned greenfield development as a prohibited activity and considers it contrary to NPS-UD. In particular, Objective 2, Objective 6 (c), Policy 1 (d)	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>and Policy 8 and 8 (a).</p> <p>Considers unplanned greenfield development as a prohibited activity is fundamentally at odds with the requirement of NPS-UD to be responsive to unanticipated or out of sequence development and to support the competitive operation of land and development markets. Considers it will add significant costs which have not been appropriately assessed in Section 32 report. Considers insufficient assessment of prohibited activity status has been had compared to use of non-complying or discretionary activity status. Opposes targeted approach intended to preclude 'unplanned' greenfield development.</p>	
S260 Cannon Point Development Limited (Ltd.)	S260.002	General comments - unplanned greenfield development	Oppose	<p>Opposes the identification of unplanned greenfield areas in PC1 maps and the unplanned greenfield development definition. Considers this development activity should be controlled by the relevant zone rules in the District Plan.</p> <p>Concerned the inclusion of the Rural Lifestyle zone as Unplanned Greenfield Area under PC1 is inconsistent with the inclusion of other similar zones as planned development across other local authorities, in particular Large Lot Residential in Wellington City Council and Hill Residential in Hut City Council. Considers residential development in this zone is considered to be planned development and should be defined as such in PC1. Considers the approach is fundamentally flawed from a resource management perspective, and contrary to the Upper Hut District Plan.</p>	<p>Not stated. Delete the definition of Unplanned greenfield development and delete Maps 86-89 Greenfield Areas (planned and unplanned). Or alternatively amend Map 88 to include the site extent of Cannon Point, as shown on the map included in Appendix A, and further described in paragraph 1.12, of submission as a Planned/ existing urban area, and make consequential amendments to subsequent PC1 provisions, to reflect the above.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Considers defining unplanned greenfield areas as those that do not have an urban or future urban zone as of 30th October 2023 is inflexible and unreasonable because the date does not allow for notified plan changes which are already processing that propose to re-zone land for residential use beyond that date. Notes in the recommendations to the Joint Committee Subcommittee for the draft Wairarapa-Wellington-Horowhenua Future Development Strategy (FDS), GW support the submitters site as a growth area. Considers the definition and approach to what is unplanned urban development is flawed and needs to be reconsidered consistently across each district council.</p>

				developments achieving reductions greater than 85%. Considers the proposed contributions are not effects-based.	
S206 Winstone Aggregates	S206.002	General comments - urban development	Amend	Seeks the provision of a definition for "urban development", noting that the operative RPS definition can be used.	Insert new definition of "urban development" as follows: Urban development Urban development is subdivision, use and development that is characterised by its planned reliance on reticulated services (such as water supply and drainage) by its generation of traffic, and would include activities (such as manufacturing), which are usually provided for in urban areas. It also typically has lots sizes of less than 3000 square metres.
S211 Hutt City Council	S211.004	General comments - urban development	Amend	Considers the prohibited activity status for unplanned urban growth is most restrictive activity and prevents the possibility of applying for resource consent. Notes Lower Hutt has sufficient housing capacity within existing urban areas for the next 30 years but there is a regional shortfall for industrial land. Notes the NPS-UD requires Council to review the Housing and Business Assessment (HBA) every three years to ensure that it provides sufficient housing and business development capacity based on the results of the HBA.	Not stated
S211 Hutt City Council	S211.005	General comments - urban development	Not Stated	Considers that the proposed prohibited activity status for unplanned greenfield development is inconsistent with Policy 8 of the NPS-UD, could prevent HCC from meeting its ongoing requirements under the NPS-UD, and precludes consenting pathways for development in unplanned greenfield areas which would otherwise be appropriate and/or have positive outcomes.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S219 Cuttriss Consultant s Ltd	S219.003	General comments - urban development	Oppose	Considers PC1 potentially conflicts with the intended outcomes of the NPS-UD to provide for well-functioning urban environments, including both through infill, and greenfield developments. Notes Policy 6 requires planning decisions that affect urban environments to consider the benefits of urban development and the contributions that development makes to provide or realise development capacity, and this has not been sufficiently considered in PC1 as economic impacts have not been assessed.	Withdraw PC1
S221 Generation Zero	S221.008	General comments - urban development	Amend	Supports infill housing and brownfield redevelopment preference. Supports upzoning both for environmentally friendly housing shortage needs but also the cost efficiency of improving stormwater in existing urban areas vs in greenfield areas. Considers the need for redevelopment of existing urban areas to accommodate urban intensification without stormwater degradation of surrounding waterways. Supports Policy Package Option 1 and 3 but not 2.	Not stated
S225 Upper Hutt City Council	S225.014	General comments - urban development	Oppose	Not stated	Delete provisions prohibiting urban expansion beyond existing urban zoned land, particularly where this does not align with recent rezoning notified before this plan change;
S225 Upper Hutt City Council	S225.026	General comments - urban development	Not Stated	Considers PC1 circumvents or undermines national directives. Concerned provisions will make urban development required by NPS-UD potentially impossible to deliver, through wrapping constraints around housing intensification direction.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Notes that despite the joint plan change pathway identified for 'unplanned greenfield developments', the prohibition laden objective and policy framework (both in NRP and RPS) would render future plan change an impossibility due to not implementing the higher order documents, and any section 32 analysis would be at risk of identifying development as being contrary to objectives and policies in these plans.	
S236 Parkvale Road Limited	S236.001	General comments - urban development	Oppose	Concerned effects of Plan Change 1 (PC1) is to prohibit residential rezoning of 200 Parkvale Road, and considers requirement of a further plan change to Natural Resources Plan (NRP) for future development is a disproportionate response to the scale of rezoning being sought from the Wellington City Council, and ultimate development yield that might be realised from this site.	Not stated
S240 Porirua City Council	S240.006	General comments - urban development	Not Stated	Supports in principle Greater Wellington regulating Water Sensitive Urban Design (WSUD) and other stormwater controls to improve freshwater outcomes. Considers the provisions are light on detail on how WSUD will be implemented. It is unclear what specifications will apply to WSUD , how development will be monitored where no resource consent is required, and how these assets will be maintained and by who. Questions if there will be an MOU or transfer of functions for territorial authorities to play a role. Considers for WSUD to really deliver, a coordinated regional implementation programme is needed.	Not stated
S243 Land Matters Limited	S243.035	General comments -	Oppose	Considers PC1 has significant consequences for affordability of housing and land development in Wellington	Withdrawal of PC1 to allow for a comprehensive review of provisions of plan change as they relate to national guidance.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		urban development		Region. Notes addition of a significant financial contribution for new residential units will have flow on housing affordability effects in the region and is inconsistent with Objective 2 and associated policies of NPS-UD. Concerns this has not been considered in the Section 32 report and completely ignores the affordability implications of the proposed changes.	
S243 Land Matters Limited	S243.036	General comments - urban development	Oppose	<p>Concerns PC1 introduces increased uncertainty and cost to the provision of housing in Wellington region, directly affecting housing affordability.</p> <p>Considers requirement for financial contributions and risk cost introduced through additional consenting will have flow on effects to the cost of housing in the region and is inconsistent with Objective 2 and associated policies of NPS-UD.</p>	Remove the new requirements for stormwater management and financial contributions from all new stormwater discharge provisions or amended to provide a more balanced approach to catchment management.
S247 Carrus Corporation Ltd	S247.003	General comments - urban development	Oppose	Considers PC1 potentially conflicts with the intended outcomes of the NPS-UD to provide for well-functioning urban environments, including both through infill, and greenfield developments. Notes Policy 6 requires planning decisions that affect urban environments to consider the benefits of urban development and the contributions that development makes to provide or realise development capacity, and this has not been sufficiently considered in PC1 as economic impacts have not been assessed.	Withdraw PC1

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S249 Isabella Cawthorn	S249.011	General comments - urban development	Support	<p>Considers effects of stronger rules on urban development and infrastructure is excellent.</p> <p>Considers rules that improve the ways land and water is used must be used.</p>	Not stated
S249 Isabella Cawthorn	S249.013	General comments - urban development	Support	Considers density done well enables sophisticated water management.	Not stated
S251 Peka Peka Farm Limited	S251.002	General comments - urban development	Oppose	Opposes financial contribution proposed by PC1. Considers an approach will impact housing affordability, is one-size fits all, does not account for site specific approaches and ignores opportunities to comprehensively treat stormwater (eg. Extensive wetlands).	Not stated
S252 Thames Pacific	S252.003	General comments - urban development	Oppose	Considers PC1 potentially conflicts with the intended outcomes of the NPS-UD to provide for well-functioning urban environments, including both through infill, and greenfield developments. Notes Policy 6 requires planning decisions that affect urban environments to consider the benefits of urban development and the contributions that development makes to provide or realise development capacity, and this has not been sufficiently considered in PC1 as economic impacts have not been assessed.	Withdraw PC1
S254 Best Farm Ltd	S254.003	General comments - urban development	Oppose	Considers there is a disjoint between the outcomes being sought by the Territorial Authorities who are giving effect to the NPS-UD and are actively promoting new growth through both intensification of the existing urban area and green field areas.	Not stated
S255 Woodridge Holdings Ltd	S255.007	General comments - urban development	Oppose	Notes that PC1 does not include a Water Sensitive Urban Design Guide and so Council is asking developers via PC1 to implement measures into developments	Withdraw PC1, review it and release it again when the Water Sensitive Urban Design Guide has also been prepared, in consultation with the relevant stakeholders.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				which it has not considered and provided guidance on. Considers this document should be prepared at the same time or before PC1 as typical water sensitive urban design measures are not going to work in large parts of the region due to the topography and the nature of the underlying material. Considers the approach makes it difficult for applicants to know what is likely to be acceptable under the rules and will result in a huge waste of time and resources for all parties involved.	
S151 Wellington Water Ltd	S151.184	General comments - wastewater	Amend	Concerned the PC1 policies and rules are not sufficiently enabling, and in some instances are not feasible to implement.	<p>Amend policies and rules to: Clearly provide for stormwater and wastewater discharges from local authority networks as a restricted discretionary activity, without this status being jeopardised by subjective assessments of the merits of the SMS or WNCIS, or non-complying activity rules in other parts of the NRP.</p> <p>Provide guidance on the matters to be considered in prioritising sub-catchments for improvement works, while also ensuring sufficient flexibility to take account of practical matters such as investment availability and efficiencies and alignment with other workstreams (including wastewater improvement works).</p> <p>Allow matters of detail to be specified in sub-catchment SMPs and SIPs, rather than in the initial SMS and WNCIS.</p> <p>Provide flexibility for determining the load reductions required in order to appropriately contribute to meeting the TAS (in light of our present concerns with the TAS, lack of information as to baseline states in many cases, and the uncertainty around the 'commensurate reduction' wording and whether this is realistic (i.e. properly within Wellington Water's control) for all attributes).</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					<p>Provide for dry weather discharges (such as dry weather overflows and exfiltration) to be managed via a 'responsive management approach' rather than with reference to the TAS (due to the current inability to forecast dry weather overflows or assess the correlation between dry weather discharges within the control of Wellington Water and TAS being achieved).</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>
S151 Wellington Water Ltd	S151.185	General comments - wastewater	Amend	<p>Supports a restricted discretionary activity status and the preclusion of public notification for stormwater and wastewater discharges from the local authority networks. However, concerned with the current drafting of the rules which may undermine the Restricted Discretionary status and create uncertainty due to a pre-requisite or 'condition' requiring the activity be accompanied by a strategy prepared 'in accordance with' (as relevant) Schedules 31 or 32. Considers this framing and the subjective wording could invite debate as to whether the relevant strategy is 'in accordance' with them and whether Restricted Discretionary status applies. Also considers this approach is too uncertain for the activity status, and duplicates the substantive assessment of the applications</p> <p>Notes there are further rules in the NRP that should not apply to discharges (e.g. R93 and R120) from the local authority networks and that operative rules such as those relating to sites of significance and wetlands, and the National Environmental Standard for Freshwater, would continue</p>	<p>Amend rules for stormwater and wastewater discharges from the local authority networks (and/or the associated Schedules) so that they refer to objective information requirements rather than inviting a detailed assessment against the schedules to determine activity status; and</p> <p>All amendments necessary (including disapplying rules in other parts of the NRP) to ensure that the wastewater and stormwater from local authority networks remain a restricted discretionary activity, and the associated rules in PC1 function as a 'one stop shop' in the relevant whaitua.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>to apply to any stormwater or wastewater discharge from the network.</p> <p>Considers these other less specific rules would undermine the restricted discretionary activity status proposed in PC1 for network discharges.</p> <p>Considers this cannot have been intended, noting the effects on sites of significance being included within the matters of discretion under the new restricted discretionary rules suggests this.</p>	
S151 Wellington Water Ltd	S151.186	General comments - wastewater	Amend	<p>Supports the recognition of the role of modelling in PC1 as an analytical tool, including to assess the performance of the wastewater and stormwater networks and compliance with associated consent requirements.</p> <p>Considers PC1 will require Wellington Water to undertake significantly more modelling than it already does which in some cases will be onerous with no additional benefit in predicting load reductions or E. coli reductions. Notes Schedule 32 appears to require the full wastewater network to be modelled as part of preparing the WNCIS but considers this will not improve the understanding of overflows beyond that provided by the current 'Strategic Model'.</p> <p>Concerned requiring SMS be guided by modelling and monitoring will place an unreasonably high burden on consent holders. Considers that any receiving environment modelling should be undertaken by Greater Wellington, including state of the environment</p>	<p>PC1 be amended to remove unnecessary modelling requirements which are currently to be undertaken by the consent holder; Greater Wellington be responsible for all state of the environment modelling; and Reference to modelling 'concentrations' are removed. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>modelling which is required to ascertain the baseline state for identified attributes.</p> <p>Notes PC1 repeatedly refers to modelling of load as well as concentration of contaminants (WH.P19 and P.P18)but concentration cannot be easily or accurately modelled, and would not provide valuable insight. Considers the focus should be on modelling and managing contaminant load, not concentrations. Notes Wellington Water can undertake modelling for contaminant loads and is looking into models such as the 'Contaminant Load Model' (CLM) and 'Medusa' for that purpose, but ascertaining the load reductions necessary to achieve (or contribute to achieving) the TAS will also require the use of receiving environment models such as the 'Fresh Water Management Tool' (FWMT), which is a project that should be undertaken by Greater Wellington.</p> <p>Notes Wellington Water is also not able to model E. coli or enterococci concentrations or load, and instead must use the wet weather discharge frequency as a proxy for this.</p>	
S151 Wellington Water Ltd	S151.187	General comments - wastewater	Amend	<p>Supports a partnership between Greater Wellington and consent holders for monitoring stormwater and wastewater discharge effects but considers more definition is required about was each party is responsible for.</p> <p>Submitter is implementing a monitoring plan under their Stage 1 Global Stormwater consent to develop a baseline of information on effects of discharges</p>	<p>Amend PC1 to:</p> <ul style="list-style-type: none"> -Clearly indicate what monitoring consent holders are responsible for; and -Clarify that Greater Wellington is responsible for all state of the environment monitoring. <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>from the network on receiving environments. The monitoring plan will then be revised to provide an integrated receiving environment approach for the network discharges. It is expected that any broader state of the environment monitoring will be undertaken by GWRC and this is the most appropriate approach to monitoring which should be reflected in PC1.</p> <p>Concerned that the PC1 provisions may envisage or require more monitoring to inform the wastewater and stormwater modelling than is actually necessary (or may be necessary in future).</p>	
S151 Wellington Water Ltd	S151.188	General comments - wastewater	Amend	<p>Considers provisions in PC1 to manage contaminants discharged to groundwater are inconsistent and unclear and place too much focus on stormwater. For example:</p> <ul style="list-style-type: none"> -Policy WH.P7 discharges to groundwater is a holistic policy, however it is not carried through to all relevant activities. -Rule R48 Stormwater from individual property - does not mention any effects on groundwater. -Rule WH.R3 Stormwater from individual property - does not mention any effects on groundwater. -Rule WH.R4 Stormwater from existing high risk premise - limits the effects on groundwater to potable water or stock water. -Rule R51 Stormwater to land permitted - limits the effects on groundwater to potable water or stock water. -Rule WH.R2 Stormwater to land - limits the effects on groundwater to potable water or stock water. -s5.1.13 general conditions - there is no mention of discharge to groundwater. 	<p>Seeks greater clarity of the approach to managing groundwater, including increased focus on recognised and accepted effects from activities, rather than just activities.</p> <p>Alternatively, discharges of contaminants from the stormwater and wastewater network (other than from a Wastewater Treatment Plant (WWTP)) should be managed by capping, minimising and reducing loads so they do not increase over time and where TAS are exceeded, the reduction is to the extent reasonably practicable.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>-Policy P73 Farm plans - no mention of minimising contamination of groundwater even though farming is a known major contributor in many areas of Aotearoa New Zealand.</p> <p>-Rule R54 Stormwater from ports - does not include discharge to groundwater.</p> <p>-Schedule 31 - Local authorities need to address effects on groundwater as part of the SMS. Policy WH.P21 and P22 refer to "capping, minimising and reducing", not increasing over time and where TAS are exceeded reductions are "to the extent reasonably practicable". This is very different to the expectations for stormwater and wastewater from local authority networks</p>	
S188 Wellington Fish and Game Regional Council	S188.014	General comments - wastewater	Not Stated	Considers when plan change addresses adverse environmental impacts of stormwater or wastewater discharges, it is also important to weight ecosystem health as dictated by the RMA 1991, NPS-FM 2020, and Te Mana o te Wai. Therefore, wherever adverse environmental effects are to be "avoided where practicable", then the NPS-FM 2020 Section 3.21 to 3.24 requires a demonstration of a functional need for that activity, and if there is a functional need, then the effects management hierarchy must be applied.	Not stated
S221 Generation Zero	S221.005	General comments - wastewater	Amend	Notes there is no quantified analysis of social and cultural benefits from wastewater improvements and no monetary cost assessment of not improving wastewater systems over the next 40 years. Concern that wastewater will need to be resilient to factor changes such as projected population growth, increased extreme rainfall, and sea level rise. Suggests that resilient long-term	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				infrastructure will provide risk reduction as well as social and cultural benefits.	
S246 Water New Zealand	S246.006	General comments - wastewater	Amend	Supports the wastewater rules but is concerned with the lack of provisions for biosolids and minimal recognition of onsite wastewater systems. Notes Water NZ have been working in partnership with other industry stakeholders to update the Safe Application of Biosolids to Land in New Zealand, 2003 and are hoping to have a version published in early 2024.	Make reference and make use of the forthcoming Guidelines for Beneficial Use of Organic Materials on Productive Land, 2024.
S246 Water New Zealand	S246.008	General comments - wastewater	Not Stated	Not stated	PC1 gives greater emphasis to prioritising Te Hurihanga Wai (the water cycle), recognising the value and necessity of circularity, and integrated management planning and delivery. Amend so any wastewater reduction strategy must be part of an integrated catchment planning approach and include building community awareness of the true value of water.
S246 Water New Zealand	S246.015	General comments - wastewater	Not Stated	Considers more regulatory improvements are necessary for onsite wastewater systems as if not adequately managed or regulated can lead to in system failures, or worse, significant public or environmental health risk. Notes current policies and practices applying to the design and maintenance of onsite wastewater management systems vary. Notes considering the relevance of the National Objective Framework, and identifying baseline state and set target attribute states, it would be appropriate for PC1 to consider onsite wastewater systems and their potential risk to drinking water supplies, waterbody health and the wider environment. We request policy and rules for onsite wastewater systems consider all stages of a systems design life - design, construction, inspection, maintenance, and compliance	Amend so policy and rules for onsite wastewater systems consider all stages of a systems design life - design, construction, inspection, maintenance, and compliance inspections. GWRC through Te Ura Kahika, with the Ministry for Building, Innovation and Employment, and the water quality regulator, Taumata Arowai, draft standard consent conditions or verification methods for ongoing maintenance, performance, and compliance of on-site wastewater systems.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>inspections. This might include;</p> <ul style="list-style-type: none"> -Setting minimum design, performance standards and maintenance standards. Such conditions or verification methods could be similar to Verification Method G13/VM4 Foul Water: On-Site Disposal which requires on-site systems to be designed and installed to AS/NZS 1547:2012 On-site Domestic-Wastewater Management. -Establishing GIS based recording portal of all systems, including those currently considered to be permitted activities. ECAN in collaboration ESR undertook GIS mapping and assessment of risks posed by systems. Employing consistent approaches for GIS mapping amongst regional councils will help us develop nationally consistent approaches for managing risks over time. 	
S249 Isabella Cawthorn	S249.007	General comments - wastewater	Not Stated	Considers the disposal of sewage sludge on land, and systems that hold / treat wastewater on site, are important and haven't been provided enough coverage.	Not stated
S249 Isabella Cawthorn	S249.010	General comments - wastewater	Not Stated	<p>Considers the construction, performance monitoring, inspection and pinging (enforcement) of on-site wastewater treatment facilities is crucial given they reduce peak loads on vulnerable infrastructure (especially enabling intensification), and their potential to pollute the wider network if badly built and not maintained.</p> <p>Requests the development of minimum standards for the construction of on-site wastewater treatment facilities, and standardised consent conditions for their operation and monitoring to ensure they continue to operate as intended.</p>	Requests the development of minimum standards for the construction of on-site wastewater treatment facilities, and standardised consent conditions for their operation and monitoring to ensure they continue to operate as intended.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S4 Melanie Ratray	S4.001	General comments - water bodies	Support	Considers limiting herd sizes and protecting rivers is a basic first step.	Retain as notified (inferred)
S22 Lynn Cadenhead	S22.001	General comments - water bodies	Not Stated	The state of water bodies reflects the use of land, water and other resources in their catchments.	Not stated.
S22 Lynn Cadenhead	S22.002	General comments - water bodies	Not Stated	Considers community values of many water bodies have been compromised but these streams and other water bodies continue to provide species' habitats. Considers that collective action through the regional plan is required to secure and improve waterbodies and ensure they remain community assets.	Not stated.
S22 Lynn Cadenhead	S22.003	General comments - water bodies	Support	Supports the direction of PC1 to require specific actions to improve water bodies over time. Recommends that interim and measurable milestones are set for achieving improved freshwater outcomes to ensure that measures are effective.	Include interim and measurable milestones
S22 Lynn Cadenhead	S22.007	General comments - water bodies	Amend	Seeks highest level of protection for waterways containing giant kokopu, shortjaw kokopu or lampreys, due to their vulnerability to environmental changes.	Provide highest level of protection for waterways containing giant kokopu, shortjaw kokopu or lampreys.
S26 Christine Stanley	S26.001	General comments - water bodies	Support	Supports the intent of improving water quality and ecological health objectives within Te Awarua-o-Porirua harbour	Not stated
S29 Neil Deans	S29.002	General comments - water bodies	Support	The state of water bodies reflects the use of land, water and other resources in their catchments.	Not stated.
S29 Neil Deans	S29.003	General comments - water bodies	Support	Considers community values of many water bodies have been compromised but these streams and other water bodies continue to provide species' habitats. Considers collective action through the regional plan is required to secure and improve waterbodies and ensure they remain community assets.	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S29 Neil Deans	S29.004	General comments - water bodies	Amend	Supports the direction of PC1 to require specific actions to improve water bodies over time. Recommends that interim and measurable milestones are set for achieving improved freshwater outcomes to ensure that measures are effective.	Not stated.
S35 Amos Mann	S35.001	General comments - water bodies	Not Stated	Considers protection of water quality is of utmost importance as it is vital for all life.	Not stated
S35 Amos Mann	S35.002	General comments - water bodies	Not Stated	Supports Plan Change 1 water elements.	Not stated
S40 Pamela Govan	S40.001	General comments - water bodies	Not Stated	Supports PC1.	Not stated.
S45 Heather Blissett	S45.004	General comments - water bodies	Not Stated	Suggests the Regional Emergency Plan be considered when thinking about water. Considers the intention to restore the mauri of the river should include being able to drink water from anywhere.	Not stated
S45 Heather Blissett	S45.007	General comments - water bodies	Not Stated	Questions whether there is an intent to restore the mauri of wetlands affected by human action. Supports restoring wetlands to what is known of the ecosystem, the water systems, and the life in and around it rather than using a measure from the date that humans destroyed them (references Pg. 18).	Not stated
S92 Callum Forbes	S92.004	General comments - water bodies	Oppose	Expressed concern that the minimum size for "small rivers" is not defined.	Amend definitions which relate to other regulations
S151 Wellington Water Ltd	S151.006	General comments - water bodies	Support	Generally supportive of the requirement to provide methodologies to prioritise sub-catchment upgrades or improvements as part of consent applications for stormwater network discharges and wastewater network discharges.	Matters to be considered when setting the prioritisation, or sequence, of sub-catchments should be listed (or cross-referred to) within: -Policy WH.P13 (stormwater) -Policy WH.P19 (wastewater) -Policy P.P12 (stormwater)

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Considers it appropriate that prioritisation methodologies, rather than the actual order of sub-catchments, are provided as part of the Wastewater Network Catchment Improvement Strategy (WNCIS) and Stormwater Management Strategy (SMS).</p> <p>Considers that the prioritisation should be done in an integrated manner considering both stormwater and wastewater discharges concurrently and would be done with investors and mana whenua in a collaborative manner. Considers the range of factors that should influence prioritisation is greater than currently indicated within the plan change provisions.</p> <p>Refers to figures that illustrate some of the matters identified within the plan change provisions that require prioritisation in respect of wastewater and stormwater network discharges on a sub-catchment basis, and the impact that the provisions as currently drafted may have in terms of requiring prioritisation. Notes this does not take into account broader matters that Wellington Water considers are necessary to ensure deliverability and implementation of sub-catchment upgrades and improvements.</p> <p>Considers prioritisation should be undertaken in a more integrated manner so wastewater and stormwater discharges are upgraded at the same time for each sub-catchment. Concerned the number of provisions that could influence the prioritisation of sub-catchments for improvements is overly complicated and</p>	<p>-Policy P.P18 (wastewater)</p> <p>Provisions within the plan change that specifically use the terminology 'prioritise' or 'prioritisation', or otherwise speak to the relative urgency of improving or enhancing certain values (other than those mentioned above), are redrafted to make it clear that they do not apply to applications for stormwater and wastewater network discharges</p> <p>Consider the wording of provisions as they relate to varying levels of requirements such as 'avoid' or 'protect' in terms of the level of importance represented by the provisions, and how this could be considered to influence decision making on a prioritisation methodology. Ideally, these provisions would not apply to stormwater and wastewater network discharges either.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>lacks clear direction. Considers prioritisation requirements should be made clearer in the plan change.</p> <p>Considers matters such as efficiency of delivery, investment availability and allocation are considered during the process of prioritisation, to allow alignment with other work programmes and to ensure an integrated approach.</p> <p>Considers the TAS requirements in PC1 would render the process of prioritising sub-catchments for improvement or upgrade meaningless due to the requirements to meet 2040 targets, and the use of terminology such as 'reasonable timeframes' within other provisions of PC1 creates additional uncertainty in relation to the prioritisation exercise.</p> <p>Refers to Schedule C of submission where examples of provisions that may influence prioritisation methodologies have been identified.</p>	
S175 Tracy Simms	S175.003	General comments - water bodies	Not Stated	Considers provisions on fencing waterways are contrary to previous advice provided by GWRC.	Withdraw the Plan Change
S176 Te Awarua o Porirua Harbour and Catchments Community Trust & Guardians of	S176.009	General comments - water bodies	Support	Supports rules and methods that provide for, or encourage, increasing the extent of wetland habitat in the rural landscape and in the river/stream corridors.	Clarify and strengthen rules and methods to support actions to increase wetland habitat.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

of the Bays Inc					
S186 Guardians of the Bays Inc	S186.003	General comments - water bodies	Support	Supports objectives for freshwater and coastal water.	Not stated
S187 Victoria University Canoe Club	S187.001	General comments - water bodies	Not Stated	<p>Submitter values the water quality values of the following areas for contact recreation and ecosystem health:</p> <ul style="list-style-type: none"> i. Te Awakairangi / the Hutt River ii. Akatarawa River iii. Whakatikei River iv. Titahi Bay v. Lyall Bay vi. Otaki River <p>Considers the natural form and character of these waterbodies is an important part of their value. Natural form and character creates rapids and other features of these sections of river that make them valuable for kayaking.</p> <p>Te Awakairangi / the Hutt Gorge is an outstanding run for whitewater kayaking, which traverses what they consider an outstanding landscape with outstanding amenity values. Would like to see the outstanding value of this section of river recognised in the plan.</p> <p>The natural and wildlife values of these areas are also important to the submitter.</p>	Requests the outstanding value of this section [Te Awakairangi / the Hutt Gorge] of river recognised in the plan.
S187 Victoria University Canoe Club	S187.002	General comments - water bodies	Not Stated	<p>Concerned about increased amounts of sediment coming from the Pakuratahi River when flows increase and potential e.coli and pathogen loads in the water.</p> <p>Observes algae in summer months when flows are low resulting in issues with</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>recreation and amenity as well as human health when making contact with water.</p> <p>Concerns river engineering such as railway iron degrades water quality and creates potential hazards for river users when slash and logs get caught on structures</p>	
S187 Victoria University Canoe Club	S187.004	General comments - water bodies	Support	Supports the concept of Te Mana o te Wai and the hierarchy of obligations.	Acknowledge Te Mana o te Wai (and wai ora) throughout PC1 and prioritise ecosystem health and contact recreation.
S187 Victoria University Canoe Club	S187.005	General comments - water bodies	Not Stated	Key concerns are water quality (particularly e. coli, sediment, algal growth/periphyton, and ecosystem health); amenity; contact recreation; and natural form and character.	<p>Seeks the following: Recognition in the plan of the outstanding kayaking/packrafting /rafting values in the Whaitua are recognised in the plan, particularly for the Hutt Gorge (which has outstanding kayaking, amenity, and landscape values).</p> <p>More work by GWRC to monitor and preserve natural character, and to strengthen objectives, policies, and rules which allow the river to function more naturally, particularly in its reaches influenced by flood protection.</p> <p>Targets for natural character that are similar to the sorts of targets set for water quality and seeks objectives and policies that support these.</p> <p>More work to enhance water quality in the coastal environment, for use of 'flat water' environments to learn and train without worrying about compromising health if contact is made with the water.</p> <p>Retain coastal water quality indicators/targets.</p>
S188 Wellington Fish and Game	S188.003	General comments - water bodies	Amend	Considers all waterbodies should have Target Attribute States including estuaries, wetlands and groundwater. Considers wetlands have been excluded	Seeks all waterbodies (including wetlands) have Target Attribute States.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Regional Council				in the NRP PC1 from having Target Attribute States set.	
S188 Wellington Fish and Game Regional Council	S188.007	General comments - water bodies	Support	Considers it vital to address/ minimise the cumulative impacts of water takes and core allocation on waterbodies and aquatic ecosystem health.	Seeks reduced takes where rivers are suffering loss of natural form and character, and ecosystem degradation due to insufficient water flow.
S188 Wellington Fish and Game Regional Council	S188.010	General comments - water bodies	Not Stated	Notes research indicates that ~2% of New Zealand waterways are naturally soft-bottomed, but due to sediment inputs into waterways, currently ~ 20% of New Zealand rivers and streams now have soft sediment beds, rather than natural hard-bottomed, stony beds they historically displayed (Clapcott et al, 2011). Considers restoring silted streams should be a priority and restoration/monitoring should show this restoration over time.	Not stated
S193 Wairarapa Federated Farmers	S193.016	General comments - water bodies	Amend	Considers Council has limited information on what proportion of water abstraction is taken under the current permitted activity rules or is authorised under s14(3)(b) of the RMA. Supports the recommendation of Thompson in the Water quantity and allocation technical report that periodic surveys be conducted to gather more information on these takes as and when required (for example, to coincide with catchment-wide expiry of consented takes). Considers this is a more pragmatic approach than requiring metering for every permitted water take, which would be unduly costly for water users to implement and for the Council to administer.	Not Stated
S193 Wairarapa Federated Farmers	S193.017	General comments - water bodies	Oppose	In the Porirua, Pāuatahanui, and Horokiri catchment management units, the submitter supports expressing the allocation limits and minimum flows as	That the allocation limit for freshwater bodies in Te Awarua-o-Porirua Whaitua be returned to 30% of MALF.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>specific numbers rather than default percentages of mean annual low flow (MALF). Considers this change makes it clearer for water users and Council staff what the limits are.</p> <p>Considers in the Porirua, Pāuatahanui, and Horokiri catchment management units, water takes that meet minimum flow requirements and are within allocation limits should be assessed under a Controlled Activity rule rather than a Restricted Discretionary rule. Considers this will provide more certainty for water users and would be less expensive for the Council to administer.</p> <p>Supports the recommendation of the whitua committee that the 90 + 30 freshwater management framework would protect ecosystem health whilst providing for the needs of the community.</p>	Make any consequential amendment(s) necessary to give effect to the relief sought.
S212 Heather Phillips	S212.003	General comments - water bodies	Not Stated	Concern that PC1 does not cover waterway obstructions which can cause waterways to deviate and cause more sediment. A requirement should be made that when a waterway becomes obstructed by trees or growth it needs to be cleaned before the waterway if forced to deviate.	Not stated
S212 Heather Phillips	S212.004	General comments - water bodies	Not Stated	<p>Considers more extraction of gravels from the Hutt River needed to be undertaken to cope with the previous flood volumes and when the Hutt River breaches the stop banks much more than sediment will enter the Te Whanganui a Tara/Wellington Harbour.</p> <p>Considers planning for extreme events not evident in the plan but would be appropriate.</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S212 Heather Phillips	S212.006	General comments - water bodies	Not Stated	Concern about lack of definition for river bed.	Add definition of river bed
S212 Heather Phillips	S212.007	General comments - water bodies	Not Stated	Concern about lack of mention about the Whakatiki River/Little Wainui River.	Not stated
S216 Te Rūnanga o Toa Rangatira (Te Rūnanga)	S216.001	General comments - water bodies	Not Stated	Restoring the health of Te Awarua o Porirua and Te Whanganui a Tara are key priorities for the submitter	Provisions relating to the protection and restoration of Te Awarua o Porirua and Te Whanganui a Tara should be confirmed, adopted and implemented.
S221 Generation Zero	S221.002	General comments - water bodies	Not Stated	Support recommendations for improving the health and well-being of coastal waterbodies towards Te Mana o te Wai in Waituata Te Whanganui-a-tara. C. Suggests sections such as 4.6 on Biodiversity, where "maintain or where practicable restore" is used, could focus on improvement as well as restoration. Suggests goal for policy should not be maintenance but improvement and should align better with principles of stewardship and Kaitiakitanga inherent to Te Mana o te Wai.	Not stated
S221 Generation Zero	S221.003	General comments - water bodies	Support	Support emphasis on coastal receiving environment and considers this aligns with the set objectives of holistic water health approach and with te ara Wairua o te Wai values.	Not stated
S234 David and Pauline Innes	S234.004	General comments - water bodies	Oppose	The submitter seeks clarity about whether the stream at the rear of their property is listed in the schedule and what wildlife has been identified for this stream. Notes the stream is subject to multiple water control features associated with urban development. Requests that GWRC note that there is no natural passage for fish on the stream.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S234 David and Pauline Innes	S234.005	General comments - water bodies	Oppose	Objects to the description of Wainuiomata-iti Stream (Wainuiomata Stream). Considers the waterway needs to be described by a proper survey of the river. Notes the waterway appears to be affected by bacterial life and eels are the only species that appear to survive.	Not stated
S234 David and Pauline Innes	S234.008	General comments - water bodies	Oppose	Seeks an urgent investigation of the extent of the wetland at the end of the Moores Valley Road. Notes they understand extensive areas of Lot 60 DP 354855 is wetland.	Not stated
S237 John Turkington Limited	S237.006	General comments - water bodies	Not Stated	Supports principles of Te Mana o te Wai. Considers any rule, policy or objective of PC1 intended to give effect to Te Mana o te Wai must demonstrate it is necessary to do so.	Not stated
S249 Isabella Cawthorn	S249.002	General comments - water bodies	Support	Strongly supports the objectives for all the catchments in Te Upoko o te Ika.	Suggests that where the phrase "on a trajectory of measurable improvement" is used, the definition of "measurable" includes something statistically significant or an appropriate magnitude measure.
S249 Isabella Cawthorn	S249.004	General comments - water bodies	Support	Considers Te Mana o te Wai to be a vital overarching and underpinning concept for how we think about and deal with water.	Make the hierarchy of obligations in Te Mana o te Wai clearer in the definitions and objectives, including prioritising mana whenua and their whakapapa and tikanga in decision-making for water. Make clearer that Te Mana o te Wai guides all policy, plans and consents that impact on three waters, from the earliest stage of consideration and before options are presented to regional council, Planning Committee or consulted on with communities.
S250 John and Jacqueline Diggins	S250.003	General comments - water bodies	Oppose	Cites GWRC Environment Court cases. Is concerned GWRC is trying to introduce rules, and methods to classify all streams, drains, ditches and ephemeral flows as rivers and that this is not consistent with the court rulings or judges findings.	A clear definition of what constitutes a natural waterway needs to be confirmed before PC1 is approved.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S261 Forest & Bird	S261.004	General comments - water bodies	Not Stated	Considers it unclear the identified values for each FMU, and that they should be identified, with at least one environmental outcome for each value. Notes the environmental outcomes objectives appear to be combined, but it is not clear which outcome relates to which value.	Identify the values for each FMU and provide at least one environmental outcome for each value
S261 Forest & Bird	S261.005	General comments - water bodies	Not Stated	Concerned the flow provision do not comply with the NPSFM. Considers environmental flows and levels need to be rules, as do take limits, to enable review of existing consents to bring them in line with new flows and limits. Notes the rules allow taking water below minimum flows, providing for overallocation and considers this contrary to the NPSM. Considers takes below minimum flows and in exceedance of allocation limits should be prohibited. Concerned with the s32 approach to provide flow/allocation provisions for Te Whanganui a Tara "in a later plan change", due to lack of clarity on when it will occur. Considers interim limits need to be set to ensure life supporting capacity requirements for indigenous species are safeguarded. Concerned that take limits/allocation limits may not achieve environmental outcomes.	Amend so environmental flows and levels, and take limits, are rules.
S261 Forest & Bird	S261.007	General comments - water bodies	Not Stated	Considers Schedule 27 A2 and A3 must address all Appendix 2B attributes for all part FMUs. Considers it important to include natural form and character and habitat. Considers if target attribute states are already achieved, the action plan should set out how they will be maintained, which should be reflected in B1(6) and B2, which themselves should be amended to reflect actions to maintain. Considers the schedule should specify that action plans will set out how target attribute states will be achieved within the	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				relevant timeframe, and should be reflected in A1 and B2(1)(b). Notes B3(1) is missing DIN, and that the actions should be broader and which relate to nitrate and DIN. Considers action plans need to integrate with action plans required under 3.25 to return rivers to natural hard bottom states.	
S261 Forest & Bird	S261.011	General comments - water bodies	Not Stated	Considers farm plan 'critical source area' management and small stream stock exclusion provisions need to be strengthened as to protect ephemeral water courses.	Strengthen farm plan 'critical source area' management and small stream stock exclusion provisions to protect ephemeral water courses.
S273 Robert Pavis-Hall, Gaynor Rowswell, Katie Norman, Megan Norman	S273.005	General comments - water bodies	Oppose	Concerned about the open-ended definition for a minimum and lack of guidance on how/where to measure.	Withdraw all measures against the Upper Hutt 'farming' community, and heed its own report.
S276 Jody Louise Sinclair, Joshua William Lowry, Anne Friedarika Sinclair & Tracey Lynn Browne	S276.009	General comments - water bodies	Oppose	Notes there are a number of references to small rivers, less than 1 metre wide but nowhere within the PC1 states what the minimum size is. Considers it unacceptable to have an open-ended definition for a minimum.	Clarify the definition upon which other regulations rely eg. Stock exclusion and fencing rules. Provide a clear minimum width for small rivers
S277 Craig Innes	S277.003	General comments - water bodies	Oppose	The submitter seeks clarity about whether the stream at the rear of their property is listed in the schedule and what wildlife has been identified for this stream. Notes the stream is subject to multiple water control features associated with urban development. Requests that GWRC note	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				that there is no natural passage for fish on the stream.	
S277 Craig Innes	S277.004	General comments - water bodies	Oppose	Objects to the description of Wainuiomata-iti Stream (Wainuiomata Stream). Considers the waterway needs to be described by a proper survey of the river. Notes the waterway appears to be affected by bacterial life and eels are the only species that appear to survive.	Not stated.
S277 Craig Innes	S277.007	General comments - water bodies	Oppose	Seeks an urgent investigation of the extent of the wetland at the end of the Moores Valley Road. Notes they understand extensive areas of Lot 60 DP 354855 is wetland.	Not stated.
S284 Friends of Waiwhetu Stream	S284.002	General comments - water bodies	Support	Concerns surrounding severe water quality of Waiwhetū Stream. Supports targets for reduced contamination, especially for E Coli. Supports the requirement of Territorial Authorities to repair/maintain wastewater pipes and detect and remediate leaks and cross contamination at properties. Supportive of finding alternative funding options for Councils for this work.	Not stated
S287 M. Garcia	S287.011	General comments - water bodies	Oppose	Notes there are a number of references to small rivers, less than 1 metre wide but nowhere within the PC1 states what the minimum size is. Considers it unacceptable to have an open-ended definition for a minimum.	Clarify the definition upon which other regulations rely e.g. Stock exclusion and fencing rules. Provide a clear minimum width for small rivers
S3 Dougal Morrison	S3.005	General comments - water quality improvements	Not Stated	Considers GWRC has not provided scientific evidence that forests have caused significant degradation of freshwater quality in the Te Awarua-o-Porirua and Whanganui-a-tara catchments.	Not stated.
S33 Wellington	S33.003	General comments -	Not Stated	WCC is already engaging in multiple statutory and non-statutory processes in processes to achieve water quality	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
City Council		water quality improvements		improvements. Water quality improvements will be difficult to achieve due to design and construction of existing three waters infrastructure, and constrained resources of local government. Concerned that NRPC1 would require all brownfield development to seek consent for stormwater discharges from both District and Regional Councils, which is an unnecessary duplication.	
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.018	General comments - water quality improvements	Not Stated	Considers there is no indication in GW's water quality data of increased sediment in catchments with a high proportion of plantation forestry. Notes the water clarity of Mangaroa River exceeds guidelines, the TAS set by the NPS-FM, but the test result in this case is an inappropriate surrogate measure for suspended solids and the test failure was due to a natural source of brown water. Disputes the values for required sediment load reductions in Table 8.5 for Mangaroa River, and suggests the data interpretation for Wainuiomata/Black Creek is incorrect. Notes the NPS-FM acknowledges that natural sources of brown water exist and allows different TAS to be set accordingly, which has not been done for Mangaroa and potentially Wainuiomata/Black Creek, although it has been done for Hulls Creek. Concerned that the TAS values listed for Hulls Creek, Mangaroa and Black Creek appear to be default values from the tables and not adjusted to baseline values or reset by GW. In the case of Hulls Creek, the submitter is not aware that this drains a peat swamp and suggests buried iron adjacent to the railways activities is the source of the opalescent water	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				(references photo in original submission).	
S39 Fenaughty Partnership - Riu Huna Farm	S39.009	General comments - water quality improvements	Not Stated	<p>Concerned there has been insufficient information provided to identify problems or problem locations with water quality which impacts the ability to effectively target any remediation or work to improve this.</p> <p>Notes personal changes made to reduce sedimentation and potential deposition of biological pollution in small streams.</p> <p>Concerned the wider sources of contaminants (both by activity and by location) across Mākara and Ohariu is highly speculative as there is only one water quality monitoring site</p> <p>Considers there was little acknowledgement of the majoring flood events, remedial and construction programme carried out in Takarau George and house under construction that have consequent potential for erosion and increased sedimentation.</p>	Not stated.
S101 Wellington International Airport Limited	S101.001	General comments - water quality improvements	Oppose	<p>Policy P30(b)</p> <p>Should the relief sought by the submitter with respect to Chapter 8 of the NRP not be accepted, the submitter opposes the proposed exclusion of these provisions as they relate to Whaitua Te Whanganui-a-Tara.</p>	Retain application of these provisions to Whaitua Te Whanganui-a-Tara (by removing the symbol).
S101 Wellington International Airport Limited	S101.002	General comments - water quality improvements	Amend	<p>Notes new freshwater related objectives and policies within the Proposed NRP seek to give effect to the National Policy Statement for Freshwater Management 2020 ("NPSFM") but some of the provisions also refer to the coastal marine area / coastal environment. Concerned</p>	Delete any reference to the coastal marine area from those provisions which seek to directly give effect to the NPSFM.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				that this will result in the management of the coastal resources in a way that is inconsistent with the New Zealand Coastal Policy Statement ("NZCPS") and the remaining sections of the Operative NRP which are not subject to the Proposed NRPm, and will apply freshwater management concepts to the coastal marine area and the coastal environment which is not appropriate.	
S107 Friends of Waipāhihi Karori Stream	S107.002	General comments - water quality improvements	Support	States that monitoring shows that water quality is poor in the Waipāhihi Karori Stream, particularly from E. coli. Considers that councils need to focus on basics, such as fixing pipes.	Not stated
S107 Friends of Waipāhihi Karori Stream	S107.006	General comments - water quality improvements	Support	Considers the Waipāhihi Karori Stream and its community are likely to be most impacted by the timeline, though may not be a priority from a regional perspective. Concerned that they have been asking for these problems to be solved for decades; community wants to be able to safely use the stream and enjoy more abundant biodiversity.	Not stated
S119 Susan Sturman	S119.001	General comments - water quality improvements	Not Stated	Supports PC1's water elements. Considers there should be no dry weather discharges of wastewater into stormwater. Suggests that cross connections should be actively identified and fixed (at landowners expense if on private land). Concern of hygiene issues in waterways due to sewage contamination. Considers there should be no wet weather overflows of wastewater into stormwater and contamination should not be permitted just because it is raining. Considers anything allowing rain to enter	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				the wastewater system should be actively identified and fixed (at landowners expense if on private lane).	
S185 Ray Beentjes	S185.004	General comments - water quality improvements	Support	Supports targets in the water quality target tables.	Requests as much work as possible is done through environmental limits to achieve water quality targets.
S185 Ray Beentjes	S185.006	General comments - water quality improvements	Not Stated	Key concerns are water quality (particularly e. coli, sediment, algal growth/periphyton, and ecosystem health); amenity; contact recreation; and natural form and character.	<p>Seeks the following: Recognition in the plan of the outstanding kayaking / packrafting / rafting values in the Whaitua are recognised in the plan, particularly for the Hutt Gorge (which has outstanding kayaking, amenity, and landscape values).</p> <p>More work by GWRC to monitor and preserve natural character, and to strengthen objectives, policies, and rules which allow the river to function more naturally, particularly in its reaches influenced by flood protection.</p> <p>Targets for natural character that are similar to the sorts of targets set for water quality and seeks objectives and policies that support these.</p> <p>More work to enhance water quality in the coastal environment, for use of 'flat water' environments to learn and train without worrying about compromising health if contact is made with the water.</p> <p>Retain coastal water quality indicators/targets.</p>
S189 SAMUEL KAHUI	S189.003	General comments - water quality improvements	Support	<p>Considers there has not been enough care for the health of harbours, estuaries, rivers, lakes, streams, wildlife and communities have suffered as a result, and action must be taken.</p> <p>Suggests the regional plan must drive improvement and no longer allow inaction, declining water quality or inefficient water use.</p> <p>Supports measures in Plan Change 1 that</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				will, if implemented properly end harmful wastewater entering directly into our streams and coastal waters, water sensitive urban design becoming the norm in towns and cities of our region, and farms and plantation forests no longer harming waterways and the wildlife that live in them. Considers these are the first steps on the journey to restoring Te Mana o Te Wai - the dignity, integrity, significance, power of water - and our water regaining its mauri. Considers that development done right is possible and built environments can be weaved into the natural world.	
S197 Greg Davies	S197.005	General comments - water quality improvements	Support	Concerned with water quality, (particularly e. coli, sediment, algal growth/periphyton, and ecosystem health); amenity; contact recreation; and natural form and character.	<p>Seeks the following: Recognition in the plan of the outstanding kayaking/packrafting/rafting values in the Whaitua, particularly for the Hutt Gorge (which has outstanding kayaking, amenity, and landscape values).</p> <p>More work by GWRC to monitor and preserve natural character and to strengthen objectives, policies, and rules which allow the river to function more naturally, particularly in its reaches influenced by flood protection.</p> <p>Targets for natural character that are similar to the targets set for water quality and objectives and policies to support these.</p> <p>More work to enhance water quality in the coastal environment, for use of 'flat water' environments to learn and train without compromising health if contact is made with the water.</p> <p>Retain coastal water quality indicators/targets.</p>

S151 Wellington Water Ltd	S151.018	Earthworks	Oppose	Supports the earthworks definition regarding the areas that fall outside Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua. Considers the removal of exclusions for earthworks in Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua will result in a large number of consents for minor earthworks activities in these areas, including in relation to three waters infrastructure. Considers this is likely to have a significant and prohibitive impact on Wellington Water's ability to repair and maintain its network in a timely and cost effective manner.	Retain the proposed earthworks definition (outside Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua) across the full region and delete the earthworks definition which relates to Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua. Proposed definition revisions as follows: Earthworks For Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua only: The alteration or disturbance of land, including by moving, removing, placing, blading, cutting, contouring, filling or excavation of earth (or any matter constituting the land including soil, clay, sand and rock); but excludes gardening, cultivation, and disturbance of

Reinstate the exclusions as given to the other districts.
S177 Transpower New Zealand Limited	S177.009	Earthworks	Amend	Considers the rules for earthworks do not give effect to NPSET, as they do not provide for the reasonable maintenance, upgrading or development of the National Grid. Considers the operative definition exclusion for electricity lines and support structures (including the National Grid) should also apply to the proposed definition for a consistent approach. Considers the definition would be clearer by providing exclusions as a disjunctive list below the definition rather than embedded within definition as a conjunctive list.	Amend provision as follows: For Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua only: The alteration or disturbance of land, including by moving, removing, placing, blading, cutting, contouring, filling or excavation of earth (or any matter constituting the land including soil, clay, sand and rock); but excludes gardening, cultivation, and disturbance of land for the installation of fence posts. Except that, for the purposes of Rules WH.R20, WH.R21 and P.R19, P.R20, 'earthworks' has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Plantation Forestry) Regulations 2017. Earthworks do not include: (a) gardening (b) cultivation (c) disturbance of the land for the installation of fenceposts

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S240 Porirua City Council	S240.009	Earthworks	Amend	Support use of National Planning Standards definition, and limiting application to new provisions to avoid unintended consequences with operative provisions. Seeks that Rule P.R22 is amended to include exclusions for activities like road maintenance. Notes the reference to the National Policy Statement needs to be updated.	Amend definition as follows: For Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua only: The alteration or disturbance of land, including by moving, removing, placing, blading, cutting, contouring, filling or excavation of earth (or any matter constituting the land including soil, clay, sand and rock); but excludes gardening, cultivation, and disturbance of land for the installation of fence posts. Except that, for the purposes of Rules WH.R20, WH.R21 and P.R19, P.R20, 'earthworks' has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Plantation Forestry) Regulations 2017. Resource Management (National Environmental Standards for Commercial Forestry) Regulations 2023
S254 Best Farm Ltd	S254.005	Earthworks	Amend	Notes the definition of earthworks has been expanded and therefore opening a trench to install services would trigger the need for a resource consent if the area of disturbance exceeded 3000m ² .	The original definition be retained or the definition be amended by adding activities such as service trenches and scraping a site for the purpose of determining site levels to the exclusions list.
S255 Woodridge Holdings Ltd	S255.009	Earthworks	Amend	Not stated	The second definition "For all other whaitua"/catchments should apply across the entire region. Add additional exclusions for activities as appropriate.
S257 Kāinga Ora	S257.003	Earthworks	Amend	Generally supports the definition as it aligns with the National Planning Standards. Clarification is sought in the related rules of Chapters 8 and 9 that exclude thrusting, boring, trenching or mole ploughing associated with cable or pipe laying and maintenance.	Retain notified definition, subject to rules being amended to enable works associated with infrastructure. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S261 Forest & Bird	S261.014	Earthworks	Not Stated	Seeks full text is referenced to assist plan users.	Include full text of definition of earthworks (from the NES). Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S263 New Zealand Carbon Farming Group ('NZCF')	S263.012	Earthworks	Support	<p>Does not oppose inclusion of a definition of 'Earthworks' in NRP and notes the definition appropriately replicates the definition required by the National Planning Standards for most activities.</p> <p>With regards to the definition that applies to Rules WH.R20, WH.R21, P.R19 and P.R20, submitter notes that the proposed definition refers to NESPF 2017 and therefore the exception in the definition does not apply to earthworks for the establishment of permanent forests, including commercial forests for carbon sequestration purposes.</p>	Retain 'Earthworks' definition as notified.
S274 Goodman Contractors Limited	S274.001	Earthworks	Oppose	Doesn't make sense to have different definitions for earthworks between different districts in the same region.	Retain the old definition for the entire region.
S275 The New Zealand Transport Agency	S275.003	Earthworks	Amend	Considers the definition is very confined and will not allow for the construction, repair, upgrade or maintenance of infrastructure.	<p>Provide an exclusion (as per (d) "for all other whaitua") to enable construction, repair, upgrade or maintenance of infrastructure where standards are met.</p> <p>Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.</p>
S285 Civil Contractors New Zealand	S285.006	Earthworks	Amend	<p>Considers the definition needs refinement as it will require considerable resource from industry to understand and implement, may escalate project costs, and result in worse outcomes and impact the ability for transport and water infrastructure networks to be repaired or maintained efficiently</p> <p>Considers the new definition for Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua is not needed, as it applies the term too broadly.</p> <p>Considers the addition of 'to a cleanfill area' to 2.2 (i) is problematic as there are constraints around sites in the region at</p>	<p>Reinstate NRP definition of earthworks.</p> <p>Remove 'to a cleanfill area' from the point in definition for 'all other whaitua'.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				the moment and the availability of cleanfill sites needs to be taken into account as this could hamper the ability to deliver infrastructure projects. Notes the definition may result in consent applications being required for minor pipe or road repairs.	
S288 China Forest Group Company New Zealand Ltd	S288.022	Earthworks	Support	Avoids unintended capture in general earthworks rules	Retain deferral of definition to the NES-PF/CF earthworks definition. Align with NES-C.
S183 Yvonne Weeber	S183.014	Effective hectares	Support	Not stated	Not stated
S33 Wellington City Council	S33.008	Environmental outcomes	Support	Support the requirements for environmental outcomes	Retain as notified
S183 Yvonne Weeber	S183.015	Environmental outcomes	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.009	Environmental outcomes	Support	Not stated	Not stated
S261 Forest & Bird	S261.015	Environmental outcomes	Amend	Considers additional objectives are required to meet NPSFM requirements. Seeks objectives WH.O6, WH.O7, WH.O8, P.O5 and P.O6 are included within the definition, which relate to groundwater levels and integrity and the compulsory value of contact recreation. Considers further objectives may be necessary.	Include reference to objectives WH.O6, WH.O7 and WH.O8 and P.O5 and P.O6, and any others required to meet NPSFM requirements. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S183 Yvonne Weeber	S183.016	Erosion and sediment management plan	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.010	Erosion and sediment management plan	Support	Not stated	Not stated
S225 Upper Hutt City Council	S225.033	Erosion and sediment management plan	Amend	Notes reference to "Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region" is identified in stabilisation definition but not in this definition or the schedules.	Seeks inclusion reference to "Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region" for consistency across plan.
S255 Woodridge Holdings Ltd	S255.010	Erosion and sediment management plan	Amend	Notes there are definitions for plantation forestry and vegetation clearance on highest erosion risk land, but no definition associated with earthworks generally.	Add a definition for an erosion and sediment control plan for general earthworks.
S263 New Zealand Carbon Farming Group ('NZCF')	S263.013	Erosion and sediment management plan	Amend	Subject to relief sought in this submission, submitter is unsure whether a definition of 'Erosion and sediment management plan' is necessary for implementation of NRP. Submitter does not oppose definition.	Retain definition of 'Erosion and sediment management plan' as notified where the definition is necessary to assist the implementation of NRP.
S288 China Forest Group Company New Zealand Ltd	S288.023	Erosion and sediment management plan	Amend	Considers separate schedules creates confusion, noting there is overlap between existing NES-CF requirements and PC1.	Work to NES-CF schedule 4 & 5. Avoid cross-over and overlap with existing processes developed under the NES-CF.
S183 Yvonne Weeber	S183.017	Erosion risk treatment plan	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.011	Erosion risk treatment plan	Support	Not stated	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S225 Upper Hutt City Council	S225.034	Erosion risk treatment plan	Support	Not stated	Retain as notified
S33 Wellington City Council	S33.009	Existing wastewater discharge	Oppose	Consider the definition confusing and recommend refining the definition and referencing s124 of the RMA.	Amend to clarify definition
S43 Fulton Hogan Ltd	S43.004	Existing wastewater discharge	Oppose	Opposes the use of different definitions in different parts of the region. Concern this will create confusion and be difficult to understand and implement.	For Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua: Wastewater discharged into water or onto or into land in a manner that may enter surface water : (a) from a wastewater treatment plant that is already authorised by an existing resource consent at the time of application for a new resource consent (the replacement resource consent application may seek a different quality, and/or quantity, and/or discharge location within the same or a downstream waterbody), and/or (b) from a wastewater network catchment or sub-catchment that exists as of 30 October 2023 (date of notification). For all other whaitua: Wastewater discharged into fresh or coastal water from a wastewater treatment plant or a wastewater network that is: (a) already authorised by an existing resource consent at the time of application for a new resource consent (the replacement resource consent application may seek a different quality, and/or quantity, and/or discharge location within the same or a downstream waterbody), and/or (b) from a heavy rainfall event overflow from a wastewater network that has occurred prior to 31 October 2020.
S116 Taumata Arowai	S116.005	Existing wastewater discharge	Amend	Notes that differing terminology used by different groups in different regions makes national comparison of environmental performance difficult. Taumata Arowai will define discharges based on root causes rather than weather condition (e.g. dry	Requests that terminology is aligned with that used in the NPS, WSA, and that being developed by Taumata Arowai, as possible and appropriate. Requests that consideration be given to replacing the descriptors 'dry weather discharge' and 'wet weather discharge', to instead describe wastewater

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				weather discharge and wet weather discharge) and is working to establish nationally consistent wastewater and stormwater terminology. Also noted that the National Planning Standards establish definitions local authorities must use, and that other wastewater, stormwater and drinking water terminology in the NRP have not been amended to align with the Planning Standards. Considers definitions between Taumata Arowai and GWRC should align or at a minimum, not conflict, as this could lead to reporting complications for network operators who need to provide data to both Taumata Arowai and GWRC.	network discharges based on their root cause e.g. a discharge caused by blockages, a discharge caused by plant failure or equipment damage, or a discharge being caused by capacity being exceeded in the wastewater network.
S151 Wellington Water Ltd	S151.019	Existing wastewater discharge	Support	Supports the approach in clause (b) of the new text.	Retain as drafted, or ensure any changes to this definition keep it broad enough to include new (or newly identified) dry weather discharges from the existing wastewater network catchments, as well as wet weather discharge locations created as part of improvement works (e.g. new discharge points from attenuation tanks), or instances where an uncontrolled overflow point is replaced with a new constructed overflow point. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S183 Yvonne Weeber	S183.018	Existing wastewater discharge	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.012	Existing wastewater discharge	Support	Not stated	Not stated
S225 Upper Hutt City Council	S225.035	Existing wastewater discharge	Amend	Not stated	Retain as notified, updating date to reflect a decision date for PC1, not notification date.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S255 Woodridge Holdings Ltd	S255.011	Existing wastewater discharge	Amend	Considers one definition to two catchments and a different definition to all other catchments is inequitable and confusing.	Apply one definition to the entire region.
S285 Civil Contractors New Zealand	S285.007	Existing wastewater discharge	Support	Not stated	Not stated
S183 Yvonne Weeber	S183.019	Harbour arm catchments	Support	Not stated	Not stated

of the Bays Inc					
S206 Winstone Aggregates	S206.024	High risk industrial or trade premise	Oppose	<p>Opposes the activities which "may" be captured within the definition of high risk industrial or trade premise, noting some are unlikely to generate industrial or trade waste contaminants, citing "mineral extraction, refining and reprocessing, storage, and use" in relation to quarrying activities in particular. States no evidence is provided to suggest the listed activities are high risk industrial or trade premises and seeks their removal. Concerned that the activities may be predetermined as meeting the definition. Considers the existing definitions for "industrial activity" and "industrial trade waste" under the NZ Planning Standards are sufficiently clear. Opposes the use of the term contaminants as it increases the scope of the definition. Seeks that the definition is limited to the generation of hazardous substances, as defined in the NZ Planning Standards.</p>	<p>Amend definition as follows:</p> <p>High risk industrial or trade premise An industrial or trade premise that stores, uses or generates contaminants or hazardous substances on-site that are exposed to rain and could become entrained in stormwater. Activities that may occur at these premises could include:</p> <ul style="list-style-type: none"> -boat construction and maintenance -commercial cement, concrete or lime manufacturing or storage -chemical manufacture, formulation or bulk storage, recovery, processing or recycling -fertiliser manufacture or bulk storage -storage of hazardous wastes including waste dumps or dam tailings associated with mining activities -petroleum or petrochemical industries including a petroleum depot, terminal blending plant or refinery, or facilities for recovery, reprocessing or recycling petroleum based materials, -scrap yards including automotive dismantling, wrecking or scrap metal yards -wood treatment or preservation, or bulk storage of treated timber -mineral extraction, refining and reprocessing, storage, and use -explosives and ordnances production, storage, and use -electronics including the commercial manufacturing, reconditioning, or recycling of computers, televisions, and other electronic devices -waste recycling, treatment, and disposal -engineering workshops with metal fabrication, or electroplaters power stations, substations, or switchyards.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S207 Firth Industries Limited	S207.005	High risk industrial or trade premise	Amend	<p>Opposes list of activates which 'could' be high risk industrial or trade premises. Includes various activities which could be managed so that hazardous substances are not exposed to rain (and therefore would not fall within the definition), including bullet point two "commercial cement, concrete or lime manufacturing or storage " which would capture several of Firth's sites. Concerns with the lack of evidence provided that the activities listed are, by default, high risk industrial or trade premises, and as drafted the list is unhelpful to plan readers because it implies that those activities are predetermined as meeting the definition.</p> <p>Considers 'contaminant' is too broad to include in definition as it could include any substance (as per RMA) not just stormwater. All industrial and trade premises could fall under this definition regardless of whether they involve storing, generating, or using hazardous substances. Scope of activities covered by definition is unclear and reference to 'contaminant' should be removed in order to focus on hazardous substance management.</p>	<p>Amend definition as follows:</p> <p>High risk industrial or trade premise An industrial or trade premise that stores, uses or generates contaminants or hazardous substances on-site that are exposed to rain and could become entrained in stormwater. Activities that may occur at these premises could include:</p> <ul style="list-style-type: none"> -boat construction and maintenance -commercial cement, concrete or lime manufacturing or storage -chemical manufacture, formulation or bulk storage, recovery, processing or recycling -fertiliser manufacture or bulk storage -storage of hazardous wastes including waste dumps or dam tailings associated with mining activities -petroleum or petrochemical industries including a petroleum depot, terminal blending plant or refinery, or facilities for recovery, reprocessing or recycling petroleum-based materials, -scrap yards including automotive dismantling, wrecking or scrap metal yards -wood treatment or preservation, or bulk storage of treated timber -mineral extraction, refining and reprocessing, storage, and use -explosives and ordnances production, storage, and use -electronics including the commercial manufacturing, reconditioning, or recycling of computers, televisions, and other electronic devices -waste recycling, treatment, and disposal -engineering workshops with metal fabrication, or electroplaters -power stations, substations, or switchyards.
S209 Enviro NZ Services Ltd	S209.001	High risk industrial or trade premise	Support	<p>Considers limiting the definition to premises that use contaminants that are exposed to rain does not penalise entirely internal operations and encourages good environmental outcomes</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
(Enviro NZ)					
S220 Rosco Ice Cream Ltd	S220.003	High risk industrial or trade premise	Amend	Notes the key points of this definition are that the activity involves contaminants / hazardous substances and that these are exposed to rain. Conditionally supports the definition as the definition requires exposure to the weather.	Rosco seeks the addition of an exception to be added to the end of the definition - as follows: However, where these activities are contained within buildings, full covered or fully banded to prevent discharge of stormwater from the hazardous substance / contaminants, they are excluded from the definition.
S226 Higgins Contractors Limited	S226.002	High risk industrial or trade premise	Amend	Considers definition too vague and could lead to misinterpretation. Suggests for activities not listed, intent of definition appears to be if risk of contaminants entering stormwater, HRITP rules are relevant. Concerns definition puts too much interpretation to the applicant, with risk of non-compliance if GWRC interpret the risk of the activity differently to applicants.	Amend definition of HRITP to be more specific and clearer in the intent. Provide exceptions for HRITPs for example where discharges are treated via an interceptor.
S248 Ara Poutama Aotearoa the Department of Corrections	S248.013	High risk industrial or trade premise	Amend	Supports appropriate control through NRP over high-risk industrial or trade premises but notes provisions proposed by PC1 for high risk industrial or trade premises are unreasonable with respect to control of impervious surfaces, which provide for redevelopment of existing or the creation of new impervious surfaces at high-risk industrial or trade premises as a discretionary activity. Considers approach does not enable a reasonable level of maintenance, upgrading, or development (subject to appropriate conditions) and rules incentivise retaining existing degraded impervious surfaces, and do not recognise new or redeveloped impervious surfaces will perform better at containing hazardous substances and other	Considers amendments are necessary to the rules that relate to new or redeveloped impervious surfaces to provide for a reasonable level of impervious surface development or redevelopment at high-risk industrial or trade premises as a permitted or controlled activity, subject to appropriate conditions.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				contaminants than existing ones. Considers this counter-productive and contrary to objectives of the NRP, which seek to maintain or improve water quality.	
S256 Waste Management NZ Limited	S256.002	High risk industrial or trade premise	Oppose	Considers the definition is ambiguous and should instead refer to 'high risk industrial and trade areas'. Considers the definition should specifically exclude sites (or parts of a site) where industrial and trade activities are undertaken but there is no discharge from these activities to stormwater. Notes various consequential amendments may be required throughout PC1 to address this submission point.	Amend definition as follows: High risk industrial and trade premise areas: Areas of a site where industrial or trade activities are undertaken that drain to a stormwater network, or private stormwater management system that discharges to water or to land where there is potential for the discharge to enter water. Industrial and trade activities: Industrial and trade activities in the high risk industrial and trade areas definition are those that store, use or generate contaminants or hazardous substances on site that are exposed to rain and could become entrained in stormwater. Any other relief or consequential amendments necessary to address the concerns set out in this submission.
S258 BP Oil NZ Ltd, Mobil Oil NZ Ltd, Z Energy Ltd - The Fuel Companies	S258.001	High risk industrial or trade premise	Oppose	Submitter not opposed to concept or intent of the definition of High Risk Industrial and Trade Premises, which is assumed to address the likes of the bulk fuel storage terminals at Seaview, Kaiwharawhara or Miramar. Notes uncertainty in definition that needs to be clarified to ensure broad category of 'petroleum or petrochemical industries' does not include service stations and/or other similar scale refuelling activities undertaken in compliance with the Environmental Guidelines for Water Discharges from Petroleum Industry Sites in New Zealand, Ministry for the Environment, December 1998 (MfE Guidelines for Water Discharges). Does not accept that these types of activities constitute 'high risk' industrial or trade premises.	Amend definition of High Risk Industrial and Trade Premises to exclude service stations and truck stops with a complying interceptor. This could be achieved by making the following changes, or changes to the same effect: High risk industrial or trade premise An industrial or trade premise that stores, uses or generates contaminants or hazardous substances on-site that are exposed to rain and could become entrained in stormwater. Activities that may occur at these premises could include: - boat construction and maintenance - commercial cement, concrete or lime manufacturing or storage - chemical manufacture, formulation or bulk storage, recovery, processing or recycling - fertiliser manufacture or bulk storage - storage of hazardous wastes including waste dumps or dam tailings associated with mining activities

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>The MfE Guidelines for Water Discharges provides an effective regime for ensuring that stormwater discharges do not cause significant adverse effects on the environment. Those guidelines cover stormwater discharges from sites including: retail service stations, truck stops, terminals and depots and lubricating oil blending and grease manufacturing plants.</p> <p>Accepts that, a stormwater consent may be considered appropriate at bulk fuel storage terminals given a range of other operational discharges from such facilities that need to be considered and managed as part of the overall site management, and recognising stormwater management needs to be integrated into the regime. Such a matter is best dealt with through the consent process.</p> <p>Notes for service stations, truckstops and commercial refuelling facilities the risks are well understood and readily managed via compliance with the MfE Guideline for Water Discharges.</p> <p>A number of other jurisdictions effectively address this matter and recognise that service stations, truckstops and commercial refuelling facilities that comply with the MfE Guideline for Water Discharges do not represent a 'high risk'. For example: Environment Waikato has included a "deemed to comply " provision for discharges from service stations and truckstops complying with MfE Guideline for Water Discharges; Auckland Unitary Plan (operative in part) permits industrial and trade discharges listed as moderate risk activities (i.e. service stations are moderate if they comply with the MfE Guidelines as are truckstops (non-service</p>	<p>- petroleum or petrochemical industries including a petroleum depot, terminal, blending plant or refinery, or facilities for recovery, reprocessing or recycling petroleum-based materials, but excludes service stations, truck stops and refuelling facilities that comply with Ministry for the Environment 1998 Environmental Guidelines for Water Discharges from Petroleum Industry Sites in New Zealand.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				station) having an activity area of less than 1,000m ²); and Northland Regional Plan specifically excludes service stations, truck stops and refuelling facilities complying with MfE Water Discharge Guidelines from the definition of High Risk Industrial or Trade Premises and provides for such facilities as a permitted activity. Considers service stations, truckstops or commercial refuelling facilities that comply with MfE Water Discharge Guidelines should be excluded from definition of high risk industrial and trade premises, and managed through stormwater provisions in a way that is commensurate to the level of risk.	
S17 John Easter	S17.001	Highest erosion risk land (plantation forestry)	Oppose	Considers Makara and Ohariu catchments are faulted with variable aspects and topography. Potential erosion varies within sub catchments, which cannot be determined through aerial scanning data.	Considers erosion potential of all land must be based on evidence from site investigation. Considers Map 92 is not fit for purpose other than as a tool to indicate where specific site investigation should be undertaken.
S18 PF Olsen Ltd	S18.004	Highest erosion risk land (plantation forestry)	Oppose	Considers that there is more research available to determine landslide by susceptibility, citing recent New Zealand research.	Delete the mapping layer or have it peer reviewed to establish its scientific validity.
S44 Sue Hawkins	S44.001	Highest erosion risk land (plantation forestry)	Oppose	Farms should be assessed on a singular basis due to diverse contours in the Makara/Ohariu region. Already controlled by RMA regulations and forestry rules. Lack of evidence to support assumption that steep slopes are a significant source of sediment.	REVIEW the general conditions relating to Forestry on risk land.
S183 Yvonne Weeber	S183.022	Highest erosion risk land (plantation forestry)	Support	Not stated	Not stated
S193 Wairarapa Federated Farmers	S193.022	Highest erosion risk land (plantation forestry)	Oppose	Considers the methodology is not fit for purpose	Delete definition Make any consequential amendment(s) necessary to give effect to the relief sought.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S206 Winstone Aggregate s	S206.025	Highest erosion risk land (plantation forestry)	Oppose	Opposes the mapping associated with the definition. Considers the mapping too high level and unsubstantiated. Seeks for the existing approach (including the existing definition of "erosion prone land ") to be retained until a robust vegetation and land stability mapping exercise is undertaken. Opposes the definition as being subject to the Freshwater Planning Process, and considers the definition and associated rules relate to soil conservation rather than freshwater. Considers the approach inconsistent with RPS Proposed Change 1, which is subject to the Schedule 1 Process.	Update mapping with accurate and evidence-based mapping, or delete definition and retain existing NRP definition: Erosion prone land The pre-existing slope of the land exceeds 20 degrees. Should the definition be retained, seek it be subject to the Part 1 Schedule 1 Process and not the Freshwater Planning Process.
S210 Guildford Timber Company Limited, Silverstream Forest Limited and the Goodwin Estate Trust.	S210.007	Highest erosion risk land (plantation forestry)	Oppose	Opposes mapping of 'highest erosion risk land (plantation forestry)' and 'highest erosion risk land (woody vegetation)'. Notes the NES-CF uses a different erosion susceptibility classification tool that divides the NZ landscape into 4 erosion categories: green (low) and yellow (moderate) - land less likely to erode where commercial forestry activities are permitted (subject to conditions being met); Orange (high risk) and red (very high risk) - land more likely to erode where most forestry activities can't be carried out on red-zoned land without resource consent, and some activities such as earthworks also require consent on orange-zoned land. Using this classification the submitters land is zoned green and yellow on the Ministry of Primary Industries (MPI) mapping of areas, meaning forestry activity is permitted under the NES-CF subject to meeting conditions. This classification seems to be in direct conflict	Seeks the following: The management of commercial forestry activities on the submitters land be undertaken in accordance with the erosion susceptibility classification tool and the requirements of the NES-CF; That these PC1 definitions and provisions be deleted or the NRP be amended to be consistent with and take the same approach as the NES-CF - a more restrictive approach is not justified; Mapping of 'highest erosion risk land (plantation forestry)' and 'highest erosion risk land (woody vegetation)' to be improved to a higher quality so that when zooming in on a site on the map a resource user can easily determine where the relevant areas are located on a site.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				to the maps prepared by GWRC which include 'highest erosion risk land (plantation forestry)' over the submitters land. The submitter therefore questions why there is such a variation in the classification of their site, and consider it is more appropriate for commercial forestry on its land to be managed through the NES-CF. Considers the quality of the mapping is poor and difficult to tell where the areas shown on Maps 94 and 95 start and finish on the submitter's site due to the pixelation that occurs when zooming in on a particular area. This poor mapping quality needs to be resolved so land users are able to determine where these areas are on their property, and the poor mapping could cause GWRC compliance issues at a later date. Considers it not possible for individual submitters to determine the extent their land is affected and to make a submission, this mapping should be redone and that aspect of the plan re-notified.	
S263 New Zealand Carbon Farming Group ('NZCF')	S263.015	Highest erosion risk land (plantation forestry)	Oppose	Submitter opposes proposed Maps 92 and 95 in their entirety. Does not consider the definition of 'Highest erosion risk land (plantation forestry)' is necessary or appropriate.	Delete definition of 'Highest erosion risk land (plantation forestry)' in its entirety.
S288 China Forest Group Company New Zealand Ltd	S288.025	Highest erosion risk land (plantation forestry)	Oppose	Considers the map process inappropriate for purpose and unjustified.	Delete. Consult properly and work with industry.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S2 Horokiwi Quarries Ltd	S2.011	Highest erosion risk land (pasture)	Oppose	<p>Opposes the mapping associated with these definitions, and in particular the "high erosion risk land (woody vegetation)" which is referenced in rules. The submitter demonstrates how the mapping is applied to their site in the raw submission</p> <p>Concerned the mapping is too high level and has not been substantiated. States that it is unclear how this mapping has been based, or whether it has been trothed. For example, the mapping of "Highest erosion risk land (Woody vegetation)" includes many small areas of identified land that are incohesive (the size of each individual square identified in the maps is 5m by 5m). The submitter questions the value of regulating small, incohesive areas of woody vegetation, given that the controlled activity threshold for vegetation clearance is 200m².</p> <p>To ensure that the maps (and the rules for vegetation removal) are efficient to administer and effective at achieving their intended outcome, the submitter considers that the maps should be amended to only identify cohesive areas of woody vegetation, and remove incohesive or isolated areas. For consistency with the rules, isolated areas smaller than 200m² should be removed from the maps.</p> <p>The submitter appreciates that this approach seeks to nuance the existing definition of 'erosion-prone land' in the operative plan which simply is defined by the slope of the land. However, the submitter considers that until GWRC has</p>	<p>Update all the mapping (pasture, woody vegetation and plantation forestry) with accurate and evidence-based mapping, or delete definitions and retain existing definition of "erosion prone land" as shown below:Erosion prone land The pre-existing slope of the land exceeds 20 degrees.</p> <p>Should the definitions be retained, the submitter seeks that those definitions are subject to the Part 1 Schedule 1 Process and not the Freshwater Planning Process.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>undertaken a robust vegetation and land instability mapping exercise, the former approach should be retained.</p> <p>Opposes notifying these definitions as part of the Freshwater Planning Process as the definition and associated rules relate to soil conservation and not freshwater. The submitter also notes that this would be inconsistent with the approach taken to the overarching objective and policy (derived from S2 of the RMA) of the Proposed Change 1 Regional Policy Statement, which have been confirmed by GWRC officers as subject to the Schedule 1 Process.</p>	
S17 John Easther	S17.002	Highest erosion risk land (pasture)	Amend	<p>Considers Makara and Ohariu catchments are faulted with variable aspects and topography. Potential erosion varies within subcatchments, which cannot be determined through aerial scanning data.</p>	<p>Considers erosion potential of all land must be based on evidence from site investigation. Considers Map 92 is not fit for purpose other than as a tool to indicate where specific site investigation should be undertaken.</p>
S18 PF Olsen Ltd	S18.005	Highest erosion risk land (pasture)	Oppose	<p>Considers that there is more research available to determine landslide by susceptibility, citing recent New Zealand research.</p>	<p>Delete the mapping layer or have it peer reviewed to establish its scientific validity.</p>
S105 Hannah Bridget Gray (No2) Trust	S105.003	Highest erosion risk land (pasture)	Amend	<p>It is important that land owners understand the practical definition of 'highest erosion risk land (pasture). The definition provided refers to a specific map at a point in time.</p> <ul style="list-style-type: none"> - does not enable landowners to accurately judge the impact of their impacts - does not enable farm environment plan certifiers to accurately evaluate yearly farm plans if the GWRC map is not up to date. -creates a reliance on GWRC re-mapping activities 	<p>Provide a clear definition of what Highest erosion risk land (pasture) is rather than referring to a point in time map.</p>

Aggregates		land (woody vegetation)		level and unsubstantiated, noting that high erosion risk land (woody vegetation) is shown to be within an operational quarry. Seeks for the existing approach (including the existing definition of "erosion prone land") to be retained until a robust vegetation and land stability mapping exercise is undertaken. Opposes the definition as being subject to the Freshwater Planning Process, and considers the definition and associated rules relate to soil conservation rather than freshwater. Considers the approach inconsistent with RPS Proposed Change 1, which is subject to the Schedule 1 Process.	<p>NRP definition: Erosion prone land The pre-existing slope of the land exceeds 20 degrees.</p> <p>Should the definition be retained, seek it be subject to the Part 1 Schedule 1 Process and not the Freshwater Planning Process.</p>
S225 Upper Hutt City Council	S225.038	Highest erosion risk land (woody vegetation)	Amend	Support as mapped areas are consistent with areas identified as high slope in Council's Proposed Plan Change 47.	Seek consistency with District Council hazard mapping.
S248 Ara Poutama Aotearoa the Department of Corrections	S248.015	Highest erosion risk land (woody vegetation)	Neutral	Notes their submission on the provisions and maps that relate to this definition.	Retain as notified (noting the submission points on the maps and provision).
S288 China Forest Group Company New Zealand Ltd	S288.025	Highest erosion risk land (woody vegetation)	Oppose	Considers the map process inappropriate for purpose and unjustified.	Delete. Consult properly and work with industry.
S17 John Easther	S17.005	Hydrological control	Amend	Considers it is not possible to consider hydrological control without considering formative effects of extreme floods and droughts.	Considers interpretation needs to include flood risk management. Hydrological controls must consider effects of the Makara Stream mouth opening / closure on deposition and oxygen depletion.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S33 Wellington City Council	S33.011	Hydrological control	Oppose	Consider the proposed definition describes discharges, as set out under s15 of the RMA, and does not demonstrate how hydrological controls manage stormwater runoff.	Amend definition as follows: Hydrological control: means the management of a range of stormwater flows and volumes, and the frequency and timing of those flows and volumes, from a site or sites through on site management processes for the purpose of reducing bank erosion, slumping, or scour, to protect fresh water ecosystem health and well being.
S38 Summers et Group Holdings Limited	S38.001	Hydrological control	Amend	Questions how the definition will assist in the interpretation of provisions as it does not outline what the controls are.	Amend definition to outline what hydrological controls are, including examples and a schedule with technical standards.
S116 Taumata Arowai	S116.007	Hydrological control	Amend	Notes that differing terminology used by different groups in different regions makes national comparison of environmental performance difficult. Taumata Arowai will define discharges based on root causes rather than weather condition (e.g. dry weather discharge and wet weather discharge) and is working to establish nationally consistent wastewater and stormwater terminology. Also noted that the National Planning Standards establish definitions local authorities must use, and that other wastewater, stormwater and drinking water terminology in the NRP have not been amended to align with the Planning Standards. Considers definitions between Taumata Arowai and GWRC should align or at a minimum, not conflict, as this could lead to reporting complications for network operators who need to provide data to both Taumata Arowai and GWRC.	Requests that terminology is aligned with that used in the NPS, WSA, and that being developed by Taumata Arowai, as possible and appropriate. Requests that consideration be given to replacing the descriptors 'dry weather discharge' and 'wet weather discharge', to instead describe wastewater network discharges based on their root cause e.g. a discharge caused by blockages, a discharge caused by plant failure or equipment damage, or a discharge being caused by capacity being exceeded in the wastewater network.
S151 Wellington Water Ltd	S151.021	Hydrological control	Oppose	Opposes this definition and notes it will need to reflect the outcomes of the RPS process. Refers to comments made in Section A of submission..	Amend definition to ensure it is consistent with (or at least not inconsistent with) the RPS definition, and preserves flexibility for managing flows from small to large.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					Supports standards based on a specified depth of rainfall retention (e.g. retention of the first 5mm of rainfall depth). Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S161 GILLIES GROUP MANAGE MENT LTD	S161.007	Hydrological control	Amend	Considers the definition will not assist in the interpretation of provisions as it does not outline actual controls. Notes the definition of "stormwater treatment system" provides examples as well as specifications in Schedule 28.	Amend definition to outline what hydrological controls are, including examples and a schedule with technical standards.

S254 Best Farm Ltd	S254.006	Hydrological control	Amend	Considers the definition is vague and ambiguous, noting 'range' does not define what event or flow scenario must be attenuated or controlled, and that the requirement to 'replicate' natural processes is onerous and likely impossible to achieve.	Simplify the definition to state the design event that must be controlled and delete 'in a way that replicated natural processes'.
S257 Kāinga Ora	S257.004	Hydrological control	Oppose	Considers the definition is non-specific and not appropriate for use as a permitted standard. Questions who is responsible for determining the PA status, and on what basis.	Amendment sought to provide greater clarity as to what constitutes a hydrological control. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S258 BP Oil NZ Ltd, Mobil	S258.002	Hydrological control	Support	Supports hydrological control definition	Retain definition of hydrological control.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Oil NZ Ltd, Z Energy Ltd - The Fuel Companies					
S286 Taranaki Whānui	S286.007	Hydrological control	Amend	<p>Considers definition does not provide assistance in implementation of associated rules as it does not outline examples of what hydrological controls are acceptable. Considers there is no guidance on what compliant hydrological controls would look like, and is an issue considering it is required for all new impervious surfaces over 30sqm.</p>	Amend definition to improve clarity.
S2 Horokiwi Quarries Ltd	S2.012	Impervious surfaces	Amend	<p>Submitter notes that the definition would currently capture a range of surfaces that may exist within a quarry, including:</p> <ul style="list-style-type: none"> - Concrete pads, - Haul roads, - Site offices, - Storage sheds, - Processing plant. <p>Considers based on the Section 32 evaluation, the impervious surface rules are intended to capture urban development (e.g. residential, commercial and industrial activities in an urban area). Concerned the definition and associated rules as drafted would capture quarrying activities and prevent a reasonable consenting pathway.</p> <p>Seeks the definition explicitly exclude impervious surfaces associated with quarrying activities.</p>	<p>Amend the definition of "impervious surface" as follows:</p> <p>Impervious surfaces Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes:</p> <p>roofs paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios, and excludes:</p> <p>grassed areas, gardens and other vegetated areas porous or permeable paving slatted decks which allow water to drain through to a permeable surface porous or permeable paving and living roofs roof areas with rainwater collection and reuse any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)any impervious surface associated with a quarrying activity</p>
S26 Christine Stanley	S26.010	Impervious surfaces	Not Stated	<p>Concerned that specifications regarding impervious surface water collection into</p>	Delete impervious surfaces definition

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				tanks is not included in costing assessments in the s32 report.	
S33 Wellington City Council	S33.012	Impervious surfaces	Oppose	Definition is complex and difficult to implement. The use of impermeable surfaces (permeability) is also a matter of consideration for District Plans as set out in 80E of the RMA and 3.5(4) of the NPS-FM.	Delete definition
S38 Summerset Group Holdings Limited	S38.002	Impervious surfaces	Amend	Considers roofing with rainwater collection, complying with hydraulic neutrality rules included in recent district plans in these catchments should not be considered an impervious surface. Suggests that the implementation of grey water reuse would add to development costs, and is not a requirement of any regulation including PC1 or the NRP.	Amend definition as follows: Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes: <ul style="list-style-type: none"> • roofs • paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios, and excludes: • grassed areas, gardens and other vegetated areas • porous or permeable paving • slatted decks which allow water to drain through to a permeable surface • porous or permeable paving and living roofs • roof areas with rainwater collection and reuse
S101 Wellington International Airport Limited	S101.014	Impervious surfaces	Oppose	Considers the Airport should therefore be excluded from this definition to avoid unnecessary duplication of the methods that relate to impervious surfaces where located at the Airport.	Amend the definition to exclude the Airport. Or delete and revert to Operative NRP.
S105 Hannah Bridget Gray (No2) Trust	S105.004	Impervious surfaces	Amend	Use of rain tanks, grey water reuse systems or any form of water collection and reuse should be encouraged as a responsible and environmentally friendly use of water rather than included in calculations as if it were environmentally damaging.	roof areas with rainwater collection and reuse any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S116 Taumata Arowai	S116.008	Impervious surfaces	Amend	Notes that differing terminology used by different groups in different regions makes national comparison of environmental performance difficult. Taumata Arowai will define discharges based on root causes rather than weather condition (e.g. dry weather discharge and wet weather discharge) and is working to establish nationally consistent wastewater and stormwater terminology. Also noted that the National Planning Standards establish definitions local authorities must use, and that other wastewater, stormwater and drinking water terminology in the NRP have not been amended to align with the Planning Standards. Considers definitions between Taumata Arowai and GWRC should align or at a minimum, not conflict, as this could lead to reporting complications for network operators who need to provide data to both Taumata Arowai and GWRC.	Requests that terminology is aligned with that used in the NPS, WSA, and that being developed by Taumata Arowai, as possible and appropriate. Requests that consideration be given to replacing the descriptors 'dry weather discharge' and 'wet weather discharge', to instead describe wastewater network discharges based on their root cause e.g. a discharge caused by blockages, a discharge caused by plant failure or equipment damage, or a discharge being caused by capacity being exceeded in the wastewater network.
S151 Wellington Water Ltd	S151.022	Impervious surfaces	Amend	Broadly supports the definition, but reserves position as to the detail as some technical changes required. For example, the use of "stormwater" here is not consistent with how that term is defined in the NRP and some other terms are used inconsistently. Concerned about how the exemptions for tanks and rainwater collection will impact the applicability of the stormwater rules.	Replace the reference to "stormwater" with 'rainfall', 'water', 'precipitation', or similar. Review and refine the list of exclusions in light of their implications for the rules. Refer to aggregate rather than metal. Remove duplicate references to 'porous or permeable paving'. Reconsider the reference to "reuse" which should be for 'non-potable purposes' to align with RPS language rather than 'grey water'. The final two bullet points have different approaches to permanent plumbing and use different terms for the same outcome (non-potable water use); this needs to be reconsidered also. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S161 GILLIES GROUP MANAGE MENT LTD	S161.008	Impervious surfaces	Amend	Considers a roof with rainwater collection should be not be considered an impervious surface where it complies with hydraulic neutrality rules. Considers the implementation of greywater reuse is not a regulatory requirement and will significantly add to development costs.	Amend definition as follows and make any other consequential relief necessary to give effect to this submission point: Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes: roofs paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios, and excludes: grassed areas, gardens and other vegetated areas porous or permeable paving slatted decks which allow water to drain through to a permeable surface porous or permeable paving and living roofs roof areas with rainwater collection and reuse any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)
S165 PUKERUA HOLDING S LIMITED	S165.008	Impervious surfaces	Amend	Considers a roof with rainwater collection that complies with hydraulic neutrality rules in district plans should not be considered impervious surfaces. Implementing grey water reuse would add to development costs and is not a requirement of any regulation including PC1 or the NRP.	Amend definition as follows: Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes: roofs, paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios, and excludes: grassed areas, gardens and other vegetated areas, porous or permeable paving, slatted decks which allow water to drain through to a permeable surface, porous or permeable paving and living roofs, roof areas with rainwater collection and reuse , any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)
S169 KORU HOMES NZ LIMITED	S169.002	Impervious surfaces	Amend	A roof with rainwater collection should be excluded from impervious surfaces definition if it complies with hydraulic neutrality rules in District Plans. Implementing greywater reuse increases costs and is not a requirement of any regulation including PC1 or the NRP.	Amend definition as follows and make any other consequential relief necessary to give effect to this submission point: Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes: roofs, paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios, and

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					excludes: grassed areas, gardens and other vegetated areas, porous or permeable paving, slatted decks which allow water to drain through to a permeable surface, porous or permeable paving and living roofs, roof areas with rainwater collection and reuse, any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)
S173 ARAKUR A PLAINS DEVELOP MENT LIMITED	S173.008	Impervious surfaces	Amend	Considers a roof with rainwater collection should be not be considered an impervious surface where it complies with hydraulic neutrality rules. Considers the implementation of greywater reuse is not a regulatory requirement and will significantly add to development costs.	Amend definition as follows and make any other consequential relief necessary to give effect to this submission point: Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes: roofs, paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios, and excludes: grassed areas, gardens and other vegetated areas, porous or permeable paving, slatted decks which allow water to drain through to a permeable surface, porous or permeable paving and living roofs, roof areas with rainwater collection and reuse, any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)
S177 Transpower New Zealand Limited	S177.012	Impervious surfaces	Neutral	Notes access to National Grid transmission lines and structures in rural areas is by vehicular access tracks which if considered to be impervious surfaces, could lead to a requirement for resource consent for routine reconditioning of existing access tracks and create an impediment to the operation and maintenance of the National Grid, contrary to policy 2 and policy 5 of NPSET. Considers for the avoidance of doubt, access tracks (including vehicular access tracks) should be excluded from definition of impervious surfaces.	Impervious surfaces Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes: roofs paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios, and excludes: grassed areas, gardens and other vegetated areas access tracks (including vehicular access tracks)

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				onerous given end state of the environment and effects remaining the same. Considers it egregious to require 'like for like' replacements and renewals, which are often required for ongoing function of public goods, to be considered in the same vein as full redevelopments of brownfield sites.	
S240 Porirua City Council	S240.013	Redevelopment	Amend	<p>Considers the definition does not work in the context of the associated rules. Notes that Policy WH.P2 seeks to "encourage" redevelopment, but associated provisions do not permit the associated increases in impervious surfaces that are included in this definition which would be expected with the use of this term in a policy. Notes that WH.R4 refers to "redevelopment of existing impervious surfaces" which is unnecessary as the definition of redevelopment is inclusive of impervious surfaces.</p> <p>Concerned the definition would capture small-scale redevelopment such as rooms being added on to existing homes. Considers these should be exempted as the Proposed Porirua District Plan would address these additional surfaces. In addition 'urban environment' is a term defined in the NPS-UD, and it would provide greater certainty than 'urbanised property'.</p>	<p>Amend the definition as follows:</p> <p>For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property in an urban environment (i.e including brownfield development and upgrades to existing roads etc.) in relation to stormwater effects. this includes the replacement, reconstruction or addition (new) of impervious surfaces. Excludes: -minor maintenance or repairs to roads, carparking areas, driveways and paving -installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing -activities that only involve the re-roofing of existing buildings-extensions to existing buildings</p>
S247 Carrus Corporation Ltd	S247.007	Redevelopment	Amend	<p>Considers the definition should exclude minor alterations and additions to existing buildings to provide for the small redevelopment of existing sites as a permitted activity in associated rules.</p> <p>Notes the suggested 30m² amendment aligns with recent changes to the Building</p>	<p>Amend definition and make any other consequential amendments necessary to give effect to this submission point, to provide for small scale alterations and additions to existing buildings:</p> <p>For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property (i.e including brownfield development upgrades to existing roads etc.) in relation to</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Regulations for sheds to avoid consenting requirements.	stormwater effects. this includes the replacement, reconstruction or addition (new) of impervious surfaces. Excludes: minor maintenance or repairs to roads, carparking areas, driveways and paving installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing activities that only involve the re-roofing of existing buildings New buildings or alterations and additions to existing buildings of less than 30m²
S248 Ara Poutama Aotearoa the Department of Corrections	S248.017	Redevelopment	Amend	<p>Seeks reference to redevelopment of existing urbanised property is removed, as the definition also applies to rules that are not exclusively limited to redevelopment of urbanised property - refers to WH.R11 for example.</p> <p>Secondly, reference to "minor" under the first bullet point should be removed as the term 'minor' is subjective and adds uncertainty to scope of definition.</p>	<p>Amend as follows: For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property (i.e brownfield development, upgrades to existing roads etc.) in relation to stormwater effects, this includes is the replacement, reconstruction or addition (new) of impervious surfaces. Excludes: -minor maintenance or repairs to roads, carparking areas, driveways, and paving -installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing -activities that only involve the re-roofing of existing buildings.</p>
S252 Thames Pacific	S252.007	Redevelopment	Amend	<p>Considers the definition should exclude minor alterations and additions to existing buildings to provide for the small redevelopment of existing sites as a permitted activity in associated rules.</p> <p>Notes the suggested 30m² amendment aligns with recent changes to the Building Regulations for sheds to avoid consenting requirements.</p>	<p>Amend definition and make any other consequential amendments necessary to give effect to this submission point, to provide for small scale alterations and additions to existing buildings:</p> <p>For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property (i.e including brownfield development upgrades to existing roads etc.) in relation to stormwater effects. this includes the replacement, reconstruction or addition (new) of impervious surfaces. Excludes: -minor maintenance or repairs to roads, carparking areas, driveways and paving -installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					-activities that only involve the re-roofing of existing buildings- New buildings or alterations and additions to existing buildings of less than 30m²
S255 Woodridge Holdings Ltd	S255.014	Redevelopment	Amend	<p>Considers the definition of redevelopment should not include the word redevelopment as that is what is being defined.</p> <p>Notes the definition uses the words "existing urbanized property" and "brownfield development" but does not define what these are.</p> <p>Suggests it will be hard to know what is an "upgrade" and what is minor maintenance.</p> <p>Suggests existing developments have consent or existing use rights and should have the right to replace existing hard surfaces without the need for resource consent and replacing an existing drive, where no household unit's or EHU'S are proposed is not a redevelopment but maintenance and the same applies to Councils' roads and other hard surfaces and infrastructure. If they are not being widened or lengthened and the surface area is the same or very similar then this is not redevelopment.</p>	Amend definition along the following lines:
S257 Kāinga Ora	S257.006	Redevelopment	Oppose	Opposes the inclusion of reconstruction and replacement within the definition.	<p>Amendments sought</p> <p>Remove "reconstruction" and "replacement" from definition. Alternatively, create an appropriate exclusion for larger areas where no treatment is provided.</p> <p>Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.</p>
S258 BP Oil NZ Ltd, Mobil Oil NZ Ltd, Z Energy Ltd - The	S258.004	Redevelopment	Amend	<p>Supports exclusion of trenching and resurfacing associated with installation, maintenance or repair of underground infrastructure.</p> <p>Supports exclusion of minor maintenance or repairs to carparking areas, driveways</p>	<p>Amend the definition of 'redevelopment' to also exclude resurfacing that does not involve re-direction of existing stormwater flows or drainage networks, as follows:</p> <p>Redevelopment For the purpose of assessment of a proposal</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Fuel Companies				and paving. Seeks exclusion for resurfacing that does not involve re-direction of existing stormwater flows or drainage networks, for minor works to pave surfaces that may not fall into one of the other categories of excluded activities, but which will not alter existing stormwater flows or volumes.	involving the redevelopment of an existing urbanised property (i.e. brownfield development, upgrades to existing roads etc.) in relation to stormwater effects, this includes the replacement, reconstruction or addition (new) of impervious surfaces. Excludes: <ul style="list-style-type: none"> • minor maintenance or repairs to roads, carparking areas, driveways and paving • installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing • activities that only involve the re-roofing of existing buildings; and • resurfacing that does not involve re-direction of existing stormwater flows or drainage networks.
S275 The New Zealand Transport Agency	S275.004	Redevelopment	Amend	Supports excluding 'minor maintenance and repairs to roads...' and 'installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing'. Seeks that the scale of maintenance and repair works is not limited to "minor"	Delete "minor" where it appears before "maintenance and repairs to roads". Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S183 Yvonne Weeber	S183.037	Registration	Support	Not stated	Not stated
S183 Yvonne Weeber	S183.038	Registered forestry adviser	Support	Not stated	Not stated
S238 Greater Wellington Regional Council	S238.007	Registered forestry adviser	Amend	Notes the legislation reference needs updating	Amend as follows: Registered forestry adviser Means a person registered under s63Q or s63T of Forests (Regulation of Log Traders and Forestry Advisers) Amendment Act 1949 2020 that who is authorised to give advice that relates to:
S263 New Zealand Carbon Farming Group ('NZCF')	S263.017	Registered forestry adviser	Amend	Does not oppose the definition of 'Registered forestry adviser' subject to relief sought in this submission. Considers the definition inappropriately narrows advice that may be given by a	Amend definition of 'Registered forestry adviser' as follows: "Means a person registered under s63Q or s63T of Forests (Regulation of Log Traders and Forestry Advisers) Amendment Act 2020 that is authorised to

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				person registered under the Forests (Registration of Log Traders and Forest Advisers) Amendment Act 2020. That is, section 63M of the Forests (Registration of Log Traders and Forest Advisers) Amendment Act 2020 includes a more fulsome list of matters on which advice may be given. Notes that no rationale for narrowing these matters in the proposed definition is given in the Section 32 Report. Considers to extent that a definition is necessary, the definition should include all matters in Section 63M and seeks that definition is amended accordingly.	provide a forestry advice service defined by s63M of the Forests (Regulation of Log Traders and Forestry Advisers) Amendment Act 2020. give advice that relates to: (a) the establishment, management, or protection of a forest, and (b) the management or protection of land used, or intended to be used, for any purpose in connection with a forest or proposed forest, including biophysical and land use topics described in Ministry for Primary Industries, 2023, Guidance: What is a forestry adviser?, and (c) the beneficial effects of forests, including how they contribute to environmental outcomes."
S288 China Forest Group Company New Zealand Ltd	S288.027	Registered forestry adviser	Amend	Notes registered members of the NZ Institute of Forestry are automatically also Registered Forestry Advisors.	Add sub-clause (d);and includes a Registered Member of the New Zealand Institute of Forestry.
S18 PF Olsen Ltd	S18.008	Replanting	Support	Supports consistency with higher order documents i.e. NES-CF	Retain as notified
S183 Yvonne Weeber	S183.039	Replanting	Support	Not stated	Not stated
S222 Environmental Defence Society Inc.	S222.006	Replanting	Amend	Refers to outdated regulations	Refer to updated regulations - NES-CF.
S261 Forest & Bird	S261.021	Replanting	Not Stated	Seeks full text is referenced to assist plan users.	Include full text of definition. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S263 New Zealand	S263.018	Replanting	Support	Does not oppose inclusion of a definition of 'Replanting' in NRP as term should be	Retain definition of 'Replanting' as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Carbon Farming Group ('NZCF')				consistently understood where it is used in provisions of NRP, . Notes the proposed definition refers to NESPF 2017 and as such does not address establishment of permanent forests, including commercial forests for carbon sequestration purposes.	
S288 China Forest Group Company New Zealand Ltd	S288.029	Replanting	Amend	Considers there is misalignment with the NES-CF.	Amend to: has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Commercial Forestry Regulations 2023).
S44 Sue Hawkins	S44.002	Sacrifice paddocks	Oppose	Concerned about the financial implications of sacrificing paddocks and the practicalities of fencing off rivers due to the nature of the land. The area has been involved in revegetation projects and pest control activities. Fencing off the river will be impractical due to the nature of the slopes, and previous flood damage has caused loss of structures, causing more damage downstream. Could meet council description of Clean Green Belt descriptive.	No decision requested but seeks an independent review of the provision.
S183 Yvonne Weeber	S183.040	Sacrifice paddocks	Support	Not stated	Not stated
S261 Forest & Bird	S261.022	Sacrifice paddocks	Not Stated	Seeks for the meaning set out in Regulation 3 of the Resource Management (National Environmental Standards for Freshwater) Regulations 2020 be set out in full for ease of use, consistent with PC1's treatment of the definition of "threatened species".	Amend as follows: means an area on which-- (a) cattle are repeatedly, but temporarily, contained (typically during extended periods of wet weather); and (b) the resulting damage caused to the soil by pugging is so severe as to require resowing with pasture species Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

S18 PF Olsen Ltd	S18.009	Stabilisation	Amend	Seeks consistency across the plan. Seeks clarification on if the definition applies for forestry earthworks.	Amend to clarify definition across the entire plan. Exclude earthworks for forestry from this definition.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					For plantation forestry, default to the NES-CF.
S183 Yvonne Weeber	S183.042	Stabilisation	Support	Not stated	Not stated
S193 Wairarapa Federated Farmers	S193.026	Stabilisation	Oppose	Suggests retaining the operative definitions for improved efficiency	Delete definition Make any consequential amendment(s) necessary to give effect to the relief sought.
S210 Guildford Timber Company Limited, Silverstre am Forest Limited and the Goodwin Estate Trust.	S210.010	Stabilisation	Support	Not stated	Seeks definition of 'stabilisation' be retained as currently written.
S225 Upper Hutt City Council	S225.042	Stabilisation	Support	Not stated	Retain as notified
S255 Woodridg e Holdings Ltd	S255.015	Stabilisation	Amend	Considers applying a definition to part of the region and nothing to the rest is inequitable and confusing. The definition should acknowledge that some areas inherently stable without the need to measures to be undertaken, eg.: exposed rock surfaces.	Provide one definition for the entire region. Amend to acknowledge that some areas are inherently stable and as such do not require stabilisation.
S257 Kāinga Ora	S257.007	Stabilisation	Support	Supports proposed wording.	Retain notified definition
S288 China Forest Group Company	S288.030	Stabilisation	Amend	Notes other methods are not included. Concerned PC1 proposes Schedule 34 ESC, that references methods from forest practices guides, but these are missed	Clarify relationship between earthworks and forestry earthworks.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
New Zealand Ltd				from the definition, which only includes GWRC ESC guideline 2021.	
S17 John Easter	S17.006	Stormwater	Amend	Considers current interpretation is a urban concept that is not relevant to rural catchments.	Change Stormwater to Runoff or alternatively introduce definition of Runoff that is appropriate to rural catchments.
S116 Taumata Arowai	S116.009	Stormwater	Amend	Notes that differing terminology used by different groups in different regions makes national comparison of environmental performance difficult. Taumata Arowai will define discharges based on root causes rather than weather condition (e.g. dry weather discharge and wet weather discharge) and is working to establish nationally consistent wastewater and stormwater terminology. Also noted that the National Planning Standards establish definitions local authorities must use, and that other wastewater, stormwater and drinking water terminology in the NRP have not been amended to align with the Planning Standards. Considers definitions between Taumata Arowai and GWRC should align or at a minimum, not conflict, as this could lead to reporting complications for network operators who need to provide data to both Taumata Arowai and GWRC.	Requests that terminology is aligned with that used in the NPS, WSA, and that being developed by Taumata Arowai, as possible and appropriate. Requests that consideration be given to replacing the descriptors 'dry weather discharge' and 'wet weather discharge', to instead describe wastewater network discharges based on their root cause e.g. a discharge caused by blockages, a discharge caused by plant failure or equipment damage, or a discharge being caused by capacity being exceeded in the wastewater network.
S183 Yvonne Weeber	S183.043	Stormwater	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.017	Stormwater	Support	Not stated	Not stated
S220 Rosco Ice Cream Ltd	S220.007	Stormwater	Support	Supports the definition of stormwater, in particular the exclusions. Notes a typographical error referring to rules in sections "8.2 and 9.2", which should refer to sections 8.3 and 9.3.	Correct typographical error to refer to correct sections.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S256 Waste Management NZ Limited	S256.004	Stormwater	Support	Support definition as it is consistent with the National Planning Standards.	Retain as notified.
S33 Wellington City Council	S33.014	Stormwater catchment or sub-catchment	Support	Supports the use of stormwater catchments into rivers, lakes, wetlands, springs, riparian margins, and other receiving environments	Retain as notified
S116 Taumata Arowai	S116.010	Stormwater catchment or sub-catchment	Amend	Notes that differing terminology used by different groups in different regions makes national comparison of environmental performance difficult. Taumata Arowai will define discharges based on root causes rather than weather condition (e.g. dry weather discharge and wet weather discharge) and is working to establish nationally consistent wastewater and stormwater terminology. Also noted that the National Planning Standards establish definitions local authorities must use, and that other wastewater, stormwater and drinking water terminology in the NRP have not been amended to align with the Planning Standards. Considers definitions between Taumata Arowai and GWRC should align or at a minimum, not conflict, as this could lead to reporting complications for network operators who need to provide data to both Taumata Arowai and GWRC.	Requests that terminology is aligned with that used in the NPS, WSA, and that being developed by Taumata Arowai, as possible and appropriate. Requests that consideration be given to replacing the descriptors 'dry weather discharge' and 'wet weather discharge', to instead describe wastewater network discharges based on their root cause e.g. a discharge caused by blockages, a discharge caused by plant failure or equipment damage, or a discharge being caused by capacity being exceeded in the wastewater network.
S151 Wellington Water Ltd	S151.025	Stormwater catchment or sub-catchment	Amend	Considers the definition is confusing as it is not clear whether the definition includes (or should expressly include) areas where stormwater is discharged to land or groundwater or what 'in the same vicinity' means. Questions whether reference to maps would be more effective.	Revise the definition for clarity. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

S225 Upper Hutt City Council	S225.044	Stormwater management strategy	Support	Not stated	Retain as notified
S33 Wellington City Council	S33.016	Stormwater network	Support	Considers it appropriate to consider stormwater treatment systems that serve more than one property.	Retain as notified
S116 Taumata Arowai	S116.012	Stormwater network	Amend	Notes that differing terminology used by different groups in different regions makes national comparison of environmental performance difficult. Taumata Arowai will define discharges based on root causes rather than weather condition (e.g. dry weather discharge and wet weather discharge), and is working to establish nationally consistent wastewater and stormwater terminology. Also noted that the National Planning Standards establish definitions local authorities must use, and that other wastewater, stormwater and drinking water terminology in the NRP have not been amended to align with the Planning Standards. Considers definitions between Taumata Arowai and GWRC should align or at a minimum, not conflict,	Requests that terminology is aligned with that used in the NPS, WSA, and that being developed by Taumata Arowai, as possible and appropriate. Requests that consideration be given to replacing the descriptors 'dry weather discharge' and 'wet weather discharge', to instead describe wastewater network discharges based on their root cause e.g. a discharge caused by blockages, a discharge caused by plant failure or equipment damage, or a discharge being caused by capacity being exceeded in the wastewater network.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				as this could lead to reporting complications for network operators who need to provide data to both Taumata Arowai and GWRC.	
S151 Wellington Water Ltd	S151.027	Stormwater network	Support	Supports definition.	Retain as notified Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S183 Yvonne Weeber	S183.046	Stormwater network	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.020	Stormwater network	Support	Not stated	Not stated
S225 Upper Hutt City Council	S225.045	Stormwater network	Support	Not stated	Retain as notified
S256 Waste Management NZ Limited	S256.005	Stormwater network	Amend	Notes a stormwater network is commonly understood to be that controlled by a network utility operator and not assets (such as ponds) which remain in private ownership.	Amend the definition of 'Stormwater Network' as follows: The network of devices designed to capture, detain, treat, transport and/or discharge stormwater, including but not limited to stormwater treatment systems, kerbs, intake structures, pipes, soak pits, sumps, swales and constructed ponds and wetlands, and that serves a road or more than one property. Stormwater assets which have not been vested and remain in private ownership do not form part of the stormwater network for the purposes of this definition. Any other relief or consequential amendments necessary to address the concerns set out in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S33 Wellington City Council	S33.017	Stormwater treatment system	Amend	Support the definition in principle but considers the definition allows the application to be too broad and overlapping with territorial authority provisions.	Amend so it only applies to discharge outside a local authority or state highway stormwater network.
S116 Taumata Arowai	S116.013	Stormwater treatment system	Amend	Notes that differing terminology used by different groups in different regions makes national comparison of environmental performance difficult. Taumata Arowai will define discharges based on root causes rather than weather condition (e.g. dry weather discharge and wet weather discharge), and is working to establish nationally consistent wastewater and stormwater terminology. Also noted that the National Planning Standards establish definitions local authorities must use, and that other wastewater, stormwater and drinking water terminology in the NRP have not been amended to align with the Planning Standards. Considers definitions between Taumata Arowai and GWRC should align or at a minimum, not conflict, as this could lead to reporting complications for network operators who need to provide data to both Taumata Arowai and GWRC.	Requests that terminology is aligned with that used in the NPS, WSA, and that being developed by Taumata Arowai, as possible and appropriate. Requests that consideration be given to replacing the descriptors 'dry weather discharge' and 'wet weather discharge', to instead describe wastewater network discharges based on their root cause e.g. a discharge caused by blockages, a discharge caused by plant failure or equipment damage, or a discharge being caused by capacity being exceeded in the wastewater network.
S151 Wellington Water Ltd	S151.028	Stormwater treatment system	Amend	Delete green infrastructure for clarity and refer to 'contamination in stormwater' rather than stormwater contaminants.	Delete reference to 'green infrastructure'. Refer to 'contamination in stormwater', rather than 'stormwater contaminants.' Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S183 Yvonne Weeber	S183.047	Stormwater treatment system	Support	Agree that there are a large range low impact urban design stormwater treatment systems that should be used.	Not stated
S186 Guardians of the Bays Inc	S186.021	Stormwater treatment system	Support	Not stated	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S209 Enviro NZ Services Ltd (Enviro NZ)	S209.003	Stormwater treatment system	Amend	Considers complete removal of contaminants is not always practical, depending on the contaminants, the treatment train and weather conditions.	A device, structure or system used to remove reduce stormwater contaminants and/or...
S210 Guildford Timber Company Limited, Silverstre am Forest Limited and the Goodwin Estate Trust.	S210.011	Stormwater treatment system	Support	Not stated	Seeks definition of 'stormwater treatment system' be retained as currently written.
S220 Rosco Ice Cream Ltd	S220.008	Stormwater treatment system	Support	Supports the definition of stormwater treatment system, in particular the inclusions for the use of infiltration trenches and proprietary devices are supported.	Retain as notified
S225 Upper Hutt City Council	S225.046	Stormwater treatment system	Amend	<p>Supports intent but none of items listed in this definition appear to be defined, e.g., what proprietary device would form part of the stormwater treatment system.</p> <p>Considers more flexibility and clarity if the list was not included. Also would provide clarity about whether system needs to achieve both removal of contaminants and reduce volume or only one of these.</p>	<p>Amend to read as follows:</p> <p>Stormwater treatment System</p> <p>A device, structure or system used to remove stormwater contaminants and/or to reduce stormwater volume and flows prior to discharge. These include (but are not limited to):</p> <ul style="list-style-type: none"> -rain gardens -green infrastructure -infiltration trenches -bioretention devices -vegetated swales -sand filters -green roofs -constructed wetlands -proprietary devices.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S257 Kāinga Ora	S257.008	Stormwater treatment system	Support	Supports proposed wording.	Retain notified definition
S285 Civil Contractors New Zealand	S285.010	Stormwater treatment system	Amend	Considers clarity is provided by deleting 'green infrastructure' which has no official defined meaning, and referring to 'contamination in stormwater' rather than stormwater contaminants.	Delete reference to 'green infrastructure'. Refer to 'contamination in stormwater', rather than 'stormwater contaminants.'
S183 Yvonne Weeber	S183.048	Stocking rate	Support	Not stated	Not stated
S193 Wairarapa Federated Farmers	S193.027	Stocking rate	Amend	Considered to be consistent with farm practice	Amend 'highest at any time' to read 'average' Make any consequential amendment(s) necessary to give effect to the relief sought.
S261 Forest & Bird	S261.023	Stocking rate	Support	Supports giving effect to NPS-FM provisions.	Retain as notified
S11 Lindsay Jenkin	S11.001	Stock unit	Amend	Smaller animals are not comparable to regular sized farm animals in terms of stock unit. Smaller breeds should be included as stock units in the definition through alternative weight ranges.	Amend the stock unit list to: - include the typical types of animals small block farms tend to run (list of examples provided in full submission). - Use a weight range calculation for equivalent stock units so that smaller animals can be accounted for.
S183 Yvonne Weeber	S183.049	Stock unit	Support	Not stated	Not stated
S225 Upper Hutt City Council	S225.047	Stock unit	Amend	Concerned no consistent stock unit numbers used across New Zealand. Notes importance that numbers selected have a clear basis relating to the region that justifies differences to numbers used elsewhere e.g., the Waikato Region. Considers it easier for land owners and managers if stock units were simplified to recognise these numbers will change as stock ages. Concerns it is more of an issue for smaller properties, which are likely to have more stock variability.	Seek justification for rationalisation of stock unit numbers to make this easier for landowners.

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S261 Forest & Bird	S261.024	Stock unit	Support	Supports giving effect to NPS-FM provisions.	Retain as notified
S2 Horokiwi Quarries Ltd	S2.013	Unplanned greenfield development	Amend	<p>Seeks consequential amendment to this definition to include the defined term of 'greenfield development'.</p> <p>Submission refers to submission points seeking new definitions for Greenfield Development and Urban Development.</p>	<p>Amend the definition of "unplanned greenfield development" as follows: Unplanned greenfield development Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which also require an underlying zone change (from rural/non-urban/open space to urban) though a District Plan change to enable the development. Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023.</p>
S30 Dean Spicer	S30.005	Unplanned greenfield development	Amend	<p>Considers new unplanned greenfield developments should not be prohibited as prohibition fails to consider the merits of development individually. Highlights emergence of new infrastructure which will reduce environmental impact from new developments. Considers GWRC should consider greenfield developments individually based on impacts and proposed mitigants. Strongly objects to prohibited activity status and seeks this be reviewed and amended to appropriately reflect the outcome of UHCC Plan Change 50.</p>	<p>Remove prohibited activity status and allow applications for new unplanned greenfield developments.</p>
S33 Wellington City Council	S33.018	Unplanned greenfield development	Oppose	<p>Concerns regarding the prohibitive provisions framework and if it the most appropriate to achieve the objectives and policies of the NPS-FM 2020. Concerned the policy will hinder the rezoning of land with inappropriate 'legacy' zoning, including sites that could be converted to housing, community facilities, education facilities and not expand the current urban boundary. Notes that s3.5(4) NPS-FM only sets direction for District Plans to manage urban development, not regional</p>	<p>Amend definition to take into account smaller sites within the existing urban boundary or delete definition.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				plans. Considers the prohibited activity status is not justified through the s32 report as the most appropriate option to achieve the objectives of the plan, and that a Discretionary Activity status is more appropriate.	
S37 Donald Skerman	S37.001	Unplanned greenfield development	Support	Supports additional housing through infill of existing urban areas to better capitalise on existing infrastructure, reduce transport emissions and contamination of water resources.	Supports the prohibition of unplanned greenfield development, the requirement to treat 85% of stormwater on urban development sites, and the mandatory financial fee for greenfield developments.
S38 Summers et Group Holdings Limited	S38.004	Unplanned greenfield development	Oppose	Definition relates to associated prohibited activity rules that the submitter opposes.	Delete definition: Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which also require an underlying zone change (from rural/nonurban/ open space to urban) though a District Plan change to enable the development. Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023.
S101 Wellington International Airport Limited	S101.016	Unplanned greenfield development	Oppose	Considers it is not clear what is captured by the term "greenfield development" and whether this is intended to apply to the Airport when proposing or carrying out activities as a network utility operator and regionally significant infrastructure provider. Notes concerns with respect to the provisions relating to "greenfield development" (and associated terms). For the reasons expressed in submission points on Policy WH.P2 and WH.P14, seeks activities at Wellington International Airport be exempt from this definition.	Amend the definition to exclude the Airport and/ or Network Utility Operators. Or delete and revert to Operative NRP.
S120 Akatarawa Valley Residents - John Van	S120.010	Unplanned greenfield development	Oppose	Considers terminology used in this document describing areas such as the Akatarawa valley as "Unplanned Greenfields Areas" is misrepresentative. 					(from rural/non-urban/open space to urban) though a District Plan change to enable the development. Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023.
S207 Firth Industries Limited	S207.007	Unplanned greenfield development	Oppose	<p>Scope of policies and rules for "unplanned greenfield development" is unclear as "greenfield development" is undefined. "Greenfield development" is used in proposed stormwater provisions, including a proposed prohibited activity through WH.R13 and P.R12. As per the Section 32 report, it is understood that "greenfield development" is focused on urban development but without a definition, all activities could fall under the term. Requests a definition that reflects the 'greenfield' definition in the Auckland Unitary Plan. Urban development should also be defined using the RPS definition which would support integration between the RPS and the NRP.</p>	<p>Amend the definition of "unplanned greenfield development" as follows:</p> <p>Unplanned greenfield development Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which also require an underlying zone change (from rural/non-urban/open space to urban) though a District Plan change to enable the development. Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023.</p> <p>Provide a definition of "greenfield development" as follows: Greenfield development Means any urban development undertaken within a site or sites has not been previously used for urban land use.</p> <p>As a consequential amendment, provide a definition of "urban development" to match the Regional Policy Statement definition as follows: Urban development Urban development is subdivision, use and development that is characterised by its planned reliance on reticulated services (such as water supply and drainage) by its generation of traffic, and would include activities (such as manufacturing), which are usually provided for in urban areas. It also typically has lots sizes of less than 3000 square metres.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S210 Guildford Timber Company Limited, Silverstre am Forest Limited and the Goodwin Estate Trust.	S210.012	Unplanned greenfield development	Oppose	Considers the ' Note' that includes reference to 30th October 2023 is inflexible and unnecessary and does not account for councils (such as UHCC) that may have a plan change going through the process that intends to rezone land to residential beyond that date, or for future plan changes, including the IPI UHCC plan change which was approved by Council on 23 November 2023.	Seeks deletion of unplanned greenfield development definition
S217 R P Mansell; A J Mansell, & M R Mansell	S217.003	Unplanned greenfield development	Amend Oppose	Concerned development in areas identified as unplanned greenfield development require a plan change process to enable the development. Considers the dual plan change process required under PC1 to change greenfield development from unplanned to planned should not be used as an alternative to the resource consenting process. Concerned the private plan change process will not be effective. Opposes only planned greenfield development being provided for in PC1 and unplanned greenfield development requiring a dual plan change. Considers that the prohibition of activities is contrary to the NPS-UD. Considers insufficient evidence is provided in the s32 report.	All greenfield development to be considered on their merits, and rely on provisions in the NRP and district plan zoning/provisions to manage adverse effects of greenfield development. Delete all provisions referencing "unplanned greenfield development". Delete definition for "unplanned greenfield development"
S219 Cuttriss Consultan ts Ltd	S219.008	Unplanned greenfield development	Oppose	Opposes the proposed prohibited activity rules. Considers the current provisions would make rezoning more costly, and take longer as they would require a plan change to a District Plan and the Natural Resource Plan. Considers that in some instances resource consent is more appropriate than	Requests the deletion of this definition and all subsequent references to unplanned greenfield development. Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which also require an underlying zone change (from rural/nonurban/ open space to urban) through a District Plan change to enable the development. Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October

S33 Wellington City Council	S33.019	Wastewater network catchment or sub-catchment	Support	Consistent with Wellington Water definition.	Retain as notified
S105 Hannah Bridget Gray (No2) Trust	S105.006	Wastewater network catchment or sub-catchment	Amend	Supports Porirua City Council's submission point on this provision.	Amend the definition in line with the Porirua City Council's submission point on this provision.
S116 Taumata Arowai	S116.014	Wastewater network catchment or sub-catchment	Amend	Notes that differing terminology used by different groups in different regions makes national comparison of environmental performance difficult. Taumata Arowai will define discharges based on root causes rather than weather condition (e.g. dry weather discharge and wet weather discharge), and is working to establish nationally consistent wastewater and stormwater terminology. Also noted that the National Planning Standards establish definitions local authorities must use, and that other wastewater, stormwater and drinking water terminology in the NRP have not been amended to align with the Planning Standards. Considers definitions between Taumata Arowai and GWRC should align or at a minimum, not conflict, as this could lead to reporting complications for network operators who need to provide data to both Taumata Arowai and GWRC.	Requests that terminology is aligned with that used in the NPS, WSA, and that being developed by Taumata Arowai, as possible and appropriate. Requests that consideration be given to replacing the descriptors 'dry weather discharge' and 'wet weather discharge', to instead describe wastewater network discharges based on their root cause e.g. a discharge caused by blockages, a discharge caused by plant failure or equipment damage, or a discharge being caused by capacity being exceeded in the wastewater network.
S151 Wellington Water Ltd	S151.029	Wastewater network catchment or sub-catchment	Support	Supports definition.	Retain as notified Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S183 Yvonne Weeber	S183.052	Wastewater network catchment or sub-catchment	Support	Not stated	Not stated
S240 Porirua City Council	S240.015	Wastewater network catchment or sub-catchment	Amend	Unclear if definition is intended to capture the wastewater network that exists on private land, including sewer laterals (assumes not)	Amend definition as follows: The wastewater pipes, pumpstations, storage tanks, manholes and associated devices located upstream of or prior to a wastewater treatment plant in public ownership . A wastewater network catchment may be split into a number of sub-catchments.
S33 Wellington City Council	S33.020	Wet weather overflows	Support	Consistent with Wellington Water definition.	Retain as notified
S116 Taumata Arowai	S116.015	Wet weather overflows	Amend	Notes that differing terminology used by different groups in different regions makes national comparison of environmental performance difficult. Taumata Arowai will define discharges based on root causes rather than weather condition (e.g. dry weather discharge and wet weather discharge), and is working to establish nationally consistent wastewater and stormwater terminology. Also noted that the National Planning Standards establish definitions local authorities must use, and that other wastewater, stormwater and drinking water terminology in the NRP have not been amended to align with the Planning Standards. Considers definitions between Taumata Arowai and GWRC should align or at a minimum, not conflict, as this could lead to reporting complications for network operators who need to provide data to both Taumata Arowai and GWRC.	Requests that terminology is aligned with that used in the NPS, WSA, and that being developed by Taumata Arowai, as possible and appropriate. Requests that consideration be given to replacing the descriptors 'dry weather discharge' and 'wet weather discharge', to instead describe wastewater network discharges based on their root cause e.g. a discharge caused by blockages, a discharge caused by plant failure or equipment damage, or a discharge being caused by capacity being exceeded in the wastewater network.
S151 Wellington	S151.030	Wet weather overflows	Amend	Generally supports definition, but considers the definition or the associated	Amend definition or associated rules to distinguish between private and public networks. Other relief as may be required to address the

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
n Water Ltd				rules should distinguish between private and public networks.	issues identified, including relief that is alternative, additional or consequential.
S183 Yvonne Weeber	S183.053	Wet weather overflows	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.022	Wet weather overflows	Support	Not stated	Not stated
S285 Civil Contractors New Zealand	S285.011	Wet weather overflows	Amend	Generally supports definition but suggests either the definition or the associated rules should distinguish between private and public networks.	Amend this definition or associated rules to distinguish between private and public networks.
S17 John Easter	S17.007	Whaitua	Amend	Considers the Makara/Ohariu catchments are isolated from the adjoining Wellington urban catchments and cannot be managed as an integrated system.	Create a separate Whaitua for the Makara/Ohariu catchment
S101 Wellington International Airport Limited	S101.017	Whaitua	Amend	To ensure consistent interpretation and application of the objectives, policies and rules. considers a new map be should be included which clearly delineates the boundaries of each Whaitua, including both coastal and landward areas.	Insert a new planning map which clearly delineates all of the whaitua, including both coastal and landward areas of each one.
S103 Kim Bowen	S103.003	Whaitua	Oppose	Concerned with the consultation process. Considers GWRC is not interested in genuine feedback and consultation from the affected community. Concerned the plan change will have a significant impact on farms in Makara and considers there has been minimal effort to notify the affected property owners.	Considers an improved consultation process with the community is required.
S183 Yvonne Weeber	S183.054	Whaitua	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.023	Whaitua	Support	Not stated	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

S225 Upper Hutt City Council	S225.049	Whaitua	Support	Supports implementation of Whaitua areas within NRP to align with Whaitua implementation process.	Retain definition as notified.
S183 Yvonne Weeber	S183.055	Winter Stocking rate	Support	Not stated	Not stated
S261 Forest & Bird	S261.026	Winter Stocking rate	Support	Supports giving effect to NPS-FM provisions.	Retain as notified

3 Objectives

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S17 John Easter	S17.008	Amendments to Chapter 3 - Objectives	Amend	Considers reforestation through retirement can take hundreds of years. Considers any disturbance of the stream bed yields high levels of decolouration which will exceed the generic requirements in the plan change. Considers provisions of the plan change are completely unrealistic and are not based on evidence. Considers the "reasonable timeframe" default of 2050 referred to in many objective statements is not achievable within the Makara / Owhariu whaitua. Considers revegetation of stream channels and adjacent floodplains will take many years.	Considers rural area objectives should be described as aspirational to be achieved over generations of landowners.
S246 Water New Zealand	S246.019	Amendments to Chapter 3 - Objectives	Support	Is pleased to see the amendments to Chapter 3 (Objectives) includes tables listing quantifiable measures for contact recreation, Māori customary use, aquatic ecosystem health and mahinga kai objectives. Considers including numerical values for macrophytes, periphyton, biomass, invertebrate, fish and mahinga	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				kai species in rivers, streams and lakes is a smart way of demonstrating achievement of the first priority of Te Mana o te Wai.	
S101 Wellington International Airport Limited	S101.018	Objective O2	Oppose	Considers Objective O2 is reasonably broad and gives effect to the outcomes sought in Part 2 of the RMA. Considers it is appropriate for the objective to be retained as part of the Proposed NRP. Opposes the proposed exclusion of these provisions as they relate to Whaitua Te Whanganui-a-Tara.	Retain the application of operative Objective O2 to Whaitua Te Whanganui-a-Tara (by removing the symbol).
S151 Wellington Water Ltd	S151.031	Objective O2	Oppose	Considers the benefits should be recognised regardless of the location	Retain the application of O2 in all locations. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S183 Yvonne Weeber	S183.056	Objective O2	Support	Not stated	Not stated
S193 Wairarapa Federated Farmers	S193.029	Objective O2	Not Stated	Considers Objective O2 is relevant to all whaitua	Retain for all whaitua Make any consequential amendment(s) necessary to give effect to the relief sought.
S255 Woodridge Holdings Ltd	S255.017	Objective O2	Amend	Notes the objectives refers to improving water quality. Resource consents are assessed in terms of their effects on the environment being "less than minor", "minor" or "more than minor". While positive effects can be used offset negative adverse effects and s108(10) provides for financial contributions for the purpose of ensuring positive effects on the environment to offset any adverse effect, there is no requirement for the effects of a development upon the environment to be positive.	All objectives and polies and rules should be reviewed and rewritten so that it is clear that improvements in water quality are not required but are encouraged.
S285 Civil Contracto	S285.012	Objective O2	Support	Supports Wellington Water's submission that this should be retained as these	Retain the application of O2 in all locations.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
rs New Zealand				benefits should be recognised regardless of the location	
S151 Wellington Water Ltd	S151.032	Objective O5	Oppose	Considers this is important for source protection of drinking water.	Retain the application of O5 in all locations. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S183 Yvonne Weeber	S183.057	Objective O5	Support	Not stated	Not stated
S193 Wairarapa Federated Farmers	S193.030	Objective O5	Not Stated	Considers Objective O5 is relevant to all whatua	Retain for all whatua Make any consequential amendment(s) necessary to give effect to the relief sought.
S151 Wellington Water Ltd	S151.033	Objective O6	Oppose	Considers it is important that the social, economic, cultural and environmental benefits of taking and using water are recognised when managing water, and this position is not contrary to Te Mana o te Wai. Refers to comments in Section A of submission.	Retain the application of O6 in all locations and amend as follows: The social, economic, cultural and environmental benefits of: <ul style="list-style-type: none"> • taking and using water are recognized • managing stormwater for the safety of people and property • disposing of wastewater to achieve public health outcomes are recognized and provided for when managing water. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S183 Yvonne Weeber	S183.058	Objective O6	Support	Not stated	Not stated
S193 Wairarapa Federated Farmers	S193.031	Objective O6	Not Stated	Considers Objective O6 is relevant to all whatua	Retain for all whatua Make any consequential amendment(s) necessary to give effect to the relief sought.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		Management requirements for discharge consents.			
S14 Bede Crestani	S14.002	Policy P70: Minimising effects of rural land use activities.	Amend	Concern it is not possible to economically plant small pockets of land, and conditions make planting viable only in protected areas. Concern their land would have to be retired.	Remove the need to plant or retire land if the discharge is acceptable, otherwise come up with an appropriate treatment. Seeks current discharge quality be determined before deciding on the action to maintain or improve.
S109 Mark Phillips	S109.001	Policy P70: Minimising effects of rural land use activities.	Amend	Considers that GWRC is selecting regenerating land with low stock units to control erosion rather than deforested plantation forestry blocks which is inconsistent with the Government's promotion of Pinus Radiatus. Considers that isolating erosion prone areas to stop stock movement will not prevent wild animals entering, and vegetated areas with no firebreaks are a fire risk that can damage waterways which flow into Pauatahanui Inlet. Queries whether land with one cow per 2+Ha or one family and associated infrastructure (driveway, sewage) to 2.5Ha is better for the environment. Considers that elimination should be the first option in controlling hazards, and that erodible areas should be removed down to the lowest river level of the property, to create a flat land with a gradual, controllable flow of water to Pauatahanui Inlet.	Amend plan change 1 erosion controls.
S183 Yvonne Weeber	S183.079	Policy P70: Minimising effects of rural land use activities.	Support	Not stated	Not stated

s of the Bays Inc		heating of minerals - permitted activity.			
S245 Tama Potaka, Minister of Conservation	S245.102	Rule R36: Drying and heating of minerals - permitted activity.	Support	<p>Considers there to be no functional need for this activity to occur in the coastal marine area.</p> <p>Considers the amendment gives effect to the NZCPS Policy 6(2) as the consent requirements enable the activity's location and effects on public access to be properly considered.</p>	Retain as notified
S116 Taumata Arowai	S116.017	5.1.13 Discharge of agrichemicals.	Amend	Notes that the WSA framework for identification, monitoring and management of risks to water sources is intended to work together with resource management legislation. Notes that changes are made to rules that recognise proximity to source water intakes but that no change has been made to the reference to drinking water supplies (community drinking water supply and group drinking water supply) and these references are out of date due to the repeal of the Health (Drinking Water Amendment Act) 2007 and enactment of the WSA.	Amend provisions as appropriate to reflect legislative changes to what constitutes a drinking water supply.
S227 New Zealand Agrichemical Education Trust (NZAET)	S227.004	5.1.13 Discharge of agrichemicals.	Amend	<p>Considers that requiring exact compliance with label conditions is restrictive for commercial agrichemical users.</p> <p>Notes the New Zealand Standard for the Management of Agrichemicals, and that requirements have, through the Standards NZ process, been confirmed as reasonable minimum requirements for agrichemical use in workplaces but they retain flexibility for off-label use where it is appropriate.</p>	<p>Replace 5.1.13 (e) with the following and move out of General Conditions and into R38:</p> <p>the discharge shall be undertaken in accordance with the good practice requirements set out in NZS 8409:2021 Section 5.2.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S183 Yvonne Weeber	S183.127	General conditions for the discharge of agrichemicals.	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.073	General conditions for the discharge of agrichemicals.	Support	Not stated	Not stated
S227 New Zealand Agrichemical Education Trust (NZAET)	S227.001	General conditions for the discharge of agrichemicals.	Amend	Notes only agrichemicals with hazardous properties are approved by the EPA and this rule effectively makes non-hazardous agrichemicals not permitted in the region. Notes that non-hazardous substances are already covered under the HSNO Act and associated EPA notices.	Delete "(d) the agrichemical is approved by the Environmental Protection Agency"
S227 New Zealand Agrichemical Education Trust (NZAET)	S227.002	General conditions for the discharge of agrichemicals.	Amend	Notes that 5.1.13 (e) requires the user to follow the label but there are multiple situations where users of agrichemicals may not follow the label including crops where the product has not been formally approved. Considers it is reasonable to limit the application to the label requirements for domestic users of agrichemicals.	Move clause (e) to amended R37 to make it a requirement for domestic users of agrichemicals only. Add an equivalent statement to R38 - see separate submission point.
S245 Tama Potaka, Minister of Conservation	S245.080	General conditions for the discharge of agrichemicals.	Support	Considers this amendment protects the public from noxious, dangerous, offensive, and objectionable effects in the coastal marine area by applying the same level of protection that already exists on land.	Retain as notified
S261 Forest & Bird	S261.033	General conditions for the discharge of agrichemicals.	Support	Supports consistency with the NZCPS and NPSFM.	Retain as proposed.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S282 Pat van Berkel	S282.009	General conditions for the discharge of agrichemicals.	Amend	Section 5.1.13 - General conditions for discharge of agrichemicals does not have a rule number	Add a rule number to Section 5.1.13 - General conditions for discharge of agrichemicals
S183 Yvonne Weeber	S183.128	Rule R37: Handheld discharge of agrichemicals - permitted activity.	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.074	Rule R37: Handheld discharge of agrichemicals - permitted activity.	Support	Not stated	Not stated
S227 New Zealand Agrichemical Education Trust (NZAET)	S227.003	Rule R37: Handheld discharge of agrichemicals - permitted activity.	Amend	Considers that handheld application on commercial/public properties should be subject to greater oversight than proposed. Notes handheld application is not covered by requirements of R38(F) R38(G) and so no spray plan or notification is required.	Rename R37 to Handheld discharge of agrichemicals on a residential property
S245 Tama Potaka, Minister of Conservation	S245.103	Rule R37: Handheld discharge of agrichemicals - permitted activity.	Support	Considers there to be no functional need for this activity to occur in the coastal marine area. Considers the amendment gives effect to the NZCPS Policy 6(2) as the consent requirements enable the activity's location and effects on public access to be properly considered.	Retain as notified
S183 Yvonne Weeber	S183.129	Rule R38: Motorised and aerial discharge of agrichemicals - permitted activity.	Support	Not stated	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

5.4 Beds of lakes and rivers

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S18 PF Olsen Ltd	S18.013	5.4.4 Uses of beds of lakes and rivers general conditions.	Amend	Concerned with financial implications of (n) for forestry activities, noting that the s32 report states that economic impact will be low to moderate. States that the NES-CF has not been considered, namely with management plan requirements.	Amend to exclude forestry activities of compliance with the general condition (n).

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S85 Rangitāne o Wairarapa	S85.003	5.4.4 Uses of beds of lakes and rivers general conditions.	Amend	Supports proposed changes to beds of lakes and rivers rules to improve clarity. Concerned sites of significance to mana whenua not identified in Schedule C will not be protected.	Amend to include requirement to consult with tangata whenua for activities in the beds of lakes and rivers.
S113 Zealandia Te Māra a Tāne	S113.003	5.4.4 Uses of beds of lakes and rivers general conditions.	Support	Supports the protection of beds of lakes and rivers, with specific considerations for the protection of inanga.	Not stated
S177 Transpower New Zealand Limited	S177.016	5.4.4 Uses of beds of lakes and rivers general conditions.	Amend	Seeks reference to NESETA to highlight to plan users and assist with plan interpretation. Considers it relevant given the potential difference in standards and activity status.	Insert the following to the Interpretation section of the chapter: Many activities relating to the operation, maintenance, upgrading, relocation or removal of an electricity transmission line and ancillary structures that existed prior to 14 January 2010 are controlled by the Resource Management (National Environmental Standards for Electricity Transmission Activities) Regulations 2009 (NESETA), separate to this Plan. Where the provisions of this Plan conflict with the requirements of the NESETA, the provisions of the NESETA apply.
S188 Wellington Fish and Game Regional Council	S188.022	5.4.4 Uses of beds of lakes and rivers general conditions.	Support	Not stated	Not stated
S246 Water New Zealand	S246.024	5.4.4 Uses of beds of lakes and rivers general conditions.	Amend	Questions whether this should be re-written to allow ponding above an intake and encourage a making room for rivers approach. Notes such an approach is only encouraged where appropriate and doesn't increase flood inundation risk to people, property or infrastructure. Considers making room for water allows land to flood safely, while providing a range of benefits such as aquatic and riparian habitat, wetland restoration, carbon sequestration and increased	Amend to allow ponding above an intake and encourage a making room for rivers approach.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				groundwater recharge. It also offers to restore mana whenua connections with their local water. Where streams, wetland and floodplain remain in natural state, they should be prioritised for protection and providing natural hazard mitigation.	
S151 Wellington Water Ltd	S151.047	Beds of lakes and rivers general conditions.	Amend	Supports the protection of native bird species habitat and the outcome general condition 5.4.4(n) seeks to achieve but is concerned the proposed amendment would require an ecologist to determine when the named birds are roosting, nesting, or foraging and this work would take significant time which has the potential for adverse effects on the environment while this work is underway. Considers there needs to be more certainty to plan users as to when works can occur, and when they cannot, and less reliance on a third party to confirm if a condition can be met.	Provide more certainty to plan users in general condition (n) so that a third party is not required to assess when named birds are identified as nesting, roosting and foraging, at the work site. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S183 Yvonne Weeber	S183.157	Beds of lakes and rivers general conditions.	Neutral	Not stated	Not stated
S225 Upper Hutt City Council	S225.050	Beds of lakes and rivers general conditions.	Oppose	Concerned with significant change to activities in (n). Amended wording implies that at no point are works able to be undertaken if identified birds are roosting and nesting even outside the critical period. Notes there are some birds which may nest year-round, on potentially significant infrastructure such as bridges which require maintenance.	Retain as operative, do not amend as proposed.
S261 Forest & Bird	S261.034	Beds of lakes and rivers general conditions.	Support	Supports greater clarity.	Retain as proposed.
S285 Civil Contractor	S285.013	Beds of lakes and rivers	Amend	Considers urgent works may not be able to wait for an ecologists assessment and	Provide more certainty to plan users in general condition (n) so that a third party is not required to

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
s New Zealand		general conditions.		clause (n) may lead to poor environmental outcomes.	assess when named birds are identified as nesting, roosting and foraging, at the work site.
S202 Graeme Iain Shellard , Sarah Elizabeth Shellard, Cameron Anthony Shellard, Finlay David Shellard Graeme Shellard	S202.006	5.4.5 Uses of beds of lakes and rivers.	Oppose	Consider this unnecessarily limiting to prevent scouring increasing and there are many situations where planting is not appropriate. Notes gabions and concrete blocks are used throughout the Hutt and Mangaroa valley since in many situations they are appropriate.	Reinstate the use of erosion protection structures.
S2 Horokiwi Quarries Ltd	S2.014	Rule R128: New structures - permitted activity.	Oppose	Considers the removal of the reference to "structure" from the chapeau of the rule significantly reduces the range of structures that are permitted under the rule. States this change removes the ability to construct minor structures within the bed of a river without the need for resource consent and will make the following permitted structures a discretionary activity under R145: <ul style="list-style-type: none"> - Intake structures, - Outfall structures, - Weirs (excluding those used for sediment retention) - Fish screens, - Fish passage devices, - Navigational aid structure, and - temporary structures. Considers the existing rule appropriately provides for minor structures (less than 10 m2) through permitted conditions limiting the size of a structure. Considers the	Changes are rejected and Rule R128 is retained as operative

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>requirement to seek resource consent for the above activities is onerous, will result in unnecessary consenting costs, and is not efficient or effective.</p> <p>Considers this matter would be addressed by reinstating the words "structure, including" to the chapeau of the rule. States the Section 32 evaluation provided little explanation for the proposed change, other than the rule providing for a broad range of structures is inappropriate. States there is no acknowledgment of the efficiency of requiring resource consent for all minor structures that are no longer permitted.</p>	
S151 Wellington Water Ltd	S151.048	Rule R128: New structures - permitted activity.	Amend	Notes the inclusion of 'pipeline' removes 'pipes' from this Rule, as they have different dictionary definitions. Considers pipes have lesser effects than pipelines and should be specifically mentioned.	Amend to refer to both pipes and pipelines Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S177 Transpower New Zealand Limited	S177.017	Rule R128: New structures - permitted activity.	Amend	<p>Considers removal of reference to "structure" from chapeau significantly reduces range of structures permitted and it is unclear whether National Grid transmission lines traversing rivers or lakes will be permitted under rule. Considers reference to "cable" in rule is not sufficient to provide for National Grid, as National Grid cables are generally transmission lines located below ground (not those lines above ground). Seeks either the reference to "new structure" in chapeau is retained, or specific reference to National Grid transmission lines is provided for in rule, wherever the term "cable" is mentioned. Alternatively, considers matter would be addressed by reinstating words "structure, including" to chapeau of rule.</p>	<p>Reinstating the words "structure, including" to the chapeau of the rule.</p> <p>Alternatively, amend the rule as follows:</p> <p>Rule R128: New structures - permitted activity</p> <p>The placement of a new structure, including sediment retention weirs, pipelines (such as a natural gas pipeline), ducts, cables, National Grid transmission line, hydrological and water quality monitoring equipment, fences, erosion protection structures, debris arrestor structures or a and structures associated with vegetative bank edge protection except a structure permitted by Rules R125, R126 and R127 and passive flap-gates, that is fixed in, on, under, or over the bed of any river or lake, excluding activities regulated by the Resource Management (National Environmental Standards for</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Notes minor error in chapeau, where "structure associated with vegetative bank edge protection" should be amended to refer to structure in singular (rather than plural).</p>	<p>Plantation Forestry) Regulations 2017 except general condition 5.4.4(n); including any associated:</p> <ul style="list-style-type: none"> (a) disturbance of the river or lake bed, and (b) deposition on the river or lake bed, and (c) diversion of water, and (d) discharge of sediment to water, and (e) temporary damming of water, <p>excluding activities regulated by the Resource Management (National Environmental Standards for Plantation Forestry) Regulations 2017 except when general condition 5.4.4(n) applies,</p> <p>is a permitted activity, provided the following conditions are met:</p> <ul style="list-style-type: none"> (f) the activity shall comply with the beds of lakes and rivers general conditions specified above in Section 5.4.4, and (g) the activity does not occur within a site identified in Schedule C (mana whenua), excluding adding pipelines, or cables, or National Grid transmission lines to an existing structure or providing for fish refuge, and (h) the activity does not occur in or on any part of the river bed identified as inanga spawning habitat in Schedule F1 (rivers/lakes), and (i) the structure does not occupy a bed area any greater than 10m², except for where the structure is associated with vegetative bank edge protection, or a pipeline, duct, fence, or cable, or National Grid transmission line which is located over or under the bed where no bed occupancy limits apply, and (j) the catchment upstream of any sediment retention weir is not greater than 200ha, and (k) the height of any sediment retention weir from the upstream base to the crest of the weir at the time of construction shall be no more than 0.5m, and (l) the placement of a weir other than a customary weir, in, on over or under the bed of any river or connected area must also comply with the following:

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					<p>(i) the fall height of the weir must be no more than 0.5m, and</p> <p>(ii) the slope of the weir must be no steeper than 1:30, and</p> <p>(iii) the face of the weir must have roughness elements that are mixed grade rocks of 150 to 200mm diameter and irregularly spaced no more than 90mm apart to create a hydraulically diverse flow structure across the weir (including any wetted margins), and</p> <p>(iv) the weir's lateral profile must be V-shaped, sloping up at the banks, and with a low-flow channel in the centre, with the lateral cross-section slope between 5° and 10°, and</p> <p>(m) for all new weirs (except customary weirs), non-passive flap gates, aprons and ramps, placed in rivers or connected areas, the information requirements of Regulations 62, 64, 65, and 68 as relevant for the structure, of the Resource Management (National Environmental Standards for Freshwater) Regulations 2020 shall be provided as set out in the regulations.</p> <p>Note The placement of a passive flap gate in, on, over or under the bed of any river or connected area is a non-complying activity regulated by the Resource Management (National Environmental Standards for Freshwater) Regulations 2020.</p>
S183 Yvonne Weeber	S183.158	Rule R128: New structures - permitted activity.	Neutral	Not stated	Not stated
S193 Wairarapa Federated Farmers	S193.045	Rule R128: New structures - permitted activity.	Amend	Amend for clarity and certainty as per pNRP mediated agreement	<p>Amend as follows: Retain "except a structure permitted by rules R125, R126 and R127"</p> <p>Make any consequential amendment(s) necessary to give effect to the relief sought.</p>
S206 Winstone	S206.030	Rule R128: New structures	Oppose	Considers the proposed change will remove the ability to construct minor structures within the bed of a river without	Changes are rejected and Rule R128 is retained as operative.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Aggregates		- permitted activity.		the need for resource consent, noting examples of structures that would be come discretionary activities. Notes the existing rule provides for minor structures (less than 10m ²) and considers discretionary activity status for such structures onerous. Considers insufficient explanation is provided for the change in the s32 evaluation.	
S220 Rosco Ice Cream Ltd	S220.009	Rule R128: New structures - permitted activity.	Oppose	Notes Rule R128 was originally promulgated to reduce the need to obtain permits for minor structures needed in the bed of a watercourse/lake provided the works met the general standards. Opposes the changes as they reduce the scope of activities that would be permitted.	Retain the operative rule R128.
S222 Environmental Defence Society Inc.	S222.013	Rule R128: New structures - permitted activity.	Amend	To give effect to Policies 7 and 9 NPSFM and Policy 30 NRP.	Ensure that activities avoid the loss of river extent and values and that the habitats of indigenous species are protected. Introduce TASs for habitat, natural form and character which activities must achieve.
S261 Forest & Bird	S261.035	Rule R128: New structures - permitted activity.	Amend	Supports the exclusion of "erosion protection structures", however, notes the provision for "debris arrestor structures" and "structures associated with vegetative edge protection" up to 10m ² can alter the natural character and habitat of rivers. Considers this frustrates the ability to achieve outcomes of NPSFM Policy 7 and 9; and NRP Policy 30.	Remove permitted status for "debris arrestor structures" and "structures associated with vegetative edge protection" to ensure these activities are managed in a way that maintains and restores physical habitat in riverbeds and natural form and character. Introduce a condition of the rule (in the general conditions) that requires compliance with Target Attribute States. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S285 Civil Contractors New Zealand	S285.014	Rule R128: New structures - permitted activity.	Amend	Notes that inclusion of 'pipeline' excludes 'pipes' from this Rule as they have different dictionary definitions. Considers that pipes should be specifically mentioned.	Refer to both pipes and pipelines.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S183 Yvonne Weeber	S183.159	Rule R132: Minor sand and gravel extraction - permitted activity.	Neutral	Not stated	Not stated
S261 Forest & Bird	S261.036	Rule R132: Minor sand and gravel extraction - permitted activity.	Amend	Notes compliance with target attribute states is required to give effect to NPSFM Policy 7 and 9; the requirement to manage water bodies to achieve all five components of ecosystem health; and NRP Policy 30.	Amend general conditions in accordance with relief sought for Rule R128. Include target states for habitat and natural form and character. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S43 Fulton Hogan Ltd	S43.005	Rule R133: Gravel extraction for flood protection purposes or erosion mitigation inside sites of significance - discretionary activity.	Amend	Seeks to change the activity status from discretionary to restricted discretionary to recognise the benefits of gravel extraction for flood management.	Change the activity status to restricted discretionary
S113 Zealandia Te Māra a Tāne	S113.004	Rule R133: Gravel extraction for flood protection purposes or erosion mitigation inside sites of significance - discretionary activity.	Amend	Considers the Kaiwharawhara estuary may benefit from the installation of planter boxes alongside concrete walls as this would enhance inanga spawning habitat, provide flow variation alongside the stream and have overall positive environmental outcomes.	Amend rule to consider hard infrastructural improvements required to dechannelise river banks.
S183 Yvonne Weeber	S183.160	Rule R133: Gravel extraction for flood protection	Neutral	Not stated	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

		purposes or erosion mitigation inside sites of significance - discretionary activity.			
S193 Wairarapa Federated Farmers	S193.046	Rule R133: Gravel extraction for flood protection purposes or erosion mitigation inside sites of significance - discretionary activity.	Amend	Considers effects can be managed through conditions on a controlled activity	Provide for gravel extraction in Schedule F1 rivers as a controlled activity Make any consequential amendment(s) necessary to give effect to the relief sought.
S222 Environmental Defence Society Inc.	S222.014	Rule R133: Gravel extraction for flood protection purposes or erosion mitigation inside sites of significance - discretionary activity.	Amend	To give effect to NPSFM.	Include Schedules A1 - A3 in Rule R133 so that activities inside a scheduled area require discretionary consent.
S261 Forest & Bird	S261.037	Rule R133: Gravel extraction for flood protection purposes or erosion mitigation inside sites of significance - discretionary activity.	Amend	Considers the discretion provided by the rule should be provided to other water bodies, particularly Outstanding Waterbodies, to ensure consistency with NPSFM Policy 7 and 9; and NRP Policy 30.	Include Schedule A1, A2, and A3 in R133 as areas where excavation, deposition, or disturbance are discretionary activities. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S85 Rangitāne o Wairarapa	S85.008	Rule R145: All other uses of river and lake beds - discretionary activity.	Amend	Supports proposed changes to beds of lakes and rivers rules to improve clarity. Concerned sites of significance to mana whenua not identified in Schedule C will not be protected.	Amend to include requirement to consult with tangata whenua for activities in the beds of lakes and rivers.
S183 Yvonne Weeber	S183.161	Rule R145: All other uses of river and lake beds - discretionary activity.	Neutral	Not stated	Not stated
S261 Forest & Bird	S261.038	Rule R145: All other uses of river and lake beds - discretionary activity.	Amend	Considers prohibited activity status provides most certainty to achieve the policy direction of the NPSFM and RMA, including protection of fish passage.	Remove the word "note". Make placement of passive gates prohibited (i.e., strengthen rule beyond NES minimum). Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S22 Lynn Cadenhead	S22.018	5.4.8 Damming and diverting water	Amend	Considers issues around fish passage are not addressed (Rule R151A). Seeks for discretion to be available to require fish passage for activities which have existed for 10 years or more, where practical.	Enable discretion to require fish passage where practical.
S29 Neil Deans	S29.005	5.4.8 Damming and diverting water	Amend	Considers issues around fish passage are not addressed (Rule R151A). Seeks for discretion to be available to require fish passage for activities which have existed for 10 years or more, where practical.	Enable discretion to require fish passage where practical.
S85 Rangitāne o Wairarapa	S85.001	5.4.8 Damming and diverting water	Oppose	Considers long term consents for permanent diversion allows for review of the consent and effects, including consultation with mana whenua and other parties to ensure the diversion remains appropriate.	Delete proposed rule.
S2 Horokiwi Quarries Ltd	S2.015	Rule R151A: Ongoing diversion of a river -	Support	Supports the inclusion of this rule which will negate the requirement for long term river diversions where that diversion is permanent.	Retain as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		permitted activity.			
S43 Fulton Hogan Ltd	S43.006	Rule R151A: Ongoing diversion of a river - permitted activity.	Support	Supports lawfully established activities as a permitted activity	Retain as notified
S151 Wellington Water Ltd	S151.049	Rule R151A: Ongoing diversion of a river - permitted activity.	Support	Supports the rule, specifically the approach that the ongoing diversion can only be considered permitted if all of the conditions of the resource consent to lawfully establish the diversion have been complied with.	Retain as notified. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S176 Te Awarua o Porirua Harbour and Catchment s Communit y Trust & Guardians of Pāuatahan ui Inlet	S176.007	Rule R151A: Ongoing diversion of a river - permitted activity.	Amend	Considers Rule 5.4.8 should be a discretionary activity to provide fish passage over artificial barriers such as dams even for those that have existed for 10 years or more - rather than reverting to permitted activity status. Considers if these are consented using permitted activity status, this will authorise a past decision which leaves a negative legacy and does not address the issues around fish passage that remain.	Make Rule R151A a discretionary activity
S183 Yvonne Weeber	S183.162	Rule R151A: Ongoing diversion of a river - permitted activity.	Neutral	Not stated	Not stated
S188 Wellington Fish and Game Regional Council	S188.023	Rule R151A: Ongoing diversion of a river - permitted activity.	Oppose	Concerns permitted activity status for permanent diversions over 10 years risks resulting in inappropriate structures creating potential adverse effects to waterbody flow, form, and character, as well as potential fish passage issues,	Retain river diversions as discretionary or restricted activities to allow for uptake of new river management systems, ideas, and materials as knowledge and technologies progress.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				which are contrary to Te Mana o te Wai, NPS-FM, and RMA.	
S206 Winstone Aggregate s	S206.031	Rule R151A: Ongoing diversion of a river - permitted activity.	Support	Supports the rule as it will negate the requirement for long term river diversions where they are permanent.	Retain as notified
S255 Woodridge Holdings Ltd	S255.019	Rule R151A: Ongoing diversion of a river - permitted activity.	Amend	Considers the rule is overly complicated and does not see the reason for differentiating between existing diversions associated with a structure and existing diversions which do not include structures, or the need to differentiate between diversions consented before or after PC1 became operative. Seeks for clause (a) the words "as at the date of this rule becoming operative" should be deleted, and a specific date inserted as the date at which the rule becomes operative will be harder to determine as time progresses. This change should be made where ever this or a similar reference is used.	Rule R151A: Ongoing diversion of a river - permitted activity An existing permanent diversion, that was lawfully established by way of a resource consent is a permitted activity [provided] all of the conditions of the resource consent which lawfully established the diversion have been complied with. Delete all use of the words "as at the date of this rule becoming operative" in PC1 and insert a specific date.
S261 Forest & Bird	S261.039	Rule R151A: Ongoing diversion of a river - permitted activity.	Oppose	Considers the rule enables an established diversion to continue indefinitely, regardless of size or effects. Considers such diversion should be subject to assessments and consenting to manage effects on natural form, character and health; ecosystem health; and Te Mana o te Wai. Considers permitted activity status inappropriate and that greater scope is required to manage potential ongoing effects.	Make a discretionary activity. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

5.5 Water allocation rules

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S85 Rangitāne o Wairarapa	S85.004	Rule R128: New structures - permitted activity.	Amend	Supports proposed changes to beds of lakes and rivers rules to improve clarity. Concerned sites of significance to mana whenua not identified in Schedule C will not be protected.	Amend to include requirement to consult with tangata whenua for activities in the beds of lakes and rivers.
S288 China Forest Group Company New Zealand Ltd	S288.032	Rule R128: New structures - permitted activity.	Amend	Considers there is misalignment with the NES-CF.	Amend to: has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Commercial Forestry Regulations 2023).
S85 Rangitāne o Wairarapa	S85.005	Rule R132: Minor sand and gravel extraction - permitted activity.	Amend	Supports proposed changes to beds of lakes and rivers rules to improve clarity. Concerned sites of significance to mana whenua not identified in Schedule C will not be protected.	Amend to include requirement to consult with tangata whenua for activities in the beds of lakes and rivers.
S37 Donald Skerman	S37.002	Rule R133: Gravel extraction for flood protection purposes or erosion mitigation inside sites of significance - discretionary activity.	Support	Disturbances to the riverbed should be minimised to reduce sediment, and work should be limited around periods where recreational use is most likely. The public should be notified when water is unsuitable for swimming due to these activities..	Retain as notified
S85 Rangitāne o Wairarapa	S85.006	Rule R133: Gravel extraction for flood protection purposes or erosion	Amend	Supports proposed changes to beds of lakes and rivers rules to improve clarity. Concerned sites of significance to mana whenua not identified in Schedule C will not be protected.	Amend to include requirement to consult with tangata whenua for activities in the beds of lakes and rivers.

6 Other methods

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S22 Lynn Cadenhead	S22.019	6.16 Freshwater Action Plan programme	Support	Not stated	Retain as notified
S29 Neil Deans	S29.006	6.16 Freshwater Action Plan programme	Support	No relevant comments	Retain as notified
S85 Rangitāne o Wairarapa	S85.002	6.16 Freshwater Action Plan programme	Amend	Supports partnership directives for the creation of freshwater action plans. Suggests there is a role for mana whenua to measure and understand the effectiveness of actual outcomes in either pūtaiao or mātauranga Māori (which only Tangata whenua can do).	Amend to include "in partnership with tangata whenua" in the statement around monitoring the effectiveness of the Freshwater Action Plans.
S107 Friends of Waipāhihi Karori Stream	S107.011	6.16 Freshwater Action Plan programme	Support	Supports the proposed Freshwater Action Plan programme. Seeks to be an active partner in the development of Freshwater Action Plans. Seeks more consistent and equitable resourcing for catchment groups.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S188 Wellington Fish and Game Regional Council	S188.024	6.16 Freshwater Action Plan programme	Support	Not stated	Not stated
S213 Pareraho Forest Trust	S213.002	6.16 Freshwater Action Plan programme	Support	Supports the method specifying that FAPs may be prepared with discretionary attribute states or environmental outcomes identified in partnership with mana whenua or with the community	Retain as notified
S284 Friends of Waiwhetu Stream	S284.003	6.16 Freshwater Action Plan programme	Support	Supports policies of Chapter 6.16 but concerned that proposed treatments to improve water quality are already known and the plans should be progressed more quickly than the timeframe of December 2026.	Bring forward the December 2026 timeframe
S5 Diane Strugnell	S5.002	Method M36: Freshwater Action Plan programme.	Not Stated	Considers it is important that requirement is retained for GWRC to develop Freshwater Action Plans that are informed by engagement with rural landowners as significant stakeholders. Concerned the plan has been developed through modelling rather than based on actual data. Considers data collection should be at a smaller subcatchment scale or, in the case of larger farms, at an individual farm scale.	Retain as notified.
S116 Taumata Arowai	S116.019	Method M36: Freshwater Action Plan programme.	Support	Notes managing stormwater and wastewater discharges is important to Māori. Supports acknowledgment of Māori customary practice and use of wai, the partnership role of mana whenua in developing freshwater action plans, and acknowledgment of the need to engage with mana whenua in rules for discharges of wastewater and stormwater.	Retain as notified (except as requested to be amended by mana whenua).

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S151 Wellington Water Ltd	S151.050	Method M36: Freshwater Action Plan programme.	Amend	Refers to Section A of submission	Provide clarification about interaction between local authority networks and the SMS and the matters raised in Section A of the submission. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S176 Te Awarua o Porirua Harbour and Catchments Community Trust & Guardians of Pāuatahanui Inlet	S176.004	Method M36: Freshwater Action Plan programme.	Support	Supports requirement to develop Freshwater Action Plans. Supports approach of developing Freshwater Action Plans which protect, maintain, or enhance macroinvertebrate, periphyton, and fish abundance and community attributes as necessary and where applicable, where these communities also include life stage habitat protection actions for all species. Notes need to develop Freshwater Action Plans for urban catchments.	Retain requirement for Freshwater Action Plans
S183 Yvonne Weeber	S183.168	Method M36: Freshwater Action Plan programme.	Support	Considers Method M36 to be an important initiative and the community want to be involved in the Freshwater Action Programme.	Not stated
S186 Guardians of the Bays Inc	S186.087	Method M36: Freshwater Action Plan programme.	Support	Not stated	Not stated
S193 Wairarapa Federated Farmers	S193.049	Method M36: Freshwater Action Plan programme.	Amend	Amend for consistency with NPS-FM. Considers timeframes are too ambitious to complete all by December 2027	Amend clause a) to state the following: tangata whenua, and through engagement with communities, stakeholder and territorial authorities Amend clause b) to provide for urban FMUs by December 2026 and rural FMUs by December 2028. Make any consequential amendment(s) necessary to give effect to the relief sought.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S222 Environmental Defence Society Inc.	S222.015	Method M36: Freshwater Action Plan programme.	Support	Gives effect to NPSFM.	Not stated
S225 Upper Hutt City Council	S225.051	Method M36: Freshwater Action Plan programme.	Amend	Supports intent of method but considers timeframes ambitious and may be amended noting government has indicated timescales are likely to change.	Amend as required to align with new government led direction on freshwater. Seeks a pause to consider new national direction may be prudent. Seeks that "and/or" used throughout this document be amended to clarify whether it is inclusive or not as and/or is inappropriate.
S240 Porirua City Council	S240.016	Method M36: Freshwater Action Plan programme.	Amend	Supports action plans to achieve objectives and considers action plans should be developed in partnership with territorial authorities rather than being informed by them. Working in partnership would reflect the long-term partnership approach taken under the Harbour Strategy and Action Plan between councils and Ngāti Toa. Considers the s32 evaluation of Council feedback on this point at pre-notification consultation has not addressed this concern and does not make sense, as Method M36 seeks to direct a partnership with mana whenua (submitter references paragraph 51 of Part A of the s32 report). Considers Council is a key stakeholder as a regulator, land owner and asset owner and an action plan developed in partnership with Council is more likely to be successful.	Amend the method so that territorial authorities are partners to development and delivery of action plans: Method M36: Freshwater Action Plan programme Wellington Regional Council will implement a programme to prepare, deliver, monitor and review Freshwater Action Plans for all part Freshwater Management Units identified in Schedule 27. Freshwater Action Plans will be: (a) developed in partnership with mana whenua and territorial authorities , and be informed by engagement with catchment communities, territorial authorities and stakeholders, and (b) prepared and published for all Freshwater Management Units and/or part Freshwater Management Units in the Wellington region by December 2026, and (c) prepared for all attributes identified in Schedule 27 A2. Freshwater Action Plans may also be prepared for, or incorporate, actions for any other relevant target attribute state or environmental outcome identified in partnership with mana whenua or with the community. Wellington Regional Council, in partnership with mana whenua and territorial authorities , and informed by engagement with catchment communities, territorial authorities and stakeholders, may make changes or

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					additions to any Freshwater Action Plan, at any time, for the purpose of achieving the target attribute states and/or environmental outcomes set in this Plan.
S245 Tama Potaka, Minister of Conservation	S245.071	Method M36: Freshwater Action Plan programme.	Amend	Considers other statutory bodies such as Fish and Game and the Department of Conservation have a role in freshwater.	Requests the wording Statutory bodies be added to (a)
S246 Water New Zealand	S246.025	Method M36: Freshwater Action Plan programme.	Support	Welcomes that FAP must recognise the value and necessity of integrated management planning and delivery but suggest it is unfortunate that the first iteration of Freshwater Action Plans, to cover all rivers and lakes in the Whaitua Te Whanganui-a-Tara, will only be completed by December 2026.	Adopt the process Northland Regional and Auckland Councils have taken to include costed actions plan programmes in the consultation documents for the Long-term Plan process. Amend the FAP Necessary action 4 (a) to include Ministers for Building Innovation and Employment to promote source control for copper and zinc from buildings.
S246 Water New Zealand	S246.039	Method M36: Freshwater Action Plan programme.	Support	Supports in terms of giving effect to Te Mana o te Wai, notes an error in the numbering, and believes this clause 6.16 should be 6.18.	Not stated
S255 Woodridge Holdings Ltd	S255.020	Method M36: Freshwater Action Plan programme.	Oppose	Considers that FAPs should be developed by WRC in consultation with all stakeholders. Concerned the method gives Council the ability to amend the FAP without formal consultation with the relevant community and considers formal consultation with all stakeholders, the catchment community and TA should be compulsory before any changes are made to a FAP.	Amend this and all other methods so that FAPs cannot be developed or amended without formal engagement of the relevant stakeholders, including relevant landowners, catchment communities and TAs.
S261 Forest & Bird	S261.040	Method M36: Freshwater Action Plan programme.	Support	Supports consistency with NPSFM.	Retain as proposed. Note relief sought for Schedule 27 A2.
S286 Taranaki Whānui	S286.010	Method M36: Freshwater Action Plan programme.	Support	Supports action plans to achieve objectives	Retain as notified.

S288 China Forest Group Company New Zealand Ltd	S288.035	Method M41: Identifying and responding to degradation in freshwater bodies within Whaitua Te Whanganui-a- Tara and Te Awarua-o-	Amend	Considers the text, purpose and execution unclear. Supports publishing of trends provided monitoring is sufficient. Considers the identification of the trend of degradation as "not being natural" is mis-scoped. Considers the purpose should be identification of trend(s) related to TAS that are negatively divergent from the Whaitua action plans. Considers prior to introducing a plan	Review and rewrite.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		Porirua Whaitua.		change, any response should involve reviewing the plan TAS for applicability, reliability of data, the degree to which current regulation has spurred changes in practices, and any other influences on efficacy.	
S196 Sera Moran	S196.003	6.17 Small farm property registration	Oppose	Concerned with requirement for small farms to be registered and to provide complex information. Considers large animals/livestock welfare should remain under MPI not GWRC.	Delete the requirement for farms of 4 ha to register with GWRC.
S273 Robert Pavis-Hall, Gaynor Rowswell, Katie Norman, Megan Norman	S273.009	6.17 Small farm property registration	Oppose	Does not consider small farms an accurate description of the majority of 4 ha blocks that may have little or no pasture. Feel GWRC have taken the concept of farms to the extreme.	Delete the requirement for "Farms" of 50ha or less to register with GWRC.
S9 Louise Askin	S9.008	Method M42: Small farm property registration within Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.	Amend	Considers it is unclear why this is listed as a key method when the design of associated policies and rules appear to have low impact. Considers this will have high compliance costs with low outcomes.	Clarify the scope and purpose of this method and either strengthen or remove. Oppose if there is no appropriate benefit from this process shown.
S17 John Easter	S17.012	Method M42: Small farm property registration within Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.	Amend	The points in the attached document have been listed as new submission points by GWRC at the beginning of this submission.	Make council responsible for the preparation and registration of small farms plans in consultation with the property owner.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S58 David and Carolyn Gratton	S58.006	Method M42: Small farm property registration within Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.	Oppose	Concerns with the additional cost of small farm registration	Remove requirement for small farm registration
S114 Michael Marfell-Jones	S114.004	Method M42: Small farm property registration within Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.	Oppose	Does not support the prescribed information requirements, on the basis that it is too complex for laypeople to record.	Delete the requirement for farms of 4 ha to register with GWRC.
S183 Yvonne Weeber	S183.174	Method M42: Small farm property registration within Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.	Support	Not stated	Not stated
S193 Wairarapa Federated Farmers	S193.014	Method M42: Small farm property registration within Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.	Oppose	<p>Opposes Method M42 as there is no sound evidence that there is any issue with nutrient losses from small farms, or that the recommended policies and rules are necessary.</p> <p>Considers registration requirements and assessments of N loss will create an administrative burden for small property holders and the Council. Considers any consent requirements resulting from a</p>	Delete

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>failure to comply with assessment requirement will have associated costs for landowners and burden for the Council, for little or no environmental benefit. Notes the quality of data from the annual assessments may be low, and have limited use, without a full range of relevant input data and interpretation.</p> <p>Considers N loss management to be unnecessary as nitrogen is not a significant problem in the region's freshwater bodies. Notes the Council's own attribute state baselines show that river and stream surface water bodies are almost all within the NOF 'A' Band for nitrate and ammonia toxicity under the NPS-FM with a small number of sites in the 'B' Band and lakes in the 'B' and 'C' Bands. States there are no freshwater bodies in rural areas with attribute states in the 'D' or 'E' Bands for nitrogen-related attributes.</p> <p>Opposes the requirement for all small farms between 4ha and 20 ha to register with the Council, and to prepare an annual nitrogen risk loss assessment. Considers these requirements provide no environmental benefit, are an unnecessary burden for small block owners, and provide little or no meaningful data for the Council.</p>	
S205 Kelly & Lewis Few-Mackay	S205.005	Method M42: Small farm property registration within Whaitua Te Whanganui-a-Tara and Te	Not Stated	Concerned the registration process requires landowners to provide complex data such as average stocking rates, calculating effective grazing areas, map property boundaries and showing waterbodies where stock exclusion fencing is required under new rules.	Amend: Adopt suitable systems and support to collate and assist the information required.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		Awarua-o-Porirua Whaitua.		Considers whilst it seems to be a simple task, it assumes all landowners have the information readily available.	
S214 Megan Persico	S214.004	Method M42: Small farm property registration within Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.	Oppose	Considers farms under 20 hectares is a hobby and livestock welfare falls under MPI not GWRC.	Amend so that small farm registration only applies to farms greater than 20 hectares.
S218 Tim Moody	S218.002	Method M42: Small farm property registration within Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.	Oppose	Opposes the inclusion of farms between 4-20 due to the requirements placed on small lifestyle block owners and considers the proposed changes make the land incapable of reasonable use.	Exclude lifestyle blocks of circa 4 hectares, with the minimum inclusion size being 10 hectares. Ensure PC1 does not make land incapable of reasonable use.
S225 Upper Hutt City Council	S225.055	Method M42: Small farm property registration within Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.	Oppose	Concerns with unknown registration process, noting it will be too onerous for owners of small lifestyle blocks undertaking this level of assessment with limited time and financial resources.	Delete this method in its entirety and for provisions in this plan change to relate solely to farms over 20ha.
S113 Zealandia Te Māra a Tāne	S113.015	6.16 Supporting improved water quality outcomes.	Support	Supports addressing and minimising the environmental impacts of fish barriers to promote diadromous species to complete their life cycles. Supports improved water quality outcomes with specific funding allocated	Not stated

				towards stormwater and wastewater network upgrades.	
S22 Lynn Cadenhead	S22.020	Method M43: Supporting the health of urban waterbodies.	Support	Supports the health of, and funding for, urban waterbodies. Notes the benefit of endorsement by local authorities in existing and new development.	Not stated.
S29 Neil Deans	S29.007	Method M43: Supporting the health of urban waterbodies.	Support	Supports the health of, and funding for, urban waterbodies. Notes the benefit of endorsement by local authorities in existing and new development.	Not stated.
S31 Stormwater r360	S31.001	Method M43: Supporting the health of urban waterbodies.	Not Stated	<p>Suggests overseas approaches to managing stormwater discharge are examined to confirm treatment goals are achievable and monitorable, cites California and Washington examples.</p> <p>Suggests a model of individual site monitoring of stormwater discharges is used rather than blanket concentration requirements and considers defining influent vs effluent and using dissolved metals only is a more applicable way to measure treatment efficiencies than percent removal alone.</p> <p>Suggests there should be a clear process and register for any proprietary device 'deemed to comply'.</p>	Seeks that the types of approaches used in the USA be applied to NZ to ensure the best outcomes for the environment.
S33 Wellington City Council	S33.021	Method M43: Supporting the health of urban waterbodies.	Amend	Considers it appropriate to develop framework with Territorial Authorities given the District Plan manages urban activities.	Amend as follows: ... Wellington Regional Council will work with Territorial Authorities to undertake programme(s) to support the health of waterbodies, including rivers and streams, estuaries and harbours, impacted by urban activities, including to:...
S105 Hannah Bridget Gray (No2) Trust	S105.009	Method M43: Supporting the health of urban waterbodies.	Amend	Supports Porirua City Council's submission point on this provision.	Amend the definition in line with the Porirua City Council's submission point on this provision.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S116 Taumata Arowai	S116.024	Method M43: Supporting the health of urban waterbodies.	Support	Supports this proposed Method, particularly as expressed in clauses (a) and (b).	Retain as notified, in particular clauses (a) and (b).
S151 Wellington Water Ltd	S151.053	Method M43: Supporting the health of urban waterbodies.	Amend	Refers to Section A of submission. Supports the provision with amendments. Notes the reference to Wellington Water Limited may not be appropriate in the future (or in all locations) and should be updated to ensure it remains relevant. Considers it inappropriate for the plan to include a method that commits other parties to 'incentivising' or 'research and development'. Considers a range of options should be provided for hydrological controls, not just tanks, and it would be helpful to confirm here the state of the environment monitoring and modelling that Greater Wellington will be undertaking.	Amend method as follows: Remove reference to Wellington Water Limited and replace with 'relevant water utility operator' or 'territorial authorities' or similar. Remove reference to incentivising and research and development by other parties. Provide further options than tanks for hydrological controls. Add confirmation that Greater Wellington will be undertaking all state of the environment monitoring and modelling. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S176 Te Awarua o Porirua Harbour and Catchments Community Trust & Guardians of Pāuatāhanui Inlet	S176.010	Method M43: Supporting the health of urban waterbodies.	Support	Supports Methods M43 and M45 to support the health of, and funding for, urban waterbodies, particularly in relation to stormwater discharges - and considers this needs to be considered by the City Councils when assessing improving existing urban sites or urban development projects.	Not stated.
S183 Yvonne Weeber	S183.175	Method M43: Supporting the health of urban waterbodies.	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.093	Method M43: Supporting the health of urban waterbodies.	Support	Not stated	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S188 Wellington Fish and Game Regional Council	S188.029	Method M43: Supporting the health of urban waterbodies.	Support	Considers need for adequate resourcing of compliance and monitoring staff to enable these targets to be met.	Not stated
S213 Pareraho Forest Trust	S213.005	Method M43: Supporting the health of urban waterbodies.	Support	Not stated	Retain as notified
S225 Upper Hutt City Council	S225.056	Method M43: Supporting the health of urban waterbodies.	Amend	Supports intent but not the reference to Wellington Water as future of water delivery model in the region is unclear. Notes clause 3(c) appears to point to a regulatory response in a non-regulatory method, considers this to be inappropriate.	Seek amendment to delete references to Wellington Water throughout the plan change and refer instead to water entities.
S240 Porirua City Council	S240.021	Method M43: Supporting the health of urban waterbodies.	Amend	Supports in principle but considers method lacks detail in terms of timing and methodology. Notes that 'deemed to comply' solutions should sit within provisions relating to hydrological controls as outlined in the submission.	Amend method to include timeframes and methodology for all actions.
S246 Water New Zealand	S246.026	Method M43: Supporting the health of urban waterbodies.	Not Stated	Notes PC1 rules and policy must be aligned with national direction and standards and there is work going on across legislative programmes, regulatory frameworks and infrastructure planning which will influence GWRC plans, compliance and enforcement. Supports the partnership with Wellington Water Limited approach in Method M43. Notes, in relation to clauses (b)(i)(2) and (b)(iii) that new developments are increasingly being required to include stormwater capture and retention but these systems can become a public health risk if not managed properly, and poorly designed systems can cause ponding and flooding. Notes some	Recommends that GWRC engage with, but not limited to the water regulators, Taumata Arowai and Commerce Commission, and Te Waihanga Infrastructure Commission Recommends that GWRC through Te Ura Kahika, with Taumata Arowai, the Ministry for Building, Innovation and Employment and Ministry for the Environment develop draft standard consent conditions or verification methods for on-site stormwater device design, construction, maintenance and on going compliance and a good practice stormwater storage volume or device sizing calculation tool

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				councils have developed performance criteria and identified acceptable solutions, such as Wellington Water and Auckland Council. Considers a standardised approach would lead to certainty for designers, planners and inspectors and significant cost and resource savings all round.	
S258 BP Oil NZ Ltd, Mobil Oil NZ Ltd, Z Energy Ltd - The Fuel Companies	S258.005	Method M43: Supporting the health of urban waterbodies.	Support	Supports Method M43	Retain method M43 as notified.
S261 Forest & Bird	S261.046	Method M43: Supporting the health of urban waterbodies.	Amend	Notes the RMA definition of "waterbody" does not capture estuaries or harbours. Considers reference to wetlands necessary to give effect to Policy 6 and section 3.22 of the NPSFM. Considers the method insufficient to manage pollution from the public and the potential to strengthen bylaws related to urban pollution.	<p>Amend as follows: Include direction to investigate regulating / requiring water sensitive design, rather than just providing 'education' on it, if not otherwise included in PC1.</p> <p>Amend chapeau: Wellington Regional Council will undertake programme(s) to support the health of waterbodies and coastal water, including rivers and streams, wetlands, estuaries and harbours, impacted by urban activities, including to:</p> <p>Include in M43 (a) that GWRC will investigate how it can strengthen stormwater, waste, and trade waste bylaws to reduce pollution, including from car washing on driveways and streets.</p> <p>Include in M43 (b) (i) that education materials will also be targeted at the public to cover activities like washing cars on driveways and on the street, pool water discharges, etc.</p> <p>Amend (b)(ii): investigate options to reduce the hydrological impacts on freshwater bodies and coastal water of stormwater</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					capture... Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S285 Civil Contractors New Zealand	S285.015	Method M43: Supporting the health of urban waterbodies.	Amend	Notes the reference to Wellington Water Limited may not be appropriate in the future (or in all locations) and should be updated to ensure it remains relevant. Considers a range of options should be provided for hydrological controls and confirmation should be provided on the state of the environment monitoring and modelling that Greater Wellington will be undertaking.	Retain method with amendments. The reference to Wellington Water Limited should be removed and replaced with 'relevant water utility operator' or 'territorial authorities' 'water controlling authority' or similar. Remove reference to incentivising and research and development by other parties. Provide further options than tanks for hydrological controls.
S286 Taranaki Whānui	S286.015	Method M43: Supporting the health of urban waterbodies.	Amend	Supports in principle, but notes this method is not timebound unlike action plans.	Amend method to include timeframes.
S288 China Forest Group Company New Zealand Ltd	S288.036	Method M43: Supporting the health of urban waterbodies.	Support	Notes national trend of water in urban environments as consistently the poorest and considers it is essential this is addressed.	Not stated
S5 Diane Strugnell	S5.005	Method M44: Supporting the health of rural waterbodies.	Not Stated	Considers any programmes implemented need to support rural landowners in various ways as identified. Concerned that the direct benefits associated with actions specified within the plan change are predominantly benefit for others where the cost are largely borne by the landowner. Considers the provision of appropriate support helps to redress this imbalance.	Retain as notified.
S9 Louise Askin	S9.009	Method M44: Supporting the health of rural waterbodies.	Amend	Seeks implementation of WIP recommendations 10, 11, 13, 14, 15 and 36.	Expand list to include other important non-regulatory measures proposed in the WIP, including support for catchment groups, additional water quality monitoring programmes, provision of local information/data,

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Considers the lack of water quality monitoring data and information on contaminant sources is a key limitation on the communities' ability to effect change in Mākara/Ohariu. Concerned support for catchment groups (urban and rural) is lacking in PC1. Considers PC1 needs to support community development of local catchment context and not rely on WIP or FWAP.	development of "catchment context, challenges and values".
S9 Louise Askin	S9.010	Method M44: Supporting the health of rural waterbodies.	Support	<p>Supports new focus on small rural properties as they may have different information channels compared to farms.</p> <p>Concerned GWRC has progressed the development of regulatory tools (PC1) but not additional non-regulatory tools as proposed in WIP.</p> <p>Concerned this has lost a communication opportunity during PC1 consultation stage, as GWRC could have presented communities with both regulatory tools and non-regulatory support, opposed to just the new rules.</p>	<p>Supports. Add "in partnership with community" in the description.</p> <p>Progress implementation with haste.</p>
S16 Pauatahanui Residents Association	S16.007	Method M44: Supporting the health of rural waterbodies. 		health of rural waterbodies.		method should provide for engagement with small landowners by a certain date.	
S29 Neil Deans	S29.008	Method M44: Supporting the health of rural waterbodies.	Support	Not stated	Retain as notified
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.035	Method M44: Supporting the health of rural waterbodies.	Support	Not stated	Not stated
S39 Fenaughty Partnership - Riu Huna Farm	S39.011	Method M44: Supporting the health of rural waterbodies.	Support	Would like compensation added to financial support available if large-scale land retirement progresses.	Prioritise financial options prior to implementing new rules.
S39 Fenaughty Partnership - Riu Huna Farm	S39.012	Method M44: Supporting the health of rural waterbodies.	Support	<p>Lack of data has led to assumptions and modelling which are not fit for purpose which makes it difficult to understand water quality and work out what solutions are needed.</p> <p>Considers wider contaminant sources across Makara and Ohariu are speculative and there is little acknowledgement of flooding and associated construction and remedial works along Takarau Gorge or the increasing number of houses being built and the potential for erosion and increases in sedimentation from these activities.</p>	Increase GWRC support for additional water quality monitoring in Mākara and Ohariu, including community-led monitoring.
S51 Mākara and Ohariu	S51.006	Method M44: Supporting the health of rural waterbodies.	Not Stated	Supports financial support and rates relief for land retirement. Seeks for compensation for large-scale land	Prioritise implementation of M44 prior to implementing new rules.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
large farms				retirement be included. Supports the farm-scale approach proposed.	
S51 Mākara and Ohariu large farms	S51.007	Method M44: Supporting the health of rural waterbodies.	Amend	Considers the modelling and assumptions informing PC1 are not fit for purpose and the lack of real data makes it difficult to identify issues and work out what solutions are required.	GWRC to provide support for additional water quality monitoring in Makara and Ohariu catchments
S95 sharyn hume	S95.001	Method M44: Supporting the health of rural waterbodies.	Support	Supports range of financial support options for land retirement but would like to see compensation included for large-scale land retirement. Seeks that a farm-scale approach be better integrated into sediment and erosion control policies and rules.	Prioritise this work prior to implementing new rules.
S95 sharyn hume	S95.002	Method M44: Supporting the health of rural waterbodies.	Amend	Considers modelling assumptions are not fit for purpose, and lack of local water quality monitoring data makes it hard to see where the water quality issue is and what solutions to implement.	Include increased GWRC support for additional water quality monitoring activities in Mākara and Ohariu, including community led.
S95 sharyn hume	S95.003	Method M44: Supporting the health of rural waterbodies.	Amend	Lack of consistency with WH.P22 (nitrogen) and WH.P23 (sediment). Thinks works to reduce e-coli levels should only target areas where e-coli is shown to be an issue, and there is not enough data to determine the levels and sources of e-coli across the area's multiple catchments. Local water quality studies need to be carried out and the option for landowner-led, farm-scale monitoring provided for, including monitoring of the impact from actions taken.	Add "incorporate e-coli reduction in catchment context and farm plans, based on monitored data"
S102 Donald Love	S102.009	Method M44: Supporting the health of rural waterbodies.	Not Stated	Supports promoting updates of good management practice but suggests there is confusion about the boundary between good and bad management practice. Notes the GWRC Erosion and Sediment Control Guidelines guide is more related to discharge in relation to earthworks.	Retain C.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S103 Kim Bowen	S103.001	Method M44: Supporting the health of rural waterbodies.	Amend	Concerned with the single monitoring site in the Makara river. Considers this does not give accurate idea of where the sediment or contaminants would be originating from. Considers GWRC should increase number of monitoring sites to identify where water quality improvements could be made.	Increase the water monitoring sites
S105 Hannah Bridget Gray (No2) Trust	S105.010	Method M44: Supporting the health of rural waterbodies.	Amend	Supports Porirua City Council's submission point on this provision. Strongly supports compliance incentives, such as relief rates for those actively making an effort, rather than regulatory enforcement.	Amend the definition in line with the Porirua City Council's submission point on this provision.
S117 John Bowen	S117.001	Method M44: Supporting the health of rural waterbodies.	Oppose	Considers there to be an insufficient amount of water quality monitoring sites in the Makara River. Suggests that data from the one and only monitoring site does not adequately show where sediment and contaminants are entering the river. Suggests that river banks washing away due to heavy rainfall or floods may be getting overlooked.	Increase the amount of water monitoring sites in the Makara catchment
S176 Te Awarua o Porirua Harbour and Catchments Community Trust & Guardians of Pāuatāhanui Inlet	S176.011	Method M44: Supporting the health of rural waterbodies.	Support	Supports Method M44 to support health of rural water bodies. Notes in order for rural landowners to retire pasture and undertake protective fencing of vegetation, especially on high erosion prone slopes, there must be a sufficient quid-pro quo for landowners by way of incentives and financial relief. Does not support local authority suggestions that lower valuations of land and therefore lower rates are already baked in to rating formulas and sufficient to compensate landowners for "doing the right thing" for the environment.	Seeks the following be implemented: (a) investigate financial support and rates relief options for accelerating retirement/revegetation of pastoral and plantation forestry land uses, and (b) support the effective uptake and implementation of Farm Environment Plans, and (c) promote uptake of good management practice in rural land uses, including for pastoral farming and plantation forestry, and (d) develop and deliver a specific programme of engagement and education with small (<20ha) landowners.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested

S222 Environmental Defence Society Inc.	S222.020	Method M44: Supporting the health of rural waterbodies.	Amend	To give effect to NPSFM.	Include reference to "wetlands" in the chapter.
S224 Terawhiti Farming Co Ltd	S224.006	Method M44: Supporting the health of rural waterbodies.	Support	Supports financial support and rates relief for land retirement. Seeks for compensation for large-scale land retirement be included. Supports the farm-scale approach proposed.	Prioritise this work prior to implementing new rules. Integrate farm-scale approach into PC1's sediment and erosion control policies and rules.
S224 Terawhiti Farming Co Ltd	S224.007	Method M44: Supporting the health of rural waterbodies.	Amend	Considers the lack of local water quality monitoring data means GWRC has had to make assumptions based on modelling, which are not fit for purpose. Notes the lack of data also makes it difficult to see where the water quality is and what solutions to implement on farm.	Increase GWRC support for additional water quality monitoring activities in Mākara and Ohariu, including community-led.
S225 Upper Hutt City Council	S225.057	Method M44: Supporting the health of rural waterbodies.	Support	Not stated	Delete clause 3(c) or amend so that this is a non-regulatory method.
S229 Te Kamaru Station Ltd	S229.006	Method M44: Supporting the health of rural waterbodies.	Support	Is pleased to see that a range of financial support options for land retirement are proposed, including rates relief and would like to see this also include compensation if large-scale land retirement progresses. Also pleased to see the farm-scale approach promoted.	Prioritise this work prior to implementing new rules. Integrate farm-scale approach into PC1's sediment and erosion control policies and rules.
S229 Te Kamaru Station Ltd	S229.007	Method M44: Supporting the health of rural waterbodies.	Amend	Considers the lack of local water quality monitoring data means GWRC has had to make assumptions based on	Increase GWRC support for additional water quality monitoring activities in Mākara and Ohariu, including community-led.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		health of rural waterbodies.		modelling, which are not fit for purpose. Notes the lack of data also makes it difficult to see where the water quality is and what solutions to implement on farm.	
S231 Te Marama Ltd	S231.007	Method M44: Supporting the health of rural waterbodies.	Support	Supports range of financial support options for land retirement (including rates relief) and the farm-scale approach being promoted.	Seeks farm scale approach is better integrated into PC1's sediment and erosion control policies and rules and seeks financial compensation if large-scale land retirement progresses.
S231 Te Marama Ltd	S231.008	Method M44: Supporting the health of rural waterbodies.	Amend	Considers lack of local water quality monitoring data means GWRC has had to make assumptions based on modelling, which submitter considers are not fit for purpose. Notes lack of data also makes it difficult for submitter to see where the water quality is and what solutions are required.	GWRC provide more support for additional water quality monitoring activities in Makara and Ohariu, including community-led
S240 Porirua City Council	S240.022	Method M44: Supporting the health of rural waterbodies.	Amend	Supports in principle but considers method lacks detail in terms of timing and methodology.	Amend method to include timeframes and methodology for all actions.
S261 Forest & Bird	S261.047	Method M44: Supporting the health of rural waterbodies.	Amend	Notes the RMA definition of "waterbody" does not capture estuaries or harbours. Considers reference to wetlands necessary to give effect to Policy 6 and section 3.22 of the NPSFM.	Amend as follows: Wellington Regional Council, working with primary sector organisations, will undertake a programme(s) to support the health of waterbodies and coastal water , including rivers, streams, wetlands , estuaries and harbours, impacted by rural activities, including to: Add new clause:(e) investigate options, including financial support and rates relief options, education, advice, and provision of plants, to encourage and enable wetland restoration Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S286 Taranaki Whānui	S286.016	Method M44: Supporting the health of rural waterbodies.	Amend	Supports in principle, but notes this method is not timebound unlike action plans.	Amend method to include timeframes.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S288 China Forest Group Company New Zealand Ltd	S288.037	Method M44: Supporting the health of rural waterbodies.	Amend	Considers this reflects the recommendations of whaitua committees.	Amend to include: deliver a specific programme of engagement with forestry practitioners
S22 Lynn Cadenhead	S22.022	Method M45: Funding of wastewater and stormwater network upgrades	Support	Supports the health of, and funding for, urban waterbodies. Notes the benefit of endorsement by local authorities in existing and new development.	Not stated.
S29 Neil Deans	S29.009	Method M45: Funding of wastewater and stormwater network upgrades	Support	Supports Methods M43 and M44 and suggests this would also benefit from active endorsement by territorial local authorities in the development of existing and new urban development.	Not stated.
S31 Stormwater r360	S31.002	Method M45: Funding of wastewater and stormwater network upgrades	Not Stated	Suggests overseas approaches for funding strategies and ideas are investigated, noting payment from manufacturers for certification of proprietary treatment devices as an example.	Not stated
S33 Wellington City Council	S33.022	Method M45: Funding of wastewater and stormwater network upgrades	Support	Support funding opportunities for stormwater network upgrades.	Retain as notified
S105 Hannah Bridget Gray (No2) Trust	S105.012	Method M45: Funding of wastewater and stormwater network upgrades	Amend	Supports Porirua City Council's submission point on this provision.	Amend the definition in line with the Porirua City Council's submission point on this provision.
S113 Zealandia	S113.007	Method M45: Funding of	Support	Supports improved water quality outcomes with specific funding allocated	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Te Māra a Tāne		wastewater and stormwater network upgrades		towards stormwater and wastewater network upgrades. Notes that the Kaiwharawhara awa has endured harm due to stormwater and wastewater overflows which violates the principles of Te Mana o Te Wai. Considers Wellington Water Ltd. is not adequately resourced to upgrade sewerage networks within their allocated funding.	
S176 Te Awarua o Porirua Harbour and Catchments Community Trust & Guardians of Pāuatahanui Inlet	S176.012	Method M45: Funding of wastewater and stormwater network upgrades	Support	Supports Methods M43 and M45 to support the health of, and funding for, urban waterbodies, particularly in relation to stormwater discharges - and considers this needs to be considered by the City Councils when assessing improving existing urban sites or urban development projects.	Not stated.
S183 Yvonne Weeber	S183.177	Method M45: Funding of wastewater and stormwater network upgrades	Support	Considers additional funding is important to speed up the Wellington City Council stormwater network and wastewater catchments.	Not stated
S186 Guardians of the Bays Inc	S186.094	Method M45: Funding of wastewater and stormwater network upgrades	Support	Additional funding is important to upgrade the Wellington City Council stormwater network and wastewater catchments.	Not stated
S193 Wairarapa Federated Farmers	S193.055	Method M45: Funding of wastewater and stormwater network upgrades	Amend	References general comments on sediment from pastoral farming.	Amend to direct Council to identify additional sources of funding for erosion/sediment controls and riparian management in rural areas to support achievement of TAS, including funding to provide for voluntary buyout of land; and/or insert a new policy directing Council to this effect.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					Make any consequential amendment(s) necessary to give effect to the relief sought.
S213 Pareraho Forest Trust	S213.007	Method M45: Funding of wastewater and stormwater network upgrades	Support	Concerns financial cost of task exceeds what can be raised from locals. Considers government support needed.	Retain as notified
S222 Environme ntal Defence Society Inc.	S222.021	Method M45: Funding of wastewater and stormwater network upgrades	Support	To give effect to NPSFM.	Not stated
S225 Upper Hutt City Council	S225.058	Method M45: Funding of wastewater and stormwater network upgrades	Amend	Concerned that this is unclear if territorial authorities are being consulted on funding opportunities or expected to financially contribute.	Amend for clarity noting that territorial authority's already have stretched budgets that are unlikely to be able to fund works not already anticipated in the long term plan processes.
S240 Porirua City Council	S240.023	Method M45: Funding of wastewater and stormwater network upgrades	Amend	Supports in principle but considers method lacks detail in terms of timing and methodology. Questions the achievability of other regulatory provisions if additional sources of funding cannot be accessed.	Amend method to include timeframes and methodology, and/or amend regulatory policies that are reliant on additional funding for wastewater and stormwater networks to be achievable with existing funding sources.
S246 Water New Zealand	S246.027	Method M45: Funding of wastewater and stormwater network upgrades	Support	Supports the addition of Method M45. Appreciates that a new, financially sustainable, funding model for water services delivery is needed and arrangements which avoid an investment hiatus, and enable a well-defined, committed, and funded pipeline of work will help the delivery of safe and environmentally appropriate water services.	Add the economic and Taumata Arowai and the Commerce Commission into this method.
S249 Isabella Cawthorn	S249.015	Method M45: Funding of wastewater	Support	Considers Method M45 a good thing with regards to funding	Avoid funding gaps

		coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.			
S101 Wellington International Airport Limited	S101.038	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.	Amend	Supports the intent to improve the health of freshwater bodies and coastal marine area but considers "wai ora", as expressed in the objectives, cannot be achieved at the Airport due to its operational and functional requirements. Notes as examples: protecting the seawall surrounding the Airport is critical to the ongoing operational of the Airport and reverting the coast to its "natural character" would not be practicable in this location, and restoration of freshwater bodies where located within the Airport site will potentially affect the ongoing operation and development of the Airport. Notes higher order planning documents (such as the NPS-FM and the NPS-IB) provide a path for specified infrastructure to undertake activities within freshwater bodies in accordance with the effects management hierarchy. Considers that the objective to be wai ora by 2100 should be qualified rather than absolute.	Amend the Objective after reviewing the extent to which the objective should apply to sites containing critical infrastructure and whether such an objective is appropriate where it is also necessary to utilise natural and physical resources to meet the economic and social needs of Wellington's communities. Or delete and revert to Operative NRP.
S113 Zealandia Te Māra a Tāne	S113.008	Objective WH.O1: The health of all freshwater bodies and the coastal marine	Support	Supports establishing a vision to restore the āhua of freshwater bodies by 2100 with specific goals to accomplish this vision in the interim. Considers this aspiration aligns with the 100-year vision of Sanctuary to Sea Kia Mouriora te	Not stated

		bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.		been degraded, otherwise considers there is an unrealistic requirement on what it is being restored and the baseline state. Considers the requirement for margins of freshwater bodies to be planted will not be practicable in all instances, such as where freshwater bodies are piped or of a concrete channel. Seeks amendment to "as far as practicable", noting that all types of waterbodies are captured, and planting may not be possible or desirable for some.	<p>marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.</p> <p>Note In the wai ora state: Āhua (natural character) is restored where it has been degraded and freshwater bodies exhibit their natural quality, rhythms, range of flows, form, hydrology and character. All freshwater bodies have planted margins as far as practicable All freshwater bodies and coastal waters have healthy functioning ecosystems and their water conditions and habitat support the presence, abundance, survival and recovery of At-risk and Threatened species and taonga species Mahinga kai and kaimoana species are healthy, plentiful enough for long term harvest and are safe to harvest and eat or use, including for manuhiri and to exercise manaakitanga Mana whenua are able to undertake customary practices at a range of places throughout the catchment.</p>
S210 Guildford Timber Company Limited, Silverstream Forest Limited and the Goodwin Estate Trust.	S210.020	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.	Amend	Notes aspirational intent of objective to progressively improve the health of freshwater bodies (and the coastal marine area) and for them to be in a wai ora state by 2100. While generally supporting intent of the objective, the submitters note the objective is all-inclusive (relates to the health of all freshwater bodies) and the wai ora state requires all freshwater bodies to have planted margins which may not be physically or legally (due to property rights) possible. The submitter notes that the term 'freshwater bodies' is not defined in the RMA or any of the relevant planning instruments (NPS-FW; NES-FW; RPS; NRP), but freshwater is defined in the RMA as "means all water except coastal water and geothermal	Amend WH.O1 to apply to natural freshwater bodies to avoid the all-inclusive nature of the intent which has unintended consequences.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				water". This means that the all-inclusive intent of Objective WH.O1 will apply freshwater bodies (such as roadside channels and man-made drains that convey freshwater) which is considered impracticable and unnecessary. The submitters consider the objective be amended to apply to natural freshwater bodies to avoid unintended consequences.	
S211 Hutt City Council	S211.006	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.	Support	Supports the 100 year vision towards full restoration of te-Whanganui-a-Tara's waterways. Seeks clarification on whether the text from "Note In the wai ora state..." is part of the objective or is an advisory note. Considers it is not physically possible for all water bodies to have planted margins, therefore seeks that the requirement for planted margins be qualified with "where possible".	Objective WH.O1 The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100. Note In the wai ora state: -Āhua (natural character) is restored and freshwater bodies exhibit their natural quality, rhythms, range of flows, form, hydrology and character -All freshwater bodies have planted margins where possible -All freshwater bodies and coastal waters have healthy functioning ecosystems and their water conditions and habitat support the presence, abundance, survival and recovery of At-risk and Threatened species and taonga species -Mahinga kai and kaimoana species are healthy, plentiful enough for long term harvest and are safe to harvest and eat or use, including for manuhiri and to exercise manaakitanga -Mana whenua are able to undertake customary practices at a range of places throughout the catchment.
S213 Pareraho Forest Trust	S213.008	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-	Support	Strongly support improvement of health for all freshwater in Whaitua. Considers there is room for improvement to raise te mana o te wai, including its safety for recreation, mahinga kai, taonga species and ecological health.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

		Tara is progressively improved and is wai ora by 2100.			
S222 Environmental Defence Society Inc.	S222.022	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.	Amend	To give effect to NPSFM.	Delete "Note" so that the wai ora state has legal effect as part of the objective. Amend 2100 to 2050 to reflect the urgency of addressing freshwater issues and the biodiversity crisis.
S225 Upper Hutt City Council	S225.059	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.	Support	Not stated	Retain as notified acknowledging that this is an aspirational objective that would be difficult to measure.
S245 Tama Potaka, Minister of Conservation	S245.001	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te	Amend	Considers provision gives effect to Part II of the RMA and the NPS Freshwater Objectives and Policies, including Te Mana o te Wai. Questions the achievability of having planted margins in all waterbodies.	Amend bullet point two from: " All freshwater bodies have planted margins " to " All freshwater bodies have vegetated margins where practicable. "

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		Whanganui-a-Tara is progressively improved and is wai ora by 2100.			
S257 Kāinga Ora	S257.010	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.	Not Stated	<p>Mostly supportive of the proposed objectives but notes that some objectives would be difficult to achieve. Seeks outcomes across PC1 to ensure the Plan Change does not extend beyond that necessary to implement the NPS-FM, noting the considerable additional regulatory burden such a framework imposes upon a range of stakeholders. Considers this appropriate to ensure PC1 does not unnecessarily fetter the ability to deliver development outcomes, noting the national significance of enabling urban development.</p> <p>In terms of timelines for achievement of the Target Attribute States provided within the provisions at WH.O2, WH.O3, Table 8.1 , WH.O8, Table 8.4, and WH.P4, seeks an extended timeframe from the 2040 currently prescribed to a more realistic timeframe to consider the costs and feasibility of achieving the TAS.</p>	<p>Consequential changes sought where relevant to reconcile outcomes to changes sought in specific rules.</p> <p>Amendments to align with and not go beyond what is required under the NPS-FM.</p> <p>Amend to reflect an extended timeline for the achievement of TAS which takes into consideration the feasibility and cost of achieving the prescribed timeframes.</p> <p>Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.</p>
S261 Forest & Bird	S261.049	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively	Amend	<p>Considers the explanation of the wai ora state should form part of the objective, rather than being a note which can be argued to have no legal effect. Considers 2100 too far away to achieve wai ora, highlighting biodiversity loss and climate change as current threats. Suggests that different target timeframes could be provided for part FMUs, per the level of degradation in each catchment. Notes</p>	<p>Amend as follows: The health of all freshwater bodies, ephemeral watercourses, and the coastal marine area...</p> <p>Delete the word "note".</p> <p>Retain the balance of the objective.</p> <p>Amend the target timeframe to be 2050, or to provide part-FMU / catchment specific timeframes that account for the relative ease/difficulty of achieving targets in</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		improved and is wai ora by 2100.		some places may already be in a wai ora state.	different catchments. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S286 Taranaki Whānui	S286.018	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.	Amend	Supports full restoration of Te-Whanganui-a-Tara's waterways to wai ora. Considers it is unclear if text from "Note..." forms part of objective or it is some form of advisory note. Seeks word "note" should be deleted as bullet points are an important part of the objective. Mana whenua seek customary practices can be undertaken throughout catchment rather than just as a designated range of locations. Otherwise, the objective could be achieved without doing anything as customary practices can take place already at a range of places.	Amend objective as follows: Objective WH.O1 The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100. Note In the wai ora state: <ul style="list-style-type: none"> • Āhua (natural character) is restored and freshwater bodies exhibit their natural quality, rhythms, range of flows, form, hydrology and character • All freshwater bodies have planted margins • All freshwater bodies and coastal waters have healthy functioning ecosystems and their water conditions and habitat support the presence, abundance, survival and recovery of At-risk and Threatened species and taonga species • Mahinga kai and kaimoana species are healthy, plentiful enough for long term harvest and are safe to harvest and eat or use, including for manuhiri and to exercise manaakitanga • Mana whenua are able to undertake customary practices at a range of places throughout the catchment.
S288 China Forest Group Company New Zealand Ltd	S288.038	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and	Amend	Seeks clarification on "waiora state", noting natural character is not a condition fixed in time. Considers the description needs to include the caveat that natural character refers to a waterbody's state in response to input conditions that are managed to achieve a level of naturalness. Notes climate change may mean natural character is not the same as current targets, which risks a mismatch between what is legally enforced and what is achievable.	Include the caveat that natural character refers to a waterbodies state in response to a variety of input conditions that are managed to achieve a level of naturalness.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

		their margins are on a trajectory of measurable improvement towards wai ora.			
S101 Wellington International Airport Limited	S101.039	Objective WH.O2: The health and wellbeing of Te Whanganui-a-Tara's groundwater, rivers and natural wetlands and their margins are on a trajectory of measurable improvement towards wai ora.	Amend	Supports the general intention of this objective but notes there are practical difficulties with an absolute requirement for wai ora to be achieved. Considers it important to recognise that the trajectory required by the objective is to be applied at a Whaitua or catchment wide level and that localised effects will not necessarily preclude the overall outcomes from being achieved. Note higher order planning documents (such as the NPS-FM and NPS-IB) provide a path for specified infrastructure to undertake activities within freshwater bodies (such as rivers and wetlands).	Amend the objective to clarify that the reference to the health and wellbeing of Te Whanganui-a-Tara is at a broad, regional level (and thus recognising that there may be localised effects arising as a result of specified infrastructure undertaking activities in rivers and wetlands. Review the extent to which the objective should apply to sites containing critical infrastructure and amend accordingly. Review whether such an objective is appropriate where it is also necessary to utilise natural and physical resources to meet the economic and social needs of Wellington's communities and amend accordingly. Or delete and revert to Operative NRP.
S113 Zealandia Te Māra a Tāne	S113.009	Objective WH.O2: The health and wellbeing of Te Whanganui-a-Tara's groundwater, rivers and natural wetlands and their margins are on a trajectory of measurable improvement towards wai ora.	Support	Supports establishing a vision to restore the āhua of freshwater bodies by 2100 with specific goals to accomplish this vision in the interim. Considers this aspiration aligns with the 100-year vision of Sanctuary to Sea Kia Mouriora te Kaiwharawhara to restore the mouri of the Kaiwharawhara catchment, so that the wellbeing of te awa, te ngahere, and ngā tāngata are restored and thriving.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		objectives set out in Table 8.1.			
S261 Forest & Bird	S261.051	Objective WH.O3: The health and wellbeing of coastal water quality, ecosystems and habitats in Te Whanganui-a-Tara is maintained or improved to achieve the coastal water objectives set out in Table 8.1.	Oppose	Considers timeframe too far away to ensure coastal values in Te Whanganui-a-Tara are not compromised.	Amend timeframe for achievement to 2030. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S286 Taranaki Whānui	S286.020	Objective WH.O3: The health and wellbeing of coastal water quality, ecosystems and habitats in Te Whanganui-a-Tara is maintained or improved to achieve the coastal water objectives set out in Table 8.1.	Amend	Supports full restoration of Te-Whanganui-a-Tara's waterways towards wai ora by 2040 but notes significant infrastructure investment is required by 2040 to meet the E.coli target. Submitter is concerned this target will not be achievable with current funding mechanisms. Considers it should be a priority to find new streams of funding that are not reliant on the existing ratepayer base and regular monitoring and reporting on progress towards the target is completed.	Retain objective provided: -Method M45 is implemented as a priority and new infrastructure funding mechanisms are put in place; and -regular monitoring and reporting is undertaken on progress towards the target.
S288 China Forest Group	S288.040	Objective WH.O3: The health and wellbeing of	Support	Not stated	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Company New Zealand Ltd		coastal water quality, ecosystems and habitats in Te Whanganui-a-Tara is maintained or improved to achieve the coastal water objectives set out in Table 8.1.			
S33 Wellington City Council	S33.026	Table 8.1 Coastal water objectives.	Amend	Considers the 2040 timeframe will be difficult to achieve, and does not take into account the environmental and financial constraints of Wellington City Council. Suggests the 2060 timeframe is consistent with WCC's spatial planning framework, and more consistent with the long-term plan and strategic financing of upgrades and expansions to the three waters network.	Amend timeframe from 2040 to 2060.
S101 Wellington International Airport Limited	S101.041	Table 8.1 Coastal water objectives.	Support	Supports the coastal water objectives set out in Table 8.1.	Retain as notified.
S151 Wellington Water Ltd	S151.057	Table 8.1 Coastal water objectives.	Oppose	Considers Table 8.1 lacks the required information to set baseline states for the Coastal Water Management Units to assess whether the state is being maintained or improved, and lacks timeframes for when the baseline will be determined.	Alter timeframe to 2060 and Withdraw table until further detail in relation to the baseline states and required timeframes can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S183 Yvonne Weeber	S183.181	Table 8.1 Coastal water objectives.	Support	Not stated	Not stated

of the Bays Inc					
S193 Wairarapa Federated Farmers	S193.059	Table 8.1 Coastal water objectives.	Amend	Amend to be consistent with the NPS-FM	Add column for measured baseline state Amend numeric targets to read 'maintain or improve'; Delete timeframe Make any consequential amendment(s) necessary to give effect to the relief sought.
S211 Hutt City Council	S211.007	Table 8.1 Coastal water objectives.	Oppose	Considers increased cost to ratepayers to meet the 2040 E. coli target timeframe on top of business as usual rates increase is unaffordable. Considers a 2060 target more achievable than the 2040 target, providing other funding avenues are explored such as growth charging and debt funding and significant central government funding. Considers that repairing the public network would only reduce a portion of the contaminant load, noting that there will be substantial costs to landowners to upgrade pipes within the private wastewater network to meet the proposed 2040 target, particularly in relation to achieving Criteria WH.O3 (g) and (h). Concerned with lack of information on the achievability of target attribute states, including the impact on Council assets and city wide development capacity to allow informed decision making, citing similar concerns raised by other parties as set out in the s32 report. Considers that the funding requirements on housing and business development capacity is not sufficiently explored in the s32 evaluation	Amend the timeframe for target states for E.coli and enterococci coastal water objectives to 2060.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S222 Environmental Defence Society Inc.	S222.025	Table 8.1 Coastal water objectives.	Amend	Considers key coastal water quality parameters are missing and more stringent timeframes are required.	<p>Include a parameter for Turbidity. Wording for parameter is as follows:Unit: NTU; Statistic: Turbidity must be maintained at or below the current annual median or at or below pre-existing levels, whichever is lesser; Te Whanganui-a-Tara Harbour and estuaries, Makara Estuary, Wainuiomata Estuary: <6.9; Wai Tai: No discernible change).</p> <p>Add further parameters (for example lead, dissolved oxygen, temperature, pH, secchi depth, chlorophyll-a, total phosphorous, total nitrogen, nitrite-nitrate nitrogen, ammoniacal nitrogen, and faecal coliforms) to ensure narrative objectives in Table 3.8 of the Operative Plan are met.</p> <p>Amend Wai Tai unit for Enterococci: <200 <40</p> <p>Add interim timeframes as per NPSFM 3.11.</p>
S261 Forest & Bird	S261.052	Table 8.1 Coastal water objectives.	Oppose	Considers key coastal water quality parameters are missing. Considers more stringent timeframes are required.	<p>Include a parameter for Turbidity:(Unit: NTU; Statistic: Turbidity must be maintained at or below the current annual median or at or below pre-existing levels, whichever is lesser; Te Whanganui-a-Tara Harbour and estuaries, Makara Estuary, Wainuiomata Estuary: <6.9; Wai Tai: No discernible change)</p> <p>Add further parameters (for example lead, dissolved oxygen, temperature, pH, secchi depth, chlorophyll-a, total phosphorous, total nitrogen, nitrite-nitrate nitrogen, ammoniacal nitrogen, and faecal coliforms) to ensure narrative objectives in Table 3.8 of the Operative Plan are met.</p> <p>Amend Wai Tai unit for Enterococci: <200 <40</p> <p>Add interim timeframes as per NPSFM 3.11.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S188 Wellington Fish and Game Regional Council	S188.037	Objective WH.08: Primary contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact.	Not Stated	Concerns with lack of factors considered as causing waterbodies to be unstable for contact recreation. Questions consideration for other impacts to be managed to create primary contact sites within these rivers	Not stated
S189 SAMUEL KAHUI	S189.006	Objective WH.08: Primary contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact.	Support	Not stated	Support to improve Wai TAS to achieve safe access and contact.
S193 Wairarapa Federated Farmers	S193.064	Objective WH.08: Primary contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River,	Support	Supports prioritising primary contact sites for improvement.	Add clause directing collection of robust data for sites with insufficient information. Make any consequential amendment(s) necessary to give effect to the relief sought.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		Akatarawa River and Wainuiomata River are suitable for primary contact.			
S211 Hutt City Council	S211.008	Objective WH.08: Primary contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact.	Support	Considers there are significant challenges in terms of the costs to upgrade the wastewater network to achieve the reduction in E.coli by 2040. Supports the inclusion of 2040 in Objective WH.08 on the basis that it does not impose the same significant challenges and costs on Council.	Amend Objective WH.08 as follows: Primary contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact by ensuring that by 2040 2060 : (a) Escherichia coli concentrations are at least maintained, or improved where the target attribute states in Table 8.3 are not met, and (b) there is low risk of health effects from exposure to benthic cyanobacteria.
S213 Pareraho Forest Trust	S213.013	Objective WH.08: Primary contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact.	Amend	Requests adding Speedys Stream at Taniwha Pool to WH.08. WWL monitor E.coli so a baseline numeric is available. Notes wastewater pipe leaks have resulted in removal of the site from community swimming activities. Considers TAS should be set to a state that improves on the current state. Resolving regular sewage overflows into streams and making them consistently suitable for contact recreation is valued and expected by the local community.	Add Speedys Stream at Taniwha Pool to Map 85 as a primary contact site. Identify and add similar small stream sites of high recreational contact in the Whaitua.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S222 Environmental Defence Society Inc.	S222.031	Objective WH.08: Primary contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact.	Amend	To give effect to NPSFM.	Amend 2040 to 2030 to reflect the urgency of addressing freshwater issues and the biodiversity crisis.
S225 Upper Hutt City Council	S225.064	Objective WH.08: Primary contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact.	Support	Supports in principle but may have specific comments on policies and rules that implement this objective.	Retain as notified
S261 Forest & Bird	S261.058	Objective WH.08: Primary contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River,	Amend	Considers 2040 too far away to achieve "at least maintained" water quality, noting the intent of the Essential Freshwater program to halt freshwater degradation and "start making immediate improvements so water quality improves within five years".	Shorten timeframe to 2030 Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		Akatarawa River and Wainuiomata River are suitable for primary contact.			
S282 Pat van Berkel	S282.010	Objective WH.O8: Primary contact sites within Te Awa Kairangi/Hutt River, Pākūratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact.	Oppose	<p>Opposes Objective WH.O8 as it does not require e.coli level improvements by 2040 and omits measures for benthic cyanobacteria or cyanobacteria blooms. It also omits measures of swimmable days which is an easy-to-understand measure for the public.</p> <p>Objective WH.O8 (b) does not cover risk to dogs as 'primary contact' refers to humans. Notes it is likely more people visit river with dogs than those without dogs.</p>	<p>Amend Objective WH.O8 to remove the words 'by ensuring' and replacing them with 'and ensure'. Amend objective to cover the risk to dogs.</p>
S286 Taranaki Whānui	S286.027	Objective WH.O8: Primary contact sites within Te Awa Kairangi/Hutt River, Pākūratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact.	Amend	<p>Supports full restoration of Te-Whanganui-a-Tara's waterways towards wai ora by 2040 but notes significant infrastructure investment is required by 2040 to meet the E.coli target. Submitter is concerned this target will not be achievable with current funding mechanisms. Considers it should be a priority to find new streams of funding that are not reliant on the existing ratepayer base and regular monitoring and reporting on progress towards the target is completed.</p>	<p>Retain objective provided: -Method M45 is implemented as a priority and new infrastructure funding mechanisms are put in place; and -regular monitoring and reporting is undertaken on progress towards the target.</p>

S288 China Forest Group Company New Zealand Ltd	S288.043	Objective WH.O8: Primary contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact.	Support	Not stated	Not stated
S18 PF Olsen Ltd	S18.020	Table 8.3 Primary contact site objectives in rivers.	Amend	Considers the setting of the proposed target attribute states has not been consistent with 3.11(8) of the NPS-FM. Considers there is a lack of due consideration given to the environmental outcomes, target attribute states of receiving environments, and connections between water bodies, as required by the clause. Questions the effectiveness of the proposed target attribute states and considers that they do not reflect an adequate understanding of environmental outcomes. Questions the use of freshwater accounting systems to inform the setting of target attribute states and emphasises the importance of accurate and up-to-date information.	Revise target attribute states in accordance with Clause 3.11(8) of the NPS-FM.
S22 Lynn Cadenhead	S22.024	Table 8.3 Primary contact site objectives in rivers.	Support	Supports numerical requirements for running waters in addition to those for lakes. Considers human health for contact recreation should be the standard where the water bodies are used for that purpose.	Human health for contact recreation be the standard where water bodies are used for that purpose

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S29 Neil Deans	S29.011	Table 8.3 Primary contact site objectives in rivers.	Support	Supports numerical requirements for running waters in addition to those for lakes. Considers human health for contact recreation should be the standard where the water bodies are used for that purpose.	Human health for contact recreation be the standard where water bodies are used for that purpose
S33 Wellington City Council	S33.031	Table 8.3 Primary contact site objectives in rivers.	Neutral	Considers the 2040 timeframe will be difficult to achieve, and does not take into account the environmental and financial constraints of Wellington City Council. Suggests the 2060 timeframe is consistent with WCC's spatial planning framework, and more consistent with the long-term plan and strategic financing of upgrades and expansions to the three waters network.	Amend timeframe from 2040 to 2060.
S115 Mary Hutchinson	S115.004	Table 8.3 Primary contact site objectives in rivers.	Support	Supports numerical requirements for lakes and surface water, particularly the Hutt River catchment in Table 8.3. Supports human health/contact recreation being the standard where water bodies are used for that purpose	Not stated
S183 Yvonne Weeber	S183.187	Table 8.3 Primary contact site objectives in rivers.	Support	Not stated	Not stated
S202 Graeme Iain Shellard , Sarah Elizabeth Shellard, Cameron Anthony Shellard, Finlay David ShellardGr	S202.007	Table 8.3 Primary contact site objectives in rivers.	Oppose	Notes there is no date range of collection of baseline data, no information relating to data collection or relating to recent weather patterns or river flows, nor any ongoing major works (including deforestation / harvesting) which impact water quality. Considers this means the information presented is flawed.	Withdraw PC1. Develop and implement improvements through community-based support / education supported by measurements and reporting

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
aeme Shellard					
S261 Forest & Bird	S261.059	Table 8.3 Primary contact site objectives in rivers.	Not Stated	Considers interim states should be set out for 2033 at the latest, in accordance with the NPSFM.	Set targets for 2030 and outline date from which maintenance will be continued. If date remains 2040, set out interim states at no longer than 10-year intervals. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S282 Pat van Berkel	S282.011	Table 8.3 Primary contact site objectives in rivers.	Amend	Seeks addition of 'swimmable days' as a parameter in Table 8.3 as it easily understood by public and encompasses all quality reasons for why a river is not swimmable. Seeks addition of a benthic cyanobacteria or cyanobacteria blooms measure as a parameter in Table 8.3. Considers this a key measure for Te Awa Kairangi due to toxic algae in the river killing dogs and affecting people.	Add a Parameter in Table 8.3, namely " Swimmable Days ". Add a Parameter in Table 8.3 which is a measure of benthic cyanobacteria or cyanobacteria blooms.
S286 Taranaki Whānui	S286.028	Table 8.3 Primary contact site objectives in rivers.	Amend	Supports full restoration of Te-Whanganui-a-Tara's waterways towards wai ora by 2040 but notes significant infrastructure investment is required by 2040 to meet the E.coli target. Submitter is concerned this target will not be achievable with current funding mechanisms. Considers it should be a priority to find new streams of funding that are not reliant on the existing ratepayer base and regular monitoring and reporting on progress towards the target is completed.	Retain objective provided: -Method M45 is implemented as a priority and new infrastructure funding mechanisms are put in place; and -regular monitoring and reporting is undertaken on progress towards the target.
S33 Wellington City Council	S33.032	Objective WH.O9: Water quality, habitats, water quantity and ecological	Support	Support the goal of maintaining and improving where appropriate.	Retain as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		processes of rivers are maintained or improved.			
S151 Wellington Water Ltd	S151.059	Objective WH.09: Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved.	Amend	Refers to Section A of submission for additional context regarding prioritisation and target attribute states, and comments on Table 8.4. Considers Clause (a) needs to refer to 'meaningful progress' as specified by WH.02(a). Considers Clause (d) Huangā needs to refer to Schedule B to provide certainty for applicants and notes there appears to be a typo .	Revise clause (a) as follows: 'where a target attribute state in Table 8.4 is not met, the state of that attribute is improved in all rivers and river reaches in the part Freshwater Management Unit so that the target attribute state is met within the timeframe indicated within Table 8.4, or meaningful progress has been made and' Link huangā with Schedule B and improve wording. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		habitats, water quantity and ecological processes of rivers are maintained or improved.		as a potential value in the NPSFM. Considers protection of natural form and character is required to protect habitat.	Amend Table WH.09 to include physical habitat and natural form and character attributes. Retain balance of objective. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S282 Pat van Berkel	S282.013	Objective WH.09: Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved.	Amend	Supports in part the objective but notes it is incomplete.	Not stated
S286 Taranaki Whānui	S286.029	Objective WH.09: Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved.	Support	Support in principle.	Retain as notified.
S288 China Forest Group Company New Zealand Ltd	S288.044	Objective WH.09: Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved.	Oppose	Considers the requirement for attribute improvement in all river reaches if TAS is not met in Prt FW management unit monitoring sites does not reflect good management. Considers a failure to meet TAS at a part FMU monitoring site should require identification of the problem source and focus on raising TAS performance in that area. Notes TAS in some sub-catchments may already be met and are not practicably able to be improved.	Adjust to reflect good management.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S17 John Easterher	S17.013	Table 8.4: Target attribute states for rivers.	Amend	Concerned about the reliance on the use of a single monitoring site to support the provisions in PC1. Water quality targets and timeframes are unrealistic.	Targets for Makara Stream in table 8.4 should be tagged as indicative and non operational until targets can be determined to represent sub catchments at the confluences of major tributaries. Timeframe be determined by implementing intergenerational land use changes. The specified timeframe of 2040 should be replaced with an indicative figure, suggesting 2100 may be achievable.
S18 PF Olsen Ltd	S18.021	Table 8.4: Target attribute states for rivers.	Amend	Considers the setting of the proposed target attribute states has not been consistent with 3.11(8) of the NPS-FM. Considers there is a lack of due consideration given to the environmental outcomes, target attribute states of receiving environments, and connections between water bodies, as required by the clause. Questions the effectiveness of the proposed target attribute states and considers that they do not reflect an adequate understanding of environmental outcomes. Questions the use of freshwater accounting systems to inform the setting of target attribute states and emphasises the importance of accurate and up-to-date information.	Revise target attribute states in accordance with Clause 3.11(8) of the NPS-FM.
S22 Lynn Cadenhead	S22.025	Table 8.4: Target attribute states for rivers.	Support	Supports target attribute states	Retain as notified
S29 Neil Deans	S29.012	Table 8.4: Target attribute states for rivers.	Support	Supports target attribute states	Retain as notified
S31 Stormwater r360	S31.003	Table 8.4: Target attribute states for rivers.	Not Stated	Target attribute states refer to dissolved metals concentration whereas Schedule 28 (Table 1 and Table 2) refer only to the percentage of Copper or Zinc to be removed. Suggest consistency throughout rules/ policies.	Define speciation throughout stormwater rules to achieve TAS defined in Table 8.4. Table 1 and 2 of Schedule 28: Stormwater Contaminant Treatment should reflect dissolved metals.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S33 Wellington City Council	S33.033	Table 8.4: Target attribute states for rivers.	Amend	Considers the 2040 timeframe will be difficult to achieve, and does not take into account the environmental and financial constraints of Wellington City Council. Suggests the 2060 timeframe is consistent with WCC's spatial planning framework, and more consistent with the long-term plan and strategic financing of upgrades and expansions to the three waters network.	Amend timeframe from 2040 to 2060.
S36 Wellington Branch of New Zealand Farm Forestry Association	S36.037	Table 8.4: Target attribute states for rivers.	Not Stated	Notes the use of the suspended fine sediment/visual clarity/black disc test for Mangaroa River does not take into account that Black Stream (natural brown water) drains into Mangaroa River. Seeks confirmation that different TAS have been set where there are natural sources of brown water. Notes the Total Suspended Solids and suspended fine sediment and deposited fine sediment results are high quality, so are at odds with the Visual Clarity result (refers to table in original submission). Seeks confirmation that Wainuiomata/Black Creek has an appropriate TAS set for visual clarity.	Confirm different TAS have been set where there are natural sources of brown water. Check Wainuiomata/Black Creek has appropriate TAS set for visual clarity.
S106 Korokoro Environment Group	S106.001	Table 8.4: Target attribute states for rivers.	Support	Lack of baseline data for Korokoro Stream but considers the high Target Attributes for Korokoro Stream are appropriate. Supports the inclusion of monitoring of Korokoro Stream and the tributary in Galbraiths Gully and seeks to be involved with community participation and information sharing.	Retain as notified (inferred)
S115 Mary Hutchinson	S115.005	Table 8.4: Target attribute states for rivers.	Support	Supports Target attribute states for rivers in Table 8.4	Not stated
S151 Wellington Water Ltd	S151.060	Table 8.4: Target attribute	Oppose	Refers to Section A of submission. Notes a lack of information relating to the baseline state to measure against,	Provide further information on the baseline state and a detailed assessment of the implications of the TAS provisions on a sub-catchment basis.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		states for rivers.		meaning it is not possible to determine whether the TAS parameters and requirements are reasonable, appropriate and achievable. Considers the 2040 timeframe will result in the requirement for a large proportion of sub-catchments (or possibly all of them) to be upgraded in the short term, rendering prioritisation of sub-catchment upgrades meaningless. Refers to comments in relation to specific parameters within Table 8.4.	Alter timeframe to 2060. Include guidance on how to measure the proportion from WWL's networks with inputs from other sources within the catchment. Withdraw the table until the further detail can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151 Wellington Water Ltd	S151.061	Table 8.4: Target attribute states for rivers.	Oppose	<p>Periphyton Biomass</p> <p>1) Notes Periphyton biomass is dependent on a range of environmental and human factors including shading, nutrient concentrations and sedimentation rates. Tackling these factors will require a process to identify the relevant factors and required actions further than those under WWL's control.</p> <p>2) Notes certain sites have a lack of data for the setting of baselines and there is uncertainty whether achieving the TAS by 2040 is realistic and achievable.</p> <p>3) Notes that natural conditions and land uses and activities within the catchment may prevent a TAS being achieved, including shading, stream bed type and channelisation.</p>	<p>Provide further information on the baseline state, and a detailed assessment of the implications of the TAS provisions on a sub-catchment basis.</p> <p>Withdraw the table until the further detail can be added.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>
S151 Wellington Water Ltd	S151.062	Table 8.4: Target attribute states for rivers.	Oppose	<p>E coli</p> <p>Notes there will be other forms of faecal bacteria contamination within catchments, eg. rural inputs (managed through P.P20 & P.P24), on-site wastewater treatment and from birds or dogs.</p>	<p>Include guidance on how to measure the proportion from WWL's networks relative to inputs from other sources within the catchment.</p> <p>Provide further analysis to determine whether improvements are achievable.</p> <p>Withdraw the table until the further detail can be added.</p> <p>Other relief as may be required to address the issues</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>lack of data for the setting of baselines and the required improvements may be unrealistic for these sites by 2040.</p> <p>3) Notes that natural conditions and human land uses and activities within the catchment may prevent a TAS being achieved and this could include through invasive species, the temperature of watercourses, channelization and lack of habitat.</p> <p>4) Once any required improvements have been made to a catchment it can take a period of time for this to be observed in an improvement in macroinvertebrate abundance and diversity (Collier et al., 2002)</p>	
S151 Wellington Water Ltd	S151.065	Table 8.4: Target attribute states for rivers.	Oppose	<p>Suspended fine sediment/deposited fine sediment There is uncertainty regarding the modelled correlation between sediment loads and visual clarity. SedNet is a national scale model which has had to be adjusted to the scale of the target TAS locations. This increased granularity may lead to higher levels of uncertainty.</p> <p>Furthermore, sediment loads, visual clarity and deposited sediment are influenced by factors within catchments outside of WWL's control including human land uses and activities and natural factors.</p>	<p>Consider all contributing sediment sources for setting TAS for visual clarity and deposited sediment and address:</p> <ol style="list-style-type: none"> 1. How sediment load reductions will be measured in the future 2. How would proportionate contribution to sediment be measured and any reduction in this contribution be measured <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>
S151 Wellington Water Ltd	S151.066	Table 8.4: Target attribute states for rivers.	Oppose	<p>Dissolved oxygen mg/L (below point sources only) Considers there is a lack of data for the setting of baselines and the required improvements may be unrealistic for these sites by 2040</p>	<p>Provide guidance on when baseline states will be set and mitigation provided should the set TAS be shown to be unrealistic when a baseline is determined. Withdraw the table until the further detail can be added.</p> <p>Other relief as may be required to address the issues</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					identified, including relief that is alternative, additional or consequential.
S151 Wellington Water Ltd	S151.067	Table 8.4: Target attribute states for rivers.	Oppose	Dissolved organic nitrogen/dissolved reactive phosphorus Considers the assessment of the implications of the TAS requires input from a wide variety of stakeholders and additional assessment.	Withdraw the table until the further detail can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151 Wellington Water Ltd	S151.068	Table 8.4: Target attribute states for rivers.	Oppose	Dissolved copper/dissolved zinc Considers the approach of Policy P.P9 does not recognise the other sources of zinc and copper outside of WWL's control (e.g. zinc roofs, copper based brake disks). Considers the required changes will require an approach outside of WWL's control that will take years and significant investment to enact, and may not have occurred by 2040. Notes the TAS is for dissolved copper and dissolved zinc can be more challenging to remove through stormwater treatment devices than total copper and total zinc.	Amend Policy P.P9 and update table to reflect this. Withdraw the table until the further detail can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151 Wellington Water Ltd	S151.069	Table 8.4: Target attribute states for rivers.	Oppose	Ecosystem metabolism Table 8.4 notes that further monitoring is needed to define the baseline state and develop the attribute state framework	Provide further information on how the Ecosystem metabolism will be monitored and a baseline set is required. Withdraw the table until the further detail can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151 Wellington Water Ltd	S151.070	Table 8.4: Target attribute states for rivers.	Oppose	Ammonia (toxicity) Notes that external factors, such as activities and land use in the catchments may lead to failure of TAS outside of WWL's control.	Include guidance on how to measure the proportion from WWL's networks with inputs from other sources within the catchment. Withdraw the table until the further detail can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Amend others to be 0.3 mg/L (median) for good rivers (type 1 and 4) 0.6 for medium rivers (type 2 and 3) and 1.0 for poor rivers (type 5 & 6). Minimum DIN target should be no higher than 1.0.</p> <p>Clearly define what fish community health as determined by experts actually means.</p> <p>Set higher targets for MCI attributes.</p> <p>Retain 'nuisance macrophytes', 'periphyton cover', mahinga kai, and toxicants attributes from table 3.4.</p> <p>Retain groundwater attributes from table 3.6.</p> <p>Amend table (or add another table) to include target attribute states for habitat and natural form and character using the Habitat Quality / Natural Character Index.</p> <p>Minimum targets should set out a target of maintenance of habitat quality / natural character (e.g., minimum ratio of current: reference condition of 0.85). Amend target timeframe to 2030 and outline date from which maintenance will be continued (as per NPSFM 3.11). If date remains 2040, set out interim states at no longer than 10-year intervals.</p>
S261 Forest & Bird	S261.061	Table 8.4: Target attribute states for rivers.	Amend	<p>Considers it is unclear what river types are covered by each part FMU.</p> <p>Considers periphyton targets should be no higher than 120 mg. Considers nitrate toxicity irrelevant to ecology. Considers there are more ecologically sound values for DIN targets. Considers it unclear how</p>	<p>State river type and class for each of the part FMUs.</p> <p>Set a minimum target state for periphyton biomass for all part FMUs at NPSFM band of 120 mg chl-a (and retain higher targets where included).</p> <p>Amend nitrate toxicity target to be NPSFM 'A' band for</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				fish community health will be determined and how it is different to IBI. Considers MCI targets should be higher to protect ecosystem health. Considers attributes are missing to set out and monitor habitat and natural form and character, as directed by the NPSFM and NRP, noting that sediment is not a sufficient measure of physical habitat alone. Considers interim timeframes of less than 10 years are required where long-term timeframes are set out. Considers groundwater targets are needed. Notes macrophyte targets are missing.	<p>all part FMUs.</p> <p>Retain DIN target states where they are set below 0.3 mg/L. Amend others to be 0.3 mg/L (median) for good rivers (type 1 and 4) 0.6 for medium rivers (type 2 and 3) and 1.0 for poor rivers (type 5 & 6). Minimum DIN target no higher than 1.0.</p> <p>Define fish community health, as determined by experts.</p> <p>Set higher targets for MCI attributes</p> <p>Retain 'nuisance macrophytes', 'periphyton cover', mahinga kai, and toxicants attributes from table 3.4</p> <p>Retain groundwater attributes from table 3.6</p> <p>Amend table (or add another table) to include target attribute states for habitat and natural form and character using the Habitat Quality / Natural Character Index.</p> <p>Minimum targets which set out a target of maintenance of habitat quality / natural character (e.g., minimum ratio of current: reference condition of 1.0).</p> <p>Amend target timeframe to 2030 and outline date from which maintenance will be continued as per NPSFM 3.11. If date remains 2040, set out interim states at no longer than 10-year intervals.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S282 Pat van Berkel	S282.012	Table 8.4: Target attribute states for rivers.	Amend	Seeks addition of 'swimmable days' as a parameter in Table 8.3 as it easily understood by public and encompasses all quality reasons for why a river is not swimmable.	Add a Parameter in Table 8.4, namely "Swimmable Days".

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S285 Civil Contractors New Zealand	S285.016	Table 8.4: Target attribute states for rivers.	Oppose	<p>Suspended fine sediment/deposited fine sediment Notes there is uncertainty regarding the modelled correlation between sediment loads and visual clarity and SedNet is a national scale model which has had to be adjusted to the scale of the target TAS locations. Considers increased granularity may lead to higher levels of uncertainty.</p> <p>Furthermore, sediment loads, visual clarity and deposited sediment are influenced by factors within catchments outside of WWL's control including human land uses and activities and natural factors.</p>	<p>Visual clarity and deposited sediment need to be set taking into consideration all contributing sediment sources, and the following points also need to be addressed:</p> <ol style="list-style-type: none"> 1. How sediment load reductions will be measured in the future 2. How would proportionate contribution to sediment be measured and any reduction in this contribution be measured 3. How much time would the testing take, and who would a 'suitable person' be to conduct the testing? If we do not currently have personnel capacity to conduct this testing, is it wise to write it into the Plan?
S286 Taranaki Whānui	S286.030	Table 8.4: Target attribute states for rivers.	Amend	<p>Supports full restoration of Te-Whanganui-a-Tara's waterways towards wai ora by 2040 but notes significant infrastructure investment is required by 2040 to meet the E.coli target. Submitter is concerned this target will not be achievable with current funding mechanisms. Considers it should be a priority to find new streams of funding that are not reliant on the existing ratepayer base and regular monitoring and reporting on progress towards the target is completed.</p>	<p>Retain objective provided: -Method M45 is implemented as a priority and new infrastructure funding mechanisms are put in place; and -regular monitoring and reporting is undertaken on progress towards the target.</p>
S9 Louise Askin	S9.012	8.2 Policies	Amend	<p>Seeks implementation of WIP recommendation 32 and notes this doesn't appear elsewhere in PC1.</p>	<p>Include a policy on septic tanks in section 8.2.</p>
S22 Lynn Cadenhead	S22.026	8.2 Policies	Support	<p>Supports policies WH.P1-P.33 including the associated target attribute states and flow requirements.</p>	<p>Retain as notified</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S115 Mary Hutchinson	S115.006	8.2 Policies	Support	Supports policies WH.P1 to WH.P33 and any associated target attribute states and flow requirements	Not stated
S177 Transpower New Zealand Limited	S177.019	8.2 Policies	Support	Supports note as it provides for a range of existing operative policies to continue applying within the whaitua.	Retain as notified
S2 Horokiwi Quarries Ltd	S2.018	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	<p>Clause (a) requires a progressive reduction in the load and concentration of contaminants. The submitter understands that this is aligned with the required reductions to achieve improvements in water quality as required by Objective WH.O9. As drafted, the clause implies that this would apply to all water bodies, regardless of whether improvement is required or not. Changes are sought by the submitter to clarify this.</p> <p>Considers clause (b) would be applied broadly to all habitats, including exotic. States there is no requirement under the NPS-FM to restore all habitats, rather it is limited to indigenous wetland habitat, and restoration should only be required where that habitat has been degraded. The submitter seeks changes to clarify that restoration is limited to indigenous habitats and to caveat only to where those habitats have been degraded.</p> <p>Considers clause (d) is unclear about what is being coordinated and prioritised. It is also unclear what "catchments that require changes to land use activities that impact water" means, who decides this, or what those activities are. Suggests this clause should rather refer to enabling work programmes that</p>	<p>Amend Policy WH.P1 as follows: Policy WH.P1: Improvement of aquatic ecosystem health Aquatic ecosystem health will be improved by:</p> <p>(a) progressively reducing the load or concentration of contaminants where improvement in water quality is required, particularly sediment, nutrients, pathogens and metals, entering water, and</p> <p>(b) restoring indigenous habitats that have been degraded, and</p> <p>(c) enhancing the natural flow regime of rivers and managing water flows and levels, including where there is interaction of flows between surface water and groundwater, and</p> <p>(d) co-ordinating and prioritising enabling work programmes in catchments that seek to improve aquatic ecosystem health require changes to land use activities that impact on water.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>provide for improvement.</p> <p>The submitter also notes that clause (d) is a method rather than a policy directive. Suggests that consideration is given to whether this would be better suited as a method rather than a policy directive.</p>	
S33 Wellington City Council	S33.034	Policy WH.P1: Improvement of aquatic ecosystem health.	Support	Consider the policy is reasonable to achieve the improvements to ecosystem health progressively.	Retain as notified.
S101 Wellington International Airport Limited	S101.042	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	<p>Generally supports the intention of this policy but concerned that at an individual consent level, while endeavours are made to achieve (a) to (d), it may not always be practicable given the nature and scale of activities undertaken by regionally significant infrastructure. Considers the policy requires further amendment to recognise the operational and functional requirements of regionally significant infrastructure, consistent with Objective O9 of the NRP, and that as currently drafted the policy will limit the ability of infrastructure providers in the region to meet the needs of the regions communities.</p>	<p>Review the extent to which the policy should apply to sites containing critical infrastructure. Review whether such a policy is appropriate where it is also necessary to utilise natural and physical resources to meet the economic and social needs of Wellington's communities. In the alternative, amend the policy to ensure it considers the extent to which (a) to (d) is practicable in the context of regionally significant infrastructure. Or delete and revert to Operative NRP.</p>
S151 Wellington Water Ltd	S151.072	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	<p>Supports the reference in clause (a) to 'progressively reducing the load' as reflecting the volume of work that needs to be achieved. Notes that under clause (c) not all locations will require enhancement. Seeks that for clause (d), 'work programmes' is defined or a more specific term used to clarify that it does not relate to local authority networks.</p>	<p>Retain clause (a) Replace 'enhancing' with 'maintaining or improving' in clause (c) Define or use a more specific term for 'work programmes' in clause (d) Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Forest Trust		ecosystem health.			
S217 R P Mansell; A J Mansell, & M R Mansell	S217.005	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	Considers the policy does not accurately reflect the objectives on aquatic ecosystem health. Considers that the objectives provide more flexibility than only an "improve" approach.	Improvement of aquatic ecosystem health Aquatic ecosystem health will be maintained or improved where relevant target attribute state is not met by: (a) progressively reducing the load or concentration of contaminants, particularly sediment, nutrients, pathogens and metals, entering water where relevant target attribute state is not met , and (b) maintaining or restoring habitats where relevant target attribute state is not met , and (c) maintaining or enhancing the natural flow regime of rivers and managing water flows and levels where relevant target attribute state is not met , including where there is interaction of flows between surface water and groundwater, and (d) co-ordinating and prioritising work programmes in catchments that require changes to land use activities that impact on water.
S222 Environmental Defence Society Inc.	S222.034	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	To give effect to NPSFM.	Amend (b) to read " restoring habitats and natural form and character ".
S225 Upper Hutt City Council	S225.066	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	Concerned about practicality of working on reducing contaminants all at once.	Seek clarification on whether (a) to (c) is achievable within the ten-year planning cycle or whether some contaminants should be prioritised.
S245 Tama Potaka, Minister of Conservation	S245.002	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	Supports the intent of the policy but it needs to be consistent with NZCPS Policy 23.	Amend Policies to be consistent with NZCPS Policy 23. Requests adding a new paragraph with the following wording(e) reducing contaminant and sediment loadings in stormwater at source, through contaminant treatment and by controls on land use activities.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S258 BP Oil NZ Ltd, Mobil Oil NZ Ltd, Z Energy Ltd - The Fuel Companies	S258.006	Policy WH.P1: Improvement of aquatic ecosystem health.	Support	Supports Policy WH.P1, particularly the recognition in clause (a), that reduction in contaminant loading will be a progressive process.	Retain Policy WH.P1 as notified.
S261 Forest & Bird	S261.062	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	Seeks explicit provision for natural form and character. Seeks inclusion of direction that "enhancement" of flows should be through limits and natural means, rather than "stream augmentation" or managed aquifer recharge.	Amend (b) to read "restoring habitats and natural form and character" Amend (c) to include "by setting limits and reducing allocation volumes in over-allocated catchments, and by restoring natural form and character to promote natural aquifer recharge" Retain balance of policy. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S286 Taranaki Whānui	S286.031	Policy WH.P1: Improvement of aquatic ecosystem health.	Support	Supports progressive reduction of contaminants and restoration of habitats.	Retain as notified.
S288 China Forest Group Company New Zealand Ltd	S288.045	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	Considers the term 'land use' in sub-clause (d) is more associated with rural or primary production land uses. Seeks the inclusion of urban land use as it is a major source of contaminants.	Clarify to include urban land use.
S2 Horokiwi Quarries Ltd	S2.019	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Seeks amendments to clause (a) of this policy as described below. Considers this policy to be inappropriate because the definition of "unplanned greenfield development" is broad and uncertain. On this basis, the submitter considers the prohibition on unplanned	Amend Policy WH.P2 as follows: Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives: Target attribute states and coastal water objectives will be achieved by regulating discharges and land use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by: (a) prohibiting unplanned greenfield development and

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>greenfield development inappropriate.</p> <p>It is understood by the submitter that GWRC are focused primarily on unplanned urban development. The submitter seeks changes to this clause to clarify this. Considers this clause also currently prescribes the activity status of an activity, rather than being focused on an adverse effect.</p> <p>Considers financial contributions to offset residual adverse effects from stormwater contaminants is inconsistent with the NPS-FM and limits the ability to implement the effects management hierarchy. Suggests aquatic offsetting or aquatic compensation is required where there are more than minor residual adverse effects, rather than residual adverse effects generally. The submitter expects there will be some residual adverse effect, which is appropriate, provided that the effect is no more than minor.</p> <p>Considers this clause implies that financial contributions are the only form of offset that may be provided. Suggest that as Appendix 6 of the NPS-FM sets out principles that are to be applied when identifying an appropriate aquatic offset, it would be contrary to the NPS-FM to not allow for consideration against those principles.</p> <p>Considers that whilst the clause implies that only offsetting may be applied, the effects management hierarchy provides for aquatic compensation where aquatic offsetting is not able to be provided. The</p>	<p>for other greenfield developments minimising the discharge of stormwater contaminants generated by urban development, and where there are more than minor residual adverse effects caused by stormwater contaminants requiring aquatic offsetting in first instance, which may include a requiring financial contributions as to an aquatic offset adverse effects from residual stormwater contaminants; and</p> <p>(b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and</p> <p>(c) imposing hydrological controls on urban development and stormwater discharges to rivers</p> <p>(d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and</p> <p>(e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation where practicable, and</p> <p>(f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and</p> <p>(g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and</p> <p>(h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>submitter accepts that a financial contribution may be an appropriate form of aquatic offset, but seeks that the policy does not frustrate the ability for other forms of aquatic offsetting or aquatic compensation to be undertaken.</p> <p>Supports the direction of Clause (e), but notes that the planting of riparian margins may not always be practicable. Changes are sought to recognise this.</p>	
S9 Louise Askin	S9.013	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Notes other sections of PC1 do not drive total stock exclusion from all waterways, but instead apply practical assessments that allow for other methods.	Amend as follows: " excluding livestock from waterbodies " to " reducing livestock access to waterbodies ".
S18 PF Olsen Ltd	S18.022	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	<p>Seeks clarification on the purpose of target attribute states which regulate forestry activities. Considers that forestry activities are disproportionately restricted compared to pastoral activities, citing studies.</p> <p>Questions restrictions on tree planting near water bodies, noting that research indicates trees to have positive impacts on water quality. Further questions restrictions on non-take use of rainfall by commercial forestry compared to pasture, citing a local study. Questions restrictions on reforestation in light of the rarity of landslides and debris flow in commercial forest settings in the Wellington region. Cites studies which suggest that forests exhibit significant rainfall retention compared to pasture, acting as water storage during winter and releasing rainfall as low flows in drier</p>	Exclude forestry activities.

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				months. Seeks greater consistency and scientific evidence for proposed rules on forestry activities near water bodies. Notes that the s32 report states that the NES-CF has not been taken into consideration. Suggests a review of proposed legislative changes, to consider existing NES-CF regulations, research findings, and the impending National Framework. Considers aligning policies with these standards will develop consistently aligned and sustainable policies for forestry activities in the region.	
S33 Wellington City Council	S33.035	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Concerns regarding the prohibitive provisions framework and if it the most appropriate to achieve the objectives and policies of the NPS-FM 2020. Considers the prohibited activity status is not demonstrated through the s32 report as the most appropriate option to achieve the objectives of the plan, and that a Discretionary Activity status is more appropriate. Notes that as per case law prohibited activity class should not be used to defer an evaluation of a particular activity until such time as a plan change is lodged to allow undertaking the activity in question. Considers the District Plan is the most appropriate tool to manage urban development as set out in s3.5(4) of the NPS-FM 2020. Recommends that for development connected to the local authority stormwater networks, GWRC sets out the reduction requirements in the s15 global stormwater discharge consent via the stormwater management strategy and Territorial Authorities then implement the regulatory aspects of the stormwater management strategy	Amend as follows: Target attribute states and coastal water objectives will be achieved by regulating discharges and land use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by: (a) prohibiting unplanned greenfield development for other greenfield developments minimising the contaminants and requiring contaminants and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and (b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and (c) imposing hydrological controls on urban development and stormwater discharges to rivers (d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, through stormwater management strategies and...

				through land use consents in the District Plan.	
S38 Summerse t Group Holdings Limited	S38.005	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	<p>Opposes prohibiting unplanned greenfield growth.</p> <p>Concerned the activity status will provide no consenting pathway for proposals located in these areas that may have positive/better outcomes for the community, freshwater and intensive rural activities.</p> <p>Considers the prohibited activity status to be inappropriate in terms of effects management and unjustified by the Section 32 Evaluation which states that all contaminants can be mitigated with a combination of treatment and the use of financial contributions (refer paragraph 64 of Part C).</p> <p>Considers the prohibited activity status to be inconsistent with Policy 8 of the NPS-UD.</p> <p>Based on the S32 report, the submitter assumes the purpose of the prohibited activity status is to require both a regional and district plan change to enable greenfield development. Concerned the two plan changes will make it difficult for the market to be responsive to providing housing, be expensive and impact the economic viability of development.</p> <p>Concerned these impacts on housing supply have not been sufficiently assessed in the Section 32 Evaluation.</p>	<p>Amend policy:</p> <p>Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives will be achieved by regulating discharges and land-use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by:</p> <p>(a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and</p> <p>(b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and</p> <p>(c) imposing hydrological controls on urban development and stormwater discharges to rivers, and</p> <p>(d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and</p> <p>(e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and</p> <p>(f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and</p> <p>(g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and</p> <p>(h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S101 Wellington International Airport Limited	S101.043	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	<p>Considers the proposed policy is unduly onerous and blunt insofar as discharges and land use management are concerned and the chapeau of the policy needs to clarify that the target attribute states apply to freshwater only while the coastal water objectives apply to coastal water.</p> <p>Notes the definition of "unplanned greenfield development" makes reference to the undefined term "greenfield development" and "other greenfield development" and certainty is required around what is / is not captured by this policy.</p> <p>Considers it is not clear whether (a) would extend to infrastructure (such as Wellington Airport) or one-off developments for which resource consent can be sought.</p> <p>Considers if (a) were to apply to designations, it would render a well established and utilised tool under the RMA nugatory.</p> <p>Notes a proposal of WIAL to establish a small community precinct within an area of Open Space zoned land on Lyall Parade would effectively be prohibited under (a), despite the positive outcomes, including for the indigenous vegetation on site.</p> <p>Considers it is not clear what methods within the plan "encourage" redevelopment of existing urban areas.</p> <p>Considers it is not clear whether limb (c) relates to urban development which gives rise to stormwater discharges not otherwise discharging to rivers.</p>	Amend the policy to address the issues raised. Or delete and revert to Operative NRP.
S116 Taumata Arowai	S116.029	Policy WH.P2 Management of activities to	Amend	Notes policies and rules that establish requirements for wastewater and stormwater networks provide clarity to	Provisions that interface with complementary Taumata Arowai duties and powers are well aligned, efficient and effective, and unnecessary duplication is avoided.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		achieve target attribute states and coastal water objectives.		network operators and will have a bearing on the quality and quantity of contaminant discharge. Considers that complementary provisions between the RMA, WSA and WSEA are well aligns, efficient, effective, and duplication is avoided where possible. Suggests a solution may be signalling the relationship between the different legislative requirements and how a single product (e.g. a stormwater management strategy) might be developed, reviewed and implemented, to meet both.	
S151 Wellington Water Ltd	S151.073	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Refers to Section A of submission. Notes there is a lack of information relating to the baseline state to measure against so it is not possible to determine whether the TAS and CWO parameters and requirements are reasonable, appropriate and achievable. Considers it unclear how the TAS, CWO and Freshwater Action Plans will impact upon sub-catchment prioritisation of improvements required for stormwater and wastewater discharges. Considers clause (b) is too vague and should clearly state that redevelopment in existing urban areas will be encouraged noting this provides opportunities to reduce the existing contaminant load, and redevelopment will be required to reduce the existing contaminant load. Considers clause (c) should make allowance for stormwater discharges that are not creating streambank erosion.	Clarify how the FAP provisions will work alongside existing TAS provisions, network discharge consent provisions, and in particular Schedules 31 and 32. Provide clarity over relationship between 'non-regulatory methods' and 'work programmes'. Amend policy to the extent necessary to appropriately reflect these interrelationships. Amend provision as follows: (b) encouraging and where appropriate, requiring that redevelopment activities within existing urban areas to shall reduce the existing urban contaminant load, and (c) imposing hydrological controls on: (i) urban development and (ii) where appropriate and practicable, stormwater discharges to rivers in relation to streambank erosion Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S161 GILLIES GROUP	S161.011	Policy WH.P2 Management of activities to achieve target	Amend	Opposes provisions for unplanned greenfield growth as the prohibited activity status does not provide a consenting pathway to consider a	Amend policy as follows and make any other consequential relief necessary to give effect to this submission point:

				<p>greenfield development is inconsistent with the NPS-UD, particularly Policy 8, and may conflict with the submitter's ability to give effect to the NPS-UD.</p> <p>Notes commentary provided in the s32 report which states that unplanned greenfield development is to be prohibited to enable a future regional plan change alongside a district plan change. Considers that there will be a high economic cost to undertake two simultaneous plan changes, which is not sufficiently assessed in the s32 report.</p> <p>Seeks that this policy direction is amended to "avoid", with a non-complying activity status. Considers that Policy WH.P2(b) is not consistent with and duplicates (c) and (d), noting that the use of "encouraging" in (b) is inconsistent with "imposing" in (c) and "requiring" in (d).</p>	<p>(c) imposing hydrological controls on urban development and stormwater discharges to rivers</p> <p>(d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and</p> <p>(e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and</p> <p>(f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and</p> <p>(g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and</p> <p>(h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater</p>
S213 Pareraho Forest Trust	S213.016	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Support	Not stated	Retain as notified
S216 Te Rūnanga o Toa Rangatira (Te Rūnanga)	S216.005	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	<p>Considers the intention of Policy WH.P2(a), Policy WH P.P15 and associated provisions is to restrict urban development that is ad hoc and uncoordinated to minimise water quality impacts, lack of stormwater infrastructure and other environmental effects.</p> <p>Supports a dedicated planning approach to development in the Wellington Region.</p>	<p>Clarify the provisions relating to 'unplanned greenfield development' and the type of activities that would be captured by this rule and the appropriate rule category. Submits that the plan change should be amended to provide a more balanced and nuanced approach with regard to managing the tension between restricting urban sprawl and provision for practical flexibility for development in non-urban areas.</p> <p>Amend WH.P2(a) to state: Restricting prohibiting unplanned greenfield development and for other</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Considers urban sprawl should be avoided when it results in poor environmental outcomes. Considers there a need to clarify the provisions relating to 'unplanned greenfield development' and the type of activities captured by this rule and the appropriate rule category.</p> <p>Notes that Under the Ngāti Toa Rangatira Deed of Settlement Act 2014, land has been returned or acquired by Ngāti Toa Rangatira under the Right of First Refusal or other processes. These lands may involve historical legacy zones or activities which have been inherited from previous owners or land uses, such as former education and corrections facilities. Considers while new development will aim to achieve high standards of wastewater and stormwater disposal in terms of Water Sensitive Urban Design systems, there could be unanticipated challenges relating to existing (historical) infrastructure, buildings and related additions or alterations that may trigger the unplanned greenfield development rule.</p> <p>Considers similar issues may exist for areas where resource consents have been granted for activities in unplanned greenfield development areas but the zoning has yet to reflect existing activity. For example, upgrades to facilities in rural areas that could trigger the unplanned greenfield development rule. Notes this upgrades may not justify the expense and time of a private plan change process.</p>	<p>greenfield developments minimising the contaminants and requiring financial contributions as to offset adverse effects from residual stormwater contaminants.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Considers a strong alignment between the provisions of the district plans and NRP is needed when signalling land that may potentially become part of future urban development areas. For example, the NPR maps 86-89 may become 'out of date' due to district plan reviews. Considers this may require a two plan change process (an update to the relevant maps of the NRP and the district plan zoning).	
S217 R P Mansell; A J Mansell, & M R Mansell	S217.028	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend Oppose	Considers that the use of the prohibited activity status for unplanned greenfield development is inappropriate, as the effects are not specified for any particular area. Considers this proposed approach is onerous, costly and will not achieve implementation of the NPS-UD. Considers that the current rules of the NRP and the proposed PC1 rules for planned greenfield development are sufficient to manage the adverse effects of unplanned greenfield development. Seeks for provisions which avoid or prohibit activities associated with unplanned greenfield development to be deleted.	Delete policy –Delete reference to prohibiting 'unplanned greenfield development' within Policy (i.e. delete clause (a)). Delete or reclassify the prohibited activity status for stormwater discharge activities associated with 'unplanned greenfield development'
S219 Cuttriss Consultant s Ltd	S219.009	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	Opposes prohibited policy and rules. Concerned prohibiting activities can lead to perverse outcomes (experienced with the NES-FW) as there is no consenting pathway to consider proposals that have a net positive impact on the environment, including freshwater and coastal systems.	Amend policy to remove reference to prohibiting unplanned greenfield development. (a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants.
S220 Rosco Ice Cream Ltd	S220.010	Policy WH.P2 Management of activities to achieve target attribute states	Oppose	Notes one of the stated policy methods is to prohibit unplanned greenfield development and therefore opposes this policy.	Amend the policy to restrict discharges from unplanned greenfield development.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		and coastal water objectives.			
S222 Environmental Defence Society Inc.	S222.035	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	To give effect to NPSFM.	Amend (f) to require avoidance of significant adverse effects from earthworks, forestry and vegetation clearance activities. Support removal of stock from waterbodies and the coastal environment.
S225 Upper Hutt City Council	S225.067	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	<p>Opposes prohibition of development, as it limits options to give effect to NPS-UD and overrides District Plan changes and reviews currently underway or proposed in future.</p> <p>Considers greenfield development has more opportunity to address effects, particularly given space available to incorporate design and infrastructure solutions when compared to constrained urban environments.</p> <p>Notes prohibition in policy, and direction in objective above it, would render a future plan change an impossibility as it wouldn't implement higher order documents. Considers the section 32 analysis would need to consider provisions PC1 and recent changes to NRP and therefore would be at risk of being contrary to objectives and policies in these plans.</p>	<p>Seek that the policy is amended to read:</p> <p>...</p> <p>"(a) prohibiting managing unplanned greenfield development and for other greenfield developments minimising the contaminants and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and"</p>
S226 Higgins Contractors Limited	S226.004	Policy WH.P2 Management of activities to achieve target attribute states and coastal	Amend	<p>Not opposed to Policy WH.P2 in principle and supports fresh and coastal water quality improvements</p> <p>Opposes methods regulating discharge in policy including (c) requiring extensive hydrological controls for small sites and</p>	<p>Remove the imposition of hydrological controls under (c), or amend wording to have regard to hydrological controls, rather than the imposition of such.</p> <p>Remove requirement of a reduction in contaminant load from stormwater network, or amend to include provisions or small site development discharges.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		water objectives.		(d) imposing requirements for stormwater management strategies or impact assessments from all networks.	
S236 Parkvale Road Limited	S236.006	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Opposes approach towards unplanned greenfield development and seeks amendments to the policy that still provides for stormwater quality matters to be addressed appropriately.	Amend the policy as follows: Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives will be achieved by regulating discharges and land-use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by: (a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants , and (b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and (c) imposing hydrological controls nonurban development and stormwater discharges to rivers, and (d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and (e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and (f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and (g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and (h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.
S245 Tama Potaka, Minister of	S245.003	Policy WH.P2 Management of activities to achieve target attribute states	Amend	Supports the intent of the policy but it needs to be consistent with NZCPS Policy 23.	Amend Policies to be consistent with NZCPS Policy 23. Requests the following wording be added Promoting

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Conservation		and coastal water objectives.			design options that reduce flows to stormwater reticulation systems at source.
S246 Water New Zealand	S246.031	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Support	Generally supportive of policy and the clauses to achieve the policy.	Not stated
S247 Carrus Corporation Ltd	S247.009	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	Opposes prohibited policy and rules. Concerned prohibiting activities can lead to perverse outcomes (experienced with the NES-FW) as there is no consenting pathway to consider proposals that have a net positive impact on the environment, including freshwater and coastal systems.	Amend policy to remove reference to prohibiting unplanned greenfield development. (a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants.
S248 Ara Poutama Aotearoa the Department of Corrections	S248.020	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Considers policy is inappropriate because definition of "unplanned greenfield development" is broad, uncertain, and could prohibit maintenance, upgrading and development of regionally significant infrastructure. Considers prohibition on unplanned greenfield development is inappropriate and must be removed. If relief sought by submitter on the definition of "unplanned greenfield development" is granted in full, submitter would adopt a neutral position on this aspect of policy. Considers amendment to policy is necessary to ensure it is consistent with effects management hierarchy set out in NPS-FM. Aquatic offsetting is only necessary where residual adverse effects are more than minor, and	Amend as follows: Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives Target attribute states and coastal water objectives will be achieved by regulating discharges and land use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by: (a) prohibiting unplanned greenfield development and for other greenfield developments minimising the discharge of stormwater contaminants from greenfield development, and where residual adverse effects from the discharge of stormwater contaminants are more than minor, requiring aquatic offsetting or compensation (which may include financial contributions) as to offset adverse effects from residual stormwater contaminants, and (b) encouraging redevelopment activities within existing urban areas to reduce the existing urban

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				resource consent applicants should be encouraged to minimise residual adverse effects so they are no more than minor (in which case aquatic offsetting is not required). Considers if aquatic offsetting is required, financial contributions as proposed by PC1 should be available as a discretionary option for achieving offsetting, but not a mandatory requirement. If applicants can provide alternative effective methods of aquatic offsetting as part of proposal in accordance with Appendix 6 of NPS-FM, then financial contributions should not be required.	contaminant load, and (c) imposing hydrological controls on urban development and stormwater discharges to rivers (d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and (e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and (f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and (g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and (h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.
S251 Peka Peka Farm Limited	S251.005	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Opposes approach towards unplanned greenfield development and requests amendments whilst still providing for stormwater quality matters to be addressed appropriately. Requests amendment that addresses opposition to the proposed financial contribution regime.	Amend the policy as follows: Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives Target attribute states and coastal water objectives will be achieved by regulating discharges and land-use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by: (a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and (b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and (c) imposing hydrological controls on urban development and stormwater discharges to rivers, and (d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and (e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					(f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and (g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and (h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.
S252 Thames Pacific	S252.009	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	Opposes prohibited policy and rules. Concerned prohibiting activities can lead to perverse outcomes (experienced with the NES-FW) as there is no consenting pathway to consider proposals that have a net positive impact on the environment, including freshwater and coastal systems.	Amend policy to remove reference to prohibiting unplanned greenfield development. (a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants,
S256 Waste Management NZ Limited	S256.009	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	Opposes the policy direction to prohibit unplanned greenfield development. Considers discharges from unplanned greenfield development may be able to be managed and have an acceptable effect and not all discharges from unplanned greenfield development areas need to be avoided to achieve target attribute states. Considers each proposal requires assessment on a case by-case basis. Considers 'restricting' discharged would better achieve the intent of higher order documents.	Amend Policy WH.P2(a) as follows: Target attribute states and coastal water objectives will be achieved by regulating discharges and land use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by: (a) restricting avoiding discharges from unplanned greenfield development and for other greenfield developments minimising the contaminants and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and Any other relief or consequential amendments necessary to address the concerns set out in this submission.
S257 Kāinga Ora	S257.011	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	Generally supports the intent of this policy, but opposes reference to prohibiting unplanned greenfield development at WH.P2(a). Reasons for this are discussed in submission on the relevant policy and rule framework specific to unplanned greenfield development.	Remove reference to prohibiting unplanned greenfield development at WH.P2(a). Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Would support an extended timeline for the achievement of meeting the TAS.	
S258 BP Oil NZ Ltd, Mobil Oil NZ Ltd, Z Energy Ltd - The Fuel Companies	S258.007	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Support	Supports Policy WH.P2, particularly Clause (b), which only encourages redevelopment activities to reduce contaminant load. Considers this recognises that in some cases, best practice measures may already be in place such that further reduction may not be practicable, or appropriate in context of nature and scale of the particular redevelopment activity. Supports the network scale approach taken to reduction in contaminant loads in Clause (d)	Retain Policy WH.P2 as notified.
S260 Cannon Point Development Limited (Ltd.)	S260.004	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Considers PC1 objectives do not warrant the prohibition of unplanned greenfield development as it would foreclose any opportunity to manage effects to achieve Target Attribute States and coastal water objectives. Suggests an effects management approach would better allow for the competing directives of the NPS-FW and NPS-UD to be resolved.	Amend as follows if definition of Unplanned Greenfield Development is not deleted: " (a) Prohibit Encourage prohibiting unplanned and other greenfield development and for other greenfield developments minimising the to minimise contaminants and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and"
S261 Forest & Bird	S261.063	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Supports prohibition of unplanned greenfield development, however opposes clause (a). Considers financial contributions as compensatory measures for stormwater contamination contrary to RMA s107, the NZCPS, and the effects management hierarchy under the NPSM. Considers financial contributions are not an "offset". Considers livestock should be excluded from ephemeral watercourses, estuaries and wetlands, as they have high ecological value. Considers additional direction is required	Amend (a): prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants and requiring financial contributions as to offset adverse effects from residual stormwater contaminants so that adverse effects are avoided Amend clause (e) so that it refers to ephemeral watercourses, wetlands and estuaries. Add clause:(i) land use intensification that individually or cumulatively may lead to a decline in water quality is prohibited

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				to give clear scope for managing rural land uses.	Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S262 Southern North Island Wood Council	S262.013	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	Considers the rules of PC1 should not override the NES-CF. Seeks that Rules P.R19, P.R20, P.R21, WH.R20, WH.R21 and WH.R22 are deleted, including associated notes which state that rules prevail over the NES-PF. Objects to any other rules which would substitute those of the NES-PF. Objects to the inclusion of forestry activities in Policies WH.P2, P.P2, WH.P28 and P.P26. Seeks that replanting is not regulated in PC1.	<p>Remove proposed forestry related changes, i.e. P.R19, P.R20 and P.R21, as well as Rules WH.R20, WH.R21 and WH.R22 and also the detailed notes that these new rules prevail over certain rules in the NES-PF.</p> <p>Object to any other substitution of rules in the NES-PF with new rules in the plan.</p> <p>Remove policies WH.P2 , P.P2, WH.P28 and policy P.P26 as far as they relate to forestry.</p> <p>Seek that replanting will not to be regulated in the plan.</p>
S286 Taranaki Whānui	S286.032	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	<p>Concerned policy and provisions will impose significant costs and impact the ability of Taranaki Whānui whanau to develop their ancestral lands. Notes land not yet returned to Māori ownership through treaty settlements, includes many sites in areas mapped as "unplanned greenfield land" including rural and open space land. Considers prohibition on developing these lands inconsistent with principles of Te Tiriti and inconsistent with need to provide for broader housing affordability and innovation on both Māori and all other land.</p> <p>Considers planning processes need to be flexible to ensure aspirational outcomes are achieved.</p> <p>Seeks freshwater effects of development of these sites are addressed through a</p>	<p>Amend policy:</p> <p>Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives. Target attribute states and coastal water objectives will be achieved by regulating discharges and land use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by:</p> <p>(a) prohibiting unplanned greenfield development and for managing other greenfield developments by minimising the contaminants and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and</p> <p>(b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and</p> <p>(c) imposing hydrological controls on urban development and stormwater discharges to rivers</p> <p>(d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and</p> <p>(e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

				regional consent process rather than a regional plan change.	indigenous vegetation, and (f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and (g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and (h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.
S288 China Forest Group Company New Zealand Ltd	S288.046	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Regarding clause (f), notes the specified activities are already actively managed and seeks amendment to reflect management in accordance with established regulatory frameworks and good practice. Suggests similar amendments can be applied for clause (h), noting farm plans themselves are not actions that improve water quality, but are a means to describe good practice, regulations and actions to be applied to a site.	Amend clause (f) to reflect management of specified activities in accordance with established regulatory frameworks and good practice. Consider similar amendments for clause (h).
S9 Louise Askin	S9.014	Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of waterways.	Amend	Reference that WIP recommendations 10 and 13 state need for communities to be involved in catchment planning. Considers it unclear whether FWAP are intended to replace catchment plans. Presumes not a replacement due to being larger scale. Considers if FWAP are to include on-farm actions, then it should be essential that farmers and rural communities are key partners in development.	Include the rural community in the development of Action Plans.
S18 PF Olsen Ltd	S18.023	Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of waterways.	Amend	Considers consultation with scientific experts, the community, and primary industries will ensure comprehensive decision-making.	Amend to seek partnership with mana whenua, the local community and primary industry.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S33 Wellington City Council	S33.036	Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of waterways.	Amend	Support in part. Consider it appropriate for Freshwater Action Plans to be developed cooperatively with Mana Whenua and territorial authorities to give effect to 3.5(3) of the NPS-FM 2020.	Amend as follows: Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of waterways The Wellington Regional Council shall, in partnership with mana whenua and local territorial authorities , to prepare and deliver Freshwater Action Plans in accordance with Schedule 27 (Freshwater Action Plan)
S116 Taumata Arowai	S116.030	Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of waterways.	Support	Notes managing stormwater and wastewater discharges is important to Māori. Supports acknowledgment of Māori customary practice and use of wai, the partnership role of mana whenua in developing freshwater action plans, and acknowledgment of the need to engage with mana whenua in rules for discharges of wastewater and stormwater.	Retain as notified (except as requested to be amended by mana whenua).
S151 Wellington Water Ltd	S151.074	Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of waterways.	Amend	Refers to Section A of submission. Considers it unclear how FAPs are intended to operate alongside other provisions within the plan change, Wellington Water stormwater and wastewater network discharge consents, and in general Wellington Water's network operations. Notes that the current provisions for FAPs, although a non-regulatory 'other method', could be read to have some level of influence in relation to wastewater and stormwater network discharge consents and prioritisation of sub-catchments. Considers that there should be no relationship between the contents of an FAP and the scheduled requirements for network discharge consents.	Clarify how the FAP provisions will work alongside existing TAS provisions, network discharge consent provisions, and in particular Schedules 31 and 32. Amend policy to the extent necessary to appropriately reflect these interrelationships. Clarify what is intended for the level of consideration or influence that any FAP could have on wastewater and stormwater network discharge consents. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Company New Zealand Ltd		clarity target attribute states.		sub-catchment to determine the primary cause of poor clarity. Therefore considers action to achieve the outcome may be mis-targeted.	
S18 PF Olsen Ltd	S18.025	Table 8.5: Sediment load reductions required to achieve the visual clarity target attribute states.	Amend	Considers the setting of the proposed target attribute states has not been consistent with 3.11(8) of the NPS-FM. Considers there is a lack of due consideration given to the environmental outcomes, target attribute states of receiving environments, and connections between water bodies, as required by the clause. Questions the effectiveness of the proposed target attribute states and considers that they do not reflect an adequate understanding of environmental outcomes. Questions the use of freshwater accounting systems to inform the setting of target attribute states and emphasises the importance of accurate and up-to-date information.	Revise target attribute states in accordance with Clause 3.11(8) of the NPS-FM.
S33 Wellington City Council	S33.038	Table 8.5: Sediment load reductions required to achieve the visual clarity target attribute states.	Amend	Considers the 2040 timeframe will be difficult to achieve, and does not take into account the environmental and financial constraints of Wellington City Council. Suggests the 2060 timeframe is consistent with WCC's spatial planning framework, and more consistent with the long-term plan and strategic financing of upgrades and expansions to the three waters network.	Amend timeframe from 2040 to 2060.
S151 Wellington Water Ltd	S151.076	Table 8.5: Sediment load reductions required to achieve the visual clarity target attribute states.	Amend	Refers to Section A of submission. Considers a detailed assessment of the implications of the TAS provisions is required on a sub-catchment basis to determine appropriateness of the requirements and 2040 timeframes, and implications for sub-catchment prioritisation. Considers further assessment is needed	Refer to Section A overarching submission points. Amend timeframe to 2060 Set TAS for visual clarity and deposited sediment by taking into consideration all contributing sediment sources, and address the following points: 1. How sediment load reductions will be measured in the future 2. How would proportionate contribution to

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>to address uncertainty regarding the modelled correlation between sediment loads and visual clarity.</p> <p>Notes that SedNet is a national scale model which has had to be adjusted to the scale of the target TAS locations and this may lead to higher levels of uncertainty.</p> <p>Notes that sediment loads, visual clarity and deposited sediment are influenced by factors within catchments outside of WWL's control including human land uses and natural factors.</p>	<p>sediment be measured and any reduction in this contribution be measured</p> <p>Withdraw the table until the further detail can be added.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>
S183 Yvonne Weeber	S183.194	Table 8.5: Sediment load reductions required to achieve the visual clarity target attribute states.	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.106	Table 8.5: Sediment load reductions required to achieve the visual clarity target attribute states.	Support	Not stated	Not stated
S193 Wairarapa Federated Farmers	S193.071	Table 8.5: Sediment load reductions required to achieve the visual clarity target attribute states.	Oppose	Certain of the national bottom lines are aspirational, including for Makara and Mangaroa; and baseline sediment loads are uncertain	<p>Delete Table 8.5</p> <p>Make any consequential amendment(s) necessary to give effect to the relief sought.</p>
S222 Environmental	S222.038	Table 8.5: Sediment load reductions	Amend	Gives effect to NPSFM.	Amend 2040 to 2030 to reflect the urgency of addressing freshwater issues and the biodiversity crisis.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Defence Society Inc.		required to achieve the visual clarity target attribute states.			
S257 Kāinga Ora	S257.013	Table 8.5: Sediment load reductions required to achieve the visual clarity target attribute states.	Neutral	Generally supports but would support an extended timeline for the achievement of meeting the TAS.	Amend to reflect an extended timeline for the achievement of TAS which takes into consideration the feasibility and cost of achieving the prescribed timeframes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S261 Forest & Bird	S261.066	Table 8.5: Sediment load reductions required to achieve the visual clarity target attribute states.	Amend	Notes the NPSM requires interim timeframes for Target Attribute States of no more than 10 years.	Shorten timeframes to 2030 or provide interim goals Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S286 Taranaki Whānui	S286.035	Table 8.5: Sediment load reductions required to achieve the visual clarity target attribute states.	Support	Support in principle.	Retain as notified.
S33 Wellington City Council	S33.039	Policy WH.P5: Localised adverse effects of point source discharge.	Amend	Oppose in part. Considers the use of 'avoid or minimised' to be conflicting and unworkable. More appropriate for the effects to be minimised as all effects cannot be avoided.	Amend as follow: The localised adverse effects of point source discharges to freshwater and coastal water beyond the zone of reasonable mixing are avoided or minimised, including by avoiding reducing :
S101 Wellington International Airport Limited	S101.044	Policy WH.P5: Localised adverse effects of point source discharge.	Support	Considers the policy intent is generally consistent with restrictions on the grant of certain discharges under section 107 of the RMA.	Retain as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S183 Yvonne Weeber	S183.195	Policy WH.P5: Localised adverse effects of point source discharge.	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.107	Policy WH.P5: Localised adverse effects of point source discharge.	Support	Not stated	Not stated
S188 Wellington Fish and Game Regional Council	S188.043	Policy WH.P5: Localised adverse effects of point source discharge.	Not Stated	Questions if this includes through increasing algal / macrophyte growth which removes O2 at night, or substrate infill from inputs from point source discharges too? If so, considers this should be explicitly mentioned where appropriate in the NRP	Seeks mention of 'increasing algal / macrophyte growth which removes O2 at night, or substrate infill from inputs from point source discharges' if considered applicable.
S193 Wairarapa Federated Farmers	S193.072	Policy WH.P5: Localised adverse effects of point source discharge.	Amend	Amend for improved clarity	Amend chapeau to read " including by avoiding or minimising " Make any consequential amendment(s) necessary to give effect to the relief sought.
S206 Winstone Aggregates	S206.037	Policy WH.P5: Localised adverse effects of point source discharge.	Amend	Considers the policy implies clauses (a)- (e) must be avoided even within the mixing zone. Considers this is not a realistic requirement, as any discharge can cause at least one of those effects at a localised level. Seeks changes to clarify the policy focus on limiting those effects to the mixing zone, and avoiding significant adverse effects beyond the zone of reasonable mixing.	Amend policy as follows: Policy WH.P5: Localised adverse effects of point source discharge The localised adverse effects of point source discharges to freshwater and coastal water are as far as practicable retained within beyond the zone of reasonable mixing. are avoided or minimised Significant adverse effects beyond the zone of reasonable mixing must be avoided , including by avoiding the following effects : (a) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials, or (b) any conspicuous change in colour or visual clarity, or (c) any emission of objectionable odour, or (d) the rendering of freshwater unsuitable for consumption by farm animals, or

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					(e) any significant adverse effects on aquatic life including through: (i) change in temperature, or (ii) reduced dissolved oxygen in surface water bodies, or (iii) increased toxicity effects.
S225 Upper Hutt City Council	S225.070	Policy WH.P5: Localised adverse effects of point source discharge.	Amend	Concerned current drafting is unclear and requires redrafting.	Amend to read: "... The localised adverse effects of point source discharges to freshwater and coastal water beyond the zone of reasonable mixing are avoided or minimised, including by avoiding : (a) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials, or (b) ..."
S245 Tama Potaka, Minister of Conservation	S245.004	Policy WH.P5: Localised adverse effects of point source discharge.	Amend	Supports the intent of the policy but it needs to be consistent with NZCPS Policy 23.	Amend Policies to be consistent with NZCPS Policy 23. Requests a new part which includes the relevant criteria from NZCPS Policy 23 (1). Wording proposed is as follows: and by: (f) using the smallest mixing zone necessary to achieve the required water quality in the receiving environment; and (g) minimising adverse effect on the life-supporting capacity of water within a mixing zone.
S258 BP Oil NZ Ltd, Mobil Oil NZ Ltd, Z Energy Ltd - The Fuel Companies	S258.008	Policy WH.P5: Localised adverse effects of point source discharge.	Support	Supports Policy WH.P5 as it appropriately recognises that adverse effects are to be considered beyond the zone of reasonable mixing	Retain Policy WH.P5 as notified.
S261 Forest & Bird	S261.067	Policy WH.P5: Localised adverse effects of point source discharge.	Oppose	Considers the policy too narrow, noting it repeats matters from RMA s70, which is not limited to point sources discharges. Seeks the policy is broadened to capture all discharges.	Policy WH.P5: Localised adverse effects of point source discharge The localised adverse effects of point source discharges to freshwater and coastal water beyond the zone of reasonable mixing are avoided or minimised, including by avoiding:

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S286 Taranaki Whānui	S286.036	Policy WH.P5: Localised adverse effects of point source discharge.	Support	Support in principle.	Retain as notified.
S33 Wellington City Council	S33.040	Policy WH.P6: Cumulative adverse effects of point source discharges.	Amend	Oppose in part. Considers the use of 'avoid' to be unworkable and difficult to enforce, particularly for cumulative adverse effects.	Amend as follows: The cumulative adverse effects of point source discharges, excluding stormwater network and wastewater discharges, to water are avoided minimised and:
S43 Fulton Hogan Ltd	S43.008	Policy WH.P6: Cumulative adverse effects of point source discharges.	Oppose	Supports the improvement of water quality and the recognition of cumulative effects. However, considers cumulative effects difficult to manage and therefore seeks for the policy to allow for cumulative effects to be managed as well as avoided. Also seeks for the recognition of sites that are already operating at "good management practice", and that requirements are to apply at the stage of re-consenting.	Policy WH.P6: Cumulative adverse effects of point source discharges The cumulative adverse effects of point source discharges, excluding stormwater network and wastewater discharges, to water are avoided or minimised and: (a) any new discharge is inappropriate if contaminants in the discharge would cause the affected freshwater body to decline in relation to the target attribute state(s) for that part Freshwater Management Unit(s) and/or coastal water objective(s), and (b) all existing discharges in part Freshwater Management Units units or coastal water management units where the target attribute states and/or coastal water objectives are met are only appropriate if: (i) at a minimum Unless the site is already operating at good management practice , an application for a resource consent includes, at a minimum , a defined programme of work for upgrading the discharge, in accordance with good management practice, within the term of the resource consent, and (c) all re-consenting of existing discharges in part Freshwater Management Units or coastal water management units where the target attribute states and/or coastal water objectives are not met are only appropriate if: (i) the conditions on a resource consent require

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					reduction of the adverse effects and improve the discharge at a level consistent with the degree of over allocation required to be reduced within that part Freshwater Management Unit and/or the coastal water management unit, and (ii) in determining the improvement to water quality required in (ii)(i), and the timeframe in which it is to be achieved, consideration will be given to the discharge's contribution to the target attribute state(s) for that part Freshwater Management Unit and/or coastal water objective not being met
S101 Wellington International Airport Limited	S101.045	Policy WH.P6: Cumulative adverse effects of point source discharges.	Amend	Supports the general intent of the policy but considers the policy is drafted in a problematic way in that it requires avoidance of cumulative adverse effects and then subsequently, for a range of other outcomes to be achieved, which are seemingly less than the outright avoidance "standard" imposed by the policy at the outset.	Amend the policy as follows: The cumulative adverse effects of point source discharges, excluding stormwater network and wastewater discharges, to water are avoided and managed such that: And redraft the subsequent part of the policy to properly link with this chapeau. Or delete and revert to Operative NRP .
S151 Wellington Water Ltd	S151.077	Policy WH.P6: Cumulative adverse effects of point source discharges.	Amend	The exclusion of stormwater and wastewater needs to be very explicit.	Amend policy as follows: The cumulative adverse effects of For point source discharges to water, excluding other than stormwater network and wastewater discharges, to water cumulative adverse effects are avoided and: OR in the alternative, define "point source discharge" to clearly exclude discharges from wastewater and stormwater networks Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S183 Yvonne Weeber	S183.196	Policy WH.P6: Cumulative adverse effects of point source discharges.	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.108	Policy WH.P6: Cumulative adverse effects of point source discharges.	Support	Not stated	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S188 Wellington Fish and Game Regional Council	S188.044	Policy WH.P6: Cumulative adverse effects of point source discharges.	Amend	Support with minor amendments	Amend clause (b) to correct error: (b) part Freshwater Management Units Units
S193 Wairarapa Federated Farmers	S193.073	Policy WH.P6: Cumulative adverse effects of point source discharges.	Amend	Amend to be consistent with WFF relief on objectives	Amend chapeau to read avoided or minimised ; Amend part FMU to read " monitored rivers " Make any consequential amendment(s) necessary to give effect to the relief sought.
S209 Enviro NZ Services Ltd (Enviro NZ)	S209.006	Policy WH.P6: Cumulative adverse effects of point source discharges.	Amend	Notes clause (b)(i) requires all consent applications to have upgrades. Considers it inequitable to require upgrades for sites where suitable treatment is already in place and the target is met.	(b) (i) at a minimum, an application for a resource consent includes a defined programme of work for upgrading the discharge (if target attribute state is not already met), in accordance....
S210 Guildford Timber Company Limited, Silverstream Forest Limited and the Goodwin Estate Trust.	S210.027	Policy WH.P6: Cumulative adverse effects of point source discharges.	Amend Oppose	Oppose approach in the policy to avoiding the cumulative effects of point source discharges as this policy leads to overly restrictive rules and creates uncertainty for renewal of existing consents as the timeframe referenced in Clause (c)(ii) is not specified. Seeks policy be amended to provide a more flexible effects management approach consistent with objectives and other policies in PC1.	Seeks the following amendments to Policy WH.P6: Amend the policy to read (or similar wording): "The cumulative adverse effects of point source discharges, excluding stormwater network and wastewater discharges, to water are avoided or minimised and ..." Clarify the programme for timeframes and programme for the renewal of existing consents in Clauses (b) and (c).
S222 Environmental Defence Society Inc.	S222.039	Policy WH.P6: Cumulative adverse effects of point source discharges.	Support	Gives effect to NPSFM.	Not stated
S225 Upper Hutt City Council	S225.071	Policy WH.P6: Cumulative adverse effects of point source discharges.	Amend	Supports intent of managing cumulative adverse effects but notes wording of (b)(i) is unclear as "upgrading the discharge" could mean increasing	Clarify what is meant by (b)(i).

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				discharge. Considers this is not intent of policy.	
S245 Tama Potaka, Minister of Conservation	S245.005	Policy WH.P6: Cumulative adverse effects of point source discharges.	Amend	Supports the intent of the policy but it needs to be consistent with NZCPS Policy 23.	Amend Policies to be consistent with NZCPS Policy 23
S257 Kāinga Ora	S257.014	Policy WH.P6: Cumulative adverse effects of point source discharges.	Oppose	Supports the general intent of the policy, but opposes the restrictive avoid policy framework.	Amend to remove the avoidance framework, or alternatively, introduce an appropriate qualifier statement to the avoidance framework. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S258 BP Oil NZ Ltd, Mobil Oil NZ Ltd, Z Energy Ltd - The Fuel Companies	S258.009	Policy WH.P6: Cumulative adverse effects of point source discharges.	Amend	Concerns with Policy WH.P6. It is unclear in chapeau whether exclusion for stormwater networks is intended to apply in relation to network discharge consents or consents held by other parties (such as industrial or trade premises) for discharges to the receiving environment that are via the stormwater network. Notes Clause (b)(i) of the policy applies to all existing discharges and specifies that where target attribute states are met those discharges are only appropriate if the consent conditions include a defined programme of work for improving discharge quality. Considers this suggests all existing discharge consents will need to be reviewed to ensure such consent conditions exist. Submitter opposes any such review of existing stormwater and operational water discharge consents, particularly where target attribute states are met. Considers this unreasonable and inappropriate. Clause (c) relates to situations in which the target attribute states are not met	Delete Policy WH.P6.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				and requires the conditions of existing consents to require a reduction of the adverse effects. Whilst an expectation for improvements in the quality of discharges is not necessarily opposed where the target attribute states are not met, the Fuel Companies have the same concern as in relation to Clause (b) in that there appears to be an expectation that all existing discharge consents will be reviewed and additional conditions required. That would be opposed. Considers policy be deleted due to uncertainty and inappropriateness.	
S261 Forest & Bird	S261.068	Policy WH.P6: Cumulative adverse effects of point source discharges.	Support	Supports giving effect to NPSFM by improving discharge management.	Retain as notified.
S286 Taranaki Whānui	S286.037	Policy WH.P6: Cumulative adverse effects of point source discharges.	Support	Support in principle.	Retain as notified.
S288 China Forest Group Company New Zealand Ltd	S288.049	Policy WH.P6: Cumulative adverse effects of point source discharges.	Neutral	Notes typo in clause (c)(ii).	Amend clause (c)(ii): in determining the improvement to water quality required in (ii), and...
S183 Yvonne Weeber	S183.197	Policy WH.P7: Discharges to groundwater.	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.109	Policy WH.P7: Discharges to groundwater.	Support	Not stated	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S188 Wellington Fish and Game Regional Council	S188.045	Policy WH.P7: Discharges to groundwater.	Amend	Seeks outcome and goal of improvement be clearly stated.	Amend Policy as follows: .. and where the quality of the groundwater is degraded, existing discharges shall be managed to improve groundwater quality to a state of health and wellbeing such that the groundwater as tested will no longer be contributing to degradation of downstream aquatic environments or public health.
S193 Wairarapa Federated Farmers	S193.074	Policy WH.P7: Discharges to groundwater.	Amend	Considers NRP PC1 does not provide evidence of degraded groundwater	Minor edits as follows: Amend to delete the reference to "existing discharges ..." and insert a requirement for investigation and groundtruthing of degraded groundwater Make any consequential amendment(s) necessary to give effect to the relief sought.
S206 Winstone Aggregates	S206.038	Policy WH.P7: Discharges to groundwater.	Amend	Considers the requirement that all discharges "shall not degrade" is not clear or directly measurable. Considers direction should be focused on "maintaining" groundwater quality based on its use, in accordance with NPS-FM Policy 5. Notes there is no indication on what "degraded groundwater" means, and considers it must be aligned with a limit depending on the use of the groundwater. Seeks the policy is split into two sentences to improve clarity.	Amend policy as follows: Policy WH.P7: Discharges to groundwater All discharges to land that may enter groundwater, and discharges to groundwater, shall maintain not degrade the quality of groundwater quality to continue to provide for its existing and future use., and where the quality of groundwater is degraded, existing quality is not meeting national guidelines is degraded, existing discharges shall be managed in a way that to improves groundwater quality.
S209 Enviro NZ Services Ltd (Enviro NZ)	S209.007	Policy WH.P7: Discharges to groundwater.	Neutral	Not stated	Not stated
S211 Hutt City Council	S211.012	Policy WH.P7: Discharges to groundwater.	Amend	Supports in principle the reduction in point source discharges to ground water, however seeks clarification on policy wording, such as how discharges will be managed and how groundwater quality will be measured.	Review wording of policy to clarify intent.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S225 Upper Hutt City Council	S225.072	Policy WH.P7: Discharges to groundwater.	Oppose	Concerned drafting of "All activities on land" ultimately leads to discharges to ground water, including animal effluent, sprays and other common activities. Considers policy not specific and does not identify clearly which discharges are being addressed. Notes this is a significant change for any existing discharges i.e. all existing land use which may or not have required consents under district plans and needs to be much more clear, directive and measurable. Appears policy has not been well considered and is unclear as to what is trying to be achieved.	Amend to clarify which discharges this policy relates.
S258 BP Oil NZ Ltd, Mobil Oil NZ Ltd, Z Energy Ltd - The Fuel Companies	S258.010	Policy WH.P7: Discharges to groundwater.	Support	Supports Policy WH.P7	Retain Policy WH.P7 as notified.
S261 Forest & Bird	S261.069	Policy WH.P7: Discharges to groundwater.	Amend	Supports protection and restoration of groundwater to support ecosystem health and drinking water values.	Retain and support policy with an objective with target attribute states for groundwater quality, including a target of < 1.0 mg/L nitrate-nitrogen for groundwater to protect human and ecosystem health. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S286 Taranaki Whānui	S286.038	Policy WH.P7: Discharges to groundwater.	Support	Support in principle.	Retain as notified.
S33 Wellington City Council	S33.041	Policy WH.P8: Avoiding discharges of specific products and waste.	Support	Support the management of discharges to groundwater.	Retain as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S43 Fulton Hogan Ltd	S43.009	Policy WH.P8: Avoiding discharges of specific products and waste.	Support	Seeks for washdown water from fresh concrete pours to be recognised in clause (a).	Policy WH.P8: Avoiding discharges of specific products and waste Avoid discharges to freshwater and coastal water, including where this is via the stormwater network, of: (a) chemical cleaning products, paint, solvents, fuels and coolant, oil, wet cement products including wash water and drill cooling water, or (b) animal effluent from an animal effluent storage facility or from an area where animals are confined, or (c) untreated industrial or trade waste, or (d) untreated organic waste or leachate from storage of organic material.
S101 Wellington International Airport Limited	S101.046	Policy WH.P8: Avoiding discharges of specific products and waste.	Oppose	Notes there are instances where discharges associated with the activities listed in (a) to (d) may occur at the Airport for the purpose of ensuring safe airport operations and emergency readiness. Provides examples of activities within (a) to (d) that present operational difficulties for WIAL including the use of chemicals to finish the cleaning process for any accidental fuel spills on site, the use of chemicals to maintain the protective coating on vehicles (Fire Rescue), and the use of de-icing fluids which enable aircraft to operate safely in cold temperatures. Notes that WIAL takes steps to minimise and effectively treat discharges arising from the above sources but residual discharges from these sources will likely remain. Considers this needs to be recognised within the policy.	Provide a discrete exemption for Wellington International Airport, or delete and revert to Operative NRP.
S151 Wellington Water Ltd	S151.078	Policy WH.P8: Avoiding discharges of specific products and waste.	Amend	Supports the intent of this policy and associated rule but concerned about how it may impact on stormwater and wastewater discharges.	Amend policy as follows:... Noting that this policy does not apply to contaminants collected as part of stormwater management in response to precipitation or part of the operation of the wastewater network. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S183 Yvonne Weeber	S183.198	Policy WH.P8: Avoiding discharges of specific products and waste.	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.110	Policy WH.P8: Avoiding discharges of specific products and waste.	Support	Not stated	Not stated
S193 Wairarapa Federated Farmers	S193.075	Policy WH.P8: Avoiding discharges of specific products and waste.	Amend	Amend for consistency with c) and d)	Amend b) to read untreated human or animal effluent (delete proposed text) Make any consequential amendment(s) necessary to give effect to the relief sought.
S209 Enviro NZ Services Ltd (Enviro NZ)	S209.008	Policy WH.P8: Avoiding discharges of specific products and waste.	Amend	Considers the definition of "untreated" is open to interpretation and would have unintended consequences. Considers there should be a volume threshold.	Provide clarity on untreated waste. Provide a volume threshold.
S213 Pareraho Forest Trust	S213.019	Policy WH.P8: Avoiding discharges of specific products and waste.	Amend	Notes observation of illegal discharges of substances into the stormwater network that ends up in streams. Seeks GWRC action plans include public education and promotion of importance for appropriate disposal of hazardous liquids.	Add a subpoint requiring Greater Wellington to undertake public education and highlight the impact of disposing of polluting liquids in stormwater.
S225 Upper Hutt City Council	S225.073	Policy WH.P8: Avoiding discharges of specific products and waste.	Oppose	Concerned high level policy relating to storm water network where consents already exist. Questions whether responsibility of consent holder to manage and monitor? Notes no specific thresholds so questions if washing cars and houses, animals confined in a paddocks, or driveways require a consent. Notes no	Seek clarity on what animal effluent and what chemical cleaner as it is impossible to manage back yard cats and dogs for example, and not all chemical cleaners are the same. Identify scale for wet cement provision. Amend to clarify which discharges this policy relates.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				consideration for environmentally friendly cleaning products. Considers scale for wet cement unclear, and questions if it relates to larger scale developments or small scale activities where cement pads are constructed for heat pump fans or sheds etc. Latter would be unworkable and unenforceable. Appears policy has not been well considered and is unclear what it is trying to achieve.	
S245 Tama Potaka, Minister of Conservation	S245.006	Policy WH.P8: Avoiding discharges of specific products and waste.	Amend	Supports the intent of the policy but it needs to be consistent with NZCPS Policy 23.	Amend Policies to be consistent with NZCPS Policy 23
S257 Kāinga Ora	S257.015	Policy WH.P8: Avoiding discharges of specific products and waste.	Amend	Supports the proposed policy but only in relation to the untreated state of discharges.	Alter so all points relate to untreated discharges Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S258 BP Oil NZ Ltd, Mobil Oil NZ Ltd, Z Energy Ltd - The Fuel Companies	S258.011	Policy WH.P8: Avoiding discharges of specific products and waste.	Amend	Supports the intent of Policy WH.P8 but notes it does not address risk inherent in the handling of hazardous substances and potential for an accidental spillage of such substances to occur. Considers policy should be amended to address accidental spillages. Avoidance of such discharges as a first priority is supported. Where some residual risk remains, considers additional management measures such as containment or treatment will be appropriate to ensure contaminants do not enter water bodies.	Amend Policy WH.P8, as follows: Policy WH.P8: Avoiding discharges of specific products and waste Avoid, as a first priority , discharges to freshwater and coastal water, including where this is via the stormwater network, of: (a) chemical cleaning products, paint, solvents, fuels and coolant, oil, wet cement products and drill cooling water, or (b) animal effluent from an animal effluent storage facility or from an area where animals are confined, or (c) untreated industrial or trade waste, or (d) untreated organic waste or leachate from storage of organic material. Where there is a residual risk of a discharge of the substances listed in (a) to (d) above, including any accidental spillage, management measures are implemented to contain and/or treat the discharge to avoid or

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					mitigate adverse effects on freshwater or coastal water.
S261 Forest & Bird	S261.070	Policy WH.P8: Avoiding discharges of specific products and waste.	Amend	Seeks for referenced discharges to be broadened to include anything at a concentration that may kill fish.	Add clauses: (e) rubbish (f) agrichemicals, fertilisers, persistent chemicals (g) any other material that may kill fish Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S286 Taranaki Whānui	S286.039	Policy WH.P8: Avoiding discharges of specific products and waste.	Support	Support in principle.	Retain as notified.
S288 China Forest Group Company New Zealand Ltd	S288.050	Policy WH.P8: Avoiding discharges of specific products and waste.	Support	Not stated	Not stated
S33 Wellington City Council	S33.042	Policy WH.P9: General stormwater policy to achieve the target attribute states and coastal water objectives.	Amend	Supports in part the management of copper and zinc contamination however notes this is currently managed by District Plans.	Amend policy to clarify GWRC role is managing copper and zinc contamination.
S93 CentrePort Limited	S93.004	Policy WH.P9: General stormwater policy to achieve the target attribute states and coastal water objectives.	Not Stated	Supports the intent of the policy.	Retain policy as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S116 Taumata Arowai	S116.031	Policy WH.P9: General stormwater policy to achieve the target attribute states and coastal water objectives.	Amend	Notes policies and rules that establish requirements for wastewater and stormwater networks provide clarity to network operators and will have a bearing on the quality and quantity of contaminant discharge. Considers that complementary provisions between the RMA, WSA and WSEA are well aligned, efficient, effective, and duplication is avoided where possible. Suggests a solution may be signalling the relationship between the different legislative requirements and how a single product (e.g. a stormwater management strategy) might be developed, reviewed and implemented, to meet both.	Provisions that interface with complementary Taumata Arowai duties and powers are well aligned, efficient and effective, and unnecessary duplication is avoided.
S151 Wellington Water Ltd	S151.079	Policy WH.P9: General stormwater policy to achieve the target attribute states and coastal water objectives.	Amend	Considers baseline states cannot be maintained if they are not clear. Considers the reference to table 8.1 should be deleted because it contains no relevant information. Notes the policy could be interpreted as stormwater discharges being the only cause of heavy metal targets not being met, which is not correct. The timeframes in Table 8.4 should refer to 2060 rather than 2040.	Amend policy as follows: Stormwater discharges to a surface water body or coastal water, or into or onto land in a manner that may enter freshwater or coastal water, are managed to support, in a commensurate manner , so that the baseline water quality state for copper and zinc is being maintained, or improved where degraded, including in the relevant part Freshwater Management Unit or coastal water management unit, in order for the coastal water objectives and target attribute states to be met by the timeframes set out in Tables 8.1 and 8.4. Define "commensurate" as set out in definitions submission point (refer Section A of submission). Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

					discharge, including erosion and scour, and localised adverse water quality effects, and (iv) inspections, monitoring and ongoing maintenance, including costs, to maintain functionality in terms of treatment quality and capacity, and (v) existing or proposed communal stormwater treatment systems in the stormwater catchment or sub-catchment, or part Freshwater Management Unit.
S33 Wellington City Council	S33.043	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Considers proposed framework does not promote integrated management and will result in consenting overlap without evidence of improved resource management outcomes. Identifies that development discharges are already managed via a global stormwater discharge consent, and that the WCC PDP proposes to manage on-site stormwater for s9 land uses which includes both water quality and water quantity management. Considers that the regional plan rule framework duplicates consenting requirements, and recommends the NRP stays silent on this and GWRC focus on higher-level management of discharge consents, including stormwater not connected to a local authority stormwater network.	Amend as follows: Policy WH.P10: Managing adverse effects of stormwater discharges All stormwater discharges and associated land use activities that is not managed by a stormwater management strategy shall be managed by...
S38 Summerseat Group Holdings Limited	S38.006	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Considers PC1 to be lacking in sufficient detail on the types of hydrological controls and water sensitive designs required for various types and scales of development. Concerned compliance with this policy will be difficult and require expensive bespoke solutions as there are no technical guidelines/ compliant solutions incorporated into the plan change. For example, the creation of small areas of impervious surfaces should not require engineering advice to design site specific	Review policy and rule framework for the treatment of stormwater, and provide technical standards for acceptable solutions.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				controls. Considers the cost of the approach on landowners/developers and the impacts on housing supply in the region has not been sufficiently assessed in the Section 32 Evaluation.	
S101 Wellington International Airport Limited	S101.047	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Notes the current drafting in limb (b) appears to be more targeted at new, greenfield development. Notes that for the Airport it is not always practicable to implement water sensitive urban design or hydrological control measures and such measures can also lead to conflicts with the operational and regulatory requirements of the Airport. Notes that standing pools of water can provide a resting place or food source for birds and can pose a potential public health risk when located near a port of entry. Notes that International Civil Aviation Organisation ("ICAO") and the Civil Aviation Authority ("CAA") requirements require the Airport to undertake extensive wildlife management, including active management of birds and International Health Regulations 2005 require control of vector habitats around designated ports or entry, such as potential mosquito habitat.	Amend (b) as follows or include a similar reference that only applies to Wellington Airport or to regionally significant infrastructure. (b) using hydrological control and water sensitive urban design measures where practicable to avoid, remedy or mitigate adverse effects of stormwater quantity and maintain, to the extent practicable, natural stream flows, and Amend all limbs to use the term "where practicable". Consideration should be given to including this reference in the chapeau of the policy and removing it from the respective limbs (i.e. All stormwater discharges and associated land use activities shall be managed by, where practicable:) Or delete and revert to Operative NRP .
S116 Taumata Arowai	S116.032	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Notes policies and rules that establish requirements for wastewater and stormwater networks provide clarity to network operators and will have a bearing on the quality and quantity of contaminant discharge. Considers that complementary provisions between the RMA, WSA and WSEA are well aligns, efficient, effective, and duplication is avoided where possible.	Provisions that interface with complementary Taumata Arowai duties and powers are well aligned, efficient and effective, and unnecessary duplication is avoided.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Suggests a solution may be signalling the relationship between the different legislative requirements and how a single product (e.g. a stormwater management strategy) might be developed, reviewed and implemented, to meet both.	
S151 Wellington Water Ltd	S151.080	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Notes that for clause (a), 'maximise' already has a practicability component to it in the definitions.	Amend policy as follows: (a) using source control to minimise contaminants in the stormwater discharge and maximise, to the extent practicable, the removal of contaminants from stormwater, including through the use of water sensitive urban design measures, and Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S161 GILLIES GROUP MANAGEMENT LTD	S161.012	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Considers there is insufficient detail on the types of hydrological controls and WSUD are required for various types and scales of development. Considers that clauses (a), (b) and (c) may pose significant burdens on property owners and developers. Considers that communal stormwater treatment may not be practical in all scenarios. Considers that engineering advice should not be necessary for the creation of small impervious areas, noting a permitted activity rule for 30m ² of impervious areas. Considers the s32 report does not adequately assesses the costs of PC1 on landowners and developers, nor the broader impacts on urban growth and housing supply.	Review policy and rule framework for the treatment of stormwater, and provide technical standards for acceptable solutions. Delete reference to financial contributions.
S165 PUKERUA HOLDINGS LIMITED	S165.012	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Considers PC1 lacks sufficient detail around what types of hydrological controls and water-sensitive design are required for different types/scales of development. Concerned the conditions outlined in subsections (a), (b), and (c) may pose significant financial burdens on	Review policy and rule framework for the treatment of stormwater, and provide technical standards for acceptable solutions. Delete reference to financial contributions.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				property owners and developers. Concerned the policy's focus on communal stormwater treatment systems within a catchment or sub-catchment, as laid out in (c), may also not be achievable in all scenarios. Considers that as there is a permitted activity rule for impervious surfaces as small as 30m ² , the creation of these small areas of impervious surfaces should not have to seek engineering advice to design site-specific controls. Considers the S32 assessment does not adequately assess the costs and impacts on broader urban growth and supply of housing in the region.	
S169 KORU HOMES NZ LIMITED	S169.007	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	<p>Concerns PC1 lacks detail on what types of hydrological controls and water sensitive design are required for development.</p> <p>Concerned the conditions in subsections (a)-(c) may burden property owners and developers and the focus in standard (c) on communal stormwater treatment systems may not be practical or achievable.</p> <p>Considers engineering advice should not be a requirement for the design of site specific controls for the creation of small areas of impervious surface.</p> <p>Concerns the s32 evaluation doesn't adequately assess the implication costs of PC1 and its impacts on urban growth and housing supply.</p>	<p>Review policy and rule framework for the treatment of stormwater, and provide technical standards for acceptable solutions.</p> <p>Delete reference to financial contributions.</p>
S173 ARAKURA PLAINS DEVELOP	S173.012	Policy WH.P10: Managing adverse effects	Amend	Considers there is insufficient detail on the types of hydrological controls and WSUD are required for various types and scales of development. Considers that	Review policy and rule framework for the treatment of stormwater, and provide technical standards for acceptable solutions. Delete reference to financial contributions.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
MENT LIMITED		of stormwater discharges.		clauses (a), (b) and (c) may pose significant burdens on property owners and developers. Considers that communal stormwater treatment may not be practical in all scenarios. Considers that engineering advice should not be necessary for the creation of small impervious areas, noting a permitted activity rule for 30m ² of impervious areas. Considers the s32 report does not adequately assesses the costs of PC1 on landowners and developers, nor the broader impacts on urban growth and housing supply.	
S183 Yvonne Weeber	S183.200	Policy WH.P10: Managing adverse effects of stormwater discharges.	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.112	Policy WH.P10: Managing adverse effects of stormwater discharges.	Support	Not stated	Not stated
S188 Wellington Fish and Game Regional Council	S188.047	Policy WH.P10: Managing adverse effects of stormwater discharges.	Not Stated	Notes effects management hierarchy should be embedded in clause as a directive for future consent pathway as per NPS-FM 2020 3.21 (iv). Notes importance stormwater inputs are addressed, and costs are not passed on to the environment or those who interact with downstream environment. Costs and economic feasibility should not be used as a 'get out of doing the right thing' card for developers, councils etc.	Not stated
S193 Wairarapa Federated Farmers	S193.077	Policy WH.P10: Managing adverse effects	Amend	Amend for consistency with intent	Amend chapeau to read stormwater network discharges

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

		of stormwater discharges.			
S210 Guildford Timber Company Limited, Silverstream Forest Limited and the Goodwin Estate Trust.	S210.029	Policy WH.P10: Managing adverse effects of stormwater discharges.	Support	Supports Policy WH.P10	Retain WH.P10 as notified
S211 Hutt City Council	S211.013	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	<p>Supports in principle the regulation of stormwater contaminants through hydrological control and WSUD to improve freshwater outcomes. Notes there is overlap with Hutt City District Plan rules which also manage hydrology of stormwater to manage the demand on the three waters network from urban development, which is not addressed in the s32 report.</p> <p>Considers PC1 provisions are light on detail on how hydrological controls and WSUD will be implemented, in comparison with the THW-Three Waters chapter of the Draft Hutt City District Plan which requires hydraulic neutrality measures to assist with managing peak stormwater runoff from development sites so the risk of downstream flooding is not increased, and assist with prolonging the life of existing stormwater management systems. Considers the inclusion of technical specifications in the NRP can assist smaller developments as they could rely on the technical</p>	<p>Develop more comprehensive objectives and policies for hydrological control and WSUD measures including acceptable solutions and amend policy.</p> <p>Develop a more comprehensive policy and implementation framework with regard to hydrological control and water sensitive urban design measures, including acceptable solutions and amend policy accordingly.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				specifications without having to develop bespoke solutions for their site and undertaking expensive hydrological and/or engineering calculations to demonstrate compliance. Supports the recognition of catchment-scale communal schemes.	
S225 Upper Hutt City Council	S225.075	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	<p>Concerned chapeau of policy is too broad and questions whether, in relation to (c)(ii), is it also appropriate to include attenuation? Unclear what is meant by "load reduction factor" and concerned this might not be practical at an individual scale where discharge from site is into a stormwater network such as an individual house.</p> <p>Notes may be inappropriate for rural properties where a small discharge to land after rainwater collection, for example. Maintenance required for these types of stormwater treatment systems to be effective is inappropriate for individual properties and likely to result in failure.</p>	The scope of this policy should be narrowed to apply only to stormwater networks not individual developments within a network, except for point source discharges to surface water. This should not apply to one house or rural scenarios which discharge directly to land via soak pits or other similar systems.
S226 Higgins Contractor s Limited	S226.005	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Not opposed to WH.P10 and supports management of adverse effects on stormwater discharges but opposes methods regulating these discharges, including hydrological control via (b) and the onerous requirements which flow into the rules for stormwater from impervious surfaces.	Amend the Policy WH.P10 to have regard to matters (a) - (c)
S241 Pukerua Property Group Ltd	S241.009	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Considers using stormwater control to effectively manage or prevent land use is not consistent with integrated management principles contained in RMA.	<p>Withdraw PC1. If PC1 not withdrawn, delete objectives and policies using stormwater controls to manage or prevent land use.</p> <p>If objective and policies are not deleted, they should be amended to remove avoidance principles and replaced with objectives and policies with same effect/guidance as remainder of PC1 before notification with perhaps some policy relief for activities</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					that require consent under operative provisions (in force before PC1).
S243 Land Matters Limited	S243.003	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Considers use of stormwater control to effectively manage or prevent land use inconsistent with integrated management principles contained in RMA.	Seeks objectives and policies be deleted or amended to provide opportunities for development within Porirua Whaitua. If not deleted, requests objectives and policies be amended to remove avoidance principles and be replaced with objectives and policies of same effect/guidance as NRP before notification with some policy relief for activities that require consent under the operative provisions.
S245 Tama Potaka, Minister of Conservation	S245.008	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Supports the intent of the policy but it needs to be consistent with NZCPS Policy 23.	Amend Policies to be consistent with NZCPS Policy 23
S255 Woodridge Holdings Ltd	S255.026	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Suggests wording of "where practicable" provides no clarity as to when stormwater treatment systems will and won't be required.	Remove the words "where practical" and be more specific.
S257 Kāinga Ora	S257.017	Policy WH.P10: Managing adverse effects of stormwater discharges.	Support	Broadly supports the policy but considers the proposed rule framework that flows from this requiring the control and treatment of stormwater at site and corresponding thresholds are overly restrictive.	Retain policy as notified
S258 BP Oil NZ Ltd, Mobil Oil NZ Ltd, Z Energy Ltd - The Fuel Companies	S258.013	Policy WH.P10: Managing adverse effects of stormwater discharges.	Support	Supports Policy WH.P10	Retain Policy WH.P10 as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S261 Forest & Bird	S261.072	Policy WH.P10: Managing adverse effects of stormwater discharges.	Support	Supports achievement of ecosystem health	Retain as notified.
S275 The New Zealand Transport Agency	S275.015	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Considers it is outside of the direct control of NZTA to deliver source control for its stormwater network. Notes Schedule 27 requirements requires Work with the Ministers for the Environment and Transport, Waka Kotahi NZ Transport Agency and the territorial authorities to promote source control for copper from vehicles . Considers more flexibility is required in whether the stormwater network operator does not have full mandate over the contaminant source.	Modify WH.P10(a) to provide for flexibility where the stormwater network operator does not have full mandate over the contaminant source. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S282 Pat van Berkel	S282.014	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Clauses refer to 'where practicable' or 'where avoidance is not practicable' for contaminant discharges. Concerns developers could claim treatment systems are not practicable (preferring offsetting) when avoiding may be better than offsetting for environmental outcomes. No mention of permeable surfaces.	Add condition to WH.P10 (c): Where a stormwater treatment system is judged not practicable consider not undertaking the activity. Add a note to WH.P10 (b): Water sensitive urban design includes permeable surfaces and rainwater tanks.
S286 Taranaki Whānui	S286.041	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Supports management of stormwater discharges through hydrological control and water sensitive urban design measures. Supports recognition of catchment-scale communal schemes which may be more efficient than numerous small systems on individual sites. Considers PC1 does not contain sufficient direction on how measures will be implemented and does not set out what would be considered an acceptable	Develop a more comprehensive framework for hydrological control and water sensitive urban design measures, including acceptable technical solutions.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>solution to comply. Considers if technical specifications were included, it would mean that smaller developments could rely on these without having to develop expensive bespoke solutions on site by-site basis.</p>	
S288 China Forest Group Company New Zealand Ltd	S288.051	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Notes clause (c) does not include temporal matters to be taken into account.	Add a subclause (vi) to account for temporal nature of any discharge.
S2 Horokiwi Quarries Ltd	S2.021	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial or trade premises.	Amend	<p>Considers it impracticable to avoid contaminants being entrained in stormwater as is acknowledged in the section 32 evaluation report, and by policies such as WH.P15, which recognises that there may be residual stormwater contaminants associated with development.</p> <p>Considers that as the focus of the policy is on the management of hazardous substances prepared, used, or stored at high-risk industrial and trade premises, reference to contaminants generally should be removed from the policy, so the policy is implementable and retains a clear focus on the management of hazardous substances.</p> <p>Considers the management of stormwater contaminants is provided for under policies WH.P10 and WH.P14, which will also apply to high-risk industrial or trade premises.</p> <p>Seeks amendment to remove the</p>	<p>Amend Policy WH.P11 as follows: Policy WH.P11: Discharges of contaminants hazardous substances in stormwater from high risk industrial or trade premises The discharge of stormwater to water, including discharges via from the stormwater network, from a high risk industrial or trade premise shall be managed by:</p> <p>a) having procedures and equipment in place to contain any spillage of hazardous substances for storage or removal, and b) avoiding contaminants or hazardous substances being entrained in stormwater and discharged to a surface water body or coastal water, including via the stormwater network, or where avoidance is not practicable, implementing good management practice to avoid or minimise adverse effects on the environment, including reducing contaminant volumes and concentrations as far as practicable, and applying measures, including secondary containment, treatment, management procedures, and monitoring, and c) installing an interceptor where there is a risk of petroleum hydrocarbons entering into the stormwater network, a surface water body or coastal water, and d) avoiding or mitigating adverse effects of stormwater discharges on groundwater quality.</p>

					petroleum hydrocarbons entering into the stormwater network, a surface water body or coastal water, and (d) avoiding or mitigating adverse effects of stormwater discharges on groundwater quality.
S261 Forest & Bird	S261.073	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial or trade premises.	Amend	Considers higher levels of control are required where stormwater is coming from a high risk location	Require resource consent for discharges of stormwater from high risk areas. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S282 Pat van Berkel	S282.015	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial or trade premises.	Amend	Clauses refer to 'where practicable' or 'where avoidance is not practicable' for contaminant discharges. Concerns developers could claim treatment systems are not practicable (preferring offsetting) when avoiding may be better than offsetting for environmental outcomes.	Not stated
S286 Taranaki Whānui	S286.042	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial or trade premises.	Support	Support in principle.	Retain as notified.
S93 CentrePort Limited	S93.005	Policy WH.P12: Managing stormwater from a port or airport.	Amend	Seeks removal of the word "avoid" because it is not realistic in a port environment and is out of step with relevant objectives and rules.	Policy WH.P12: Managing stormwater from a port or airport The adverse effects, including on aquatic ecosystem health and mahinga kai, contact recreation and Māori customary use, of the discharge of stormwater from a port, or airport, where the discharge will enter water, including via a local authority or state highway stormwater network, shall be avoided or minimised by: a) identifying priorities for improvement, including methods and timeframes for improvement, and b) having particular regard to protecting sites with identified significant or outstanding values, and

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					c) implementing good management practice including reducing contaminant volumes and concentrations as far as practicable, and applying measures, including secondary containment, treatment, management procedures, and monitoring, and d) where required to reduce localised adverse effects, or to meet the target attribute states and coastal water objectives, progressively improving discharge quality over time.
S101 Wellington International Airport Limited	S101.049	Policy WH.P12: Managing stormwater from a port or airport.	Not Stated	Supports the overall intent of the policy and notes it is broadly similar to the operative equivalent (Policy P89). Concerned the policy is not clear of the circumstances in which the addition of the new "avoidance" directive within the policy would be engaged and is not aware, insofar as the Airport is concerned, of any issues arising from its discharge activities that would warrant an effective cessation of its continuance. Notes WIAL actively manages its discharges and considers the addition of the avoidance clause is unnecessary and should be removed from the policy.	Amend the policy as follows: The adverse effects, including on aquatic ecosystem health and mahinga kai, contact recreation and Māori customary use, of the discharge of stormwater from a port, or airport, where the discharge will enter water, including via a local authority or state highway stormwater network, shall be avoided or managed by:.... Or delete and revert to Operative NRP.
S113 Zealandia Te Māra a Tāne	S113.012	Policy WH.P12: Managing stormwater from a port or airport.	Support	Considers the Kaiwharawhara awa stands to benefit from an overall reduction of copper and zinc concentrations in stormwater systems.	Not stated
S116 Taumata Arowai	S116.034	Policy WH.P12: Managing stormwater from a port or airport.	Amend	Notes policies and rules that establish requirements for wastewater and stormwater networks provide clarity to network operators and will have a bearing on the quality and quantity of contaminant discharge. Considers that complementary provisions between the RMA, WSA and WSEA are well aligns, efficient, effective, and duplication is avoided where possible.	Provisions that interface with complementary Taumata Arowai duties and powers are well aligned, efficient and effective, and unnecessary duplication is avoided.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Suggests a solution may be signalling the relationship between the different legislative requirements and how a single product (e.g. a stormwater management strategy) might be developed, reviewed and implemented, to meet both.	
S183 Yvonne Weeber	S183.202	Policy WH.P12: Managing stormwater from a port or airport.	Support	Concerned about stormwater from Wellington Airport entering Lyall Bay Beach and considers the effects of this need to be managed.	Not stated
S186 Guardians of the Bays Inc	S186.114	Policy WH.P12: Managing stormwater from a port or airport.	Support	Effects from stormwater from Wellington Airport entering Lyall Bay Beach need to be properly managed.	Not stated
S245 Tama Potaka, Minister of Conservation	S245.010	Policy WH.P12: Managing stormwater from a port or airport.	Amend	Supports the intent of the policy but it needs to be consistent with NZCPS Policy 23.	Amend Policies to be consistent with NZCPS Policy 23
S258 BP Oil NZ Ltd, Mobil Oil NZ Ltd, Z Energy Ltd - The Fuel Companies	S258.015	Policy WH.P12: Managing stormwater from a port or airport.	Support	To the extent that Policy WH:P12 might apply to fuel facilities at airports or ports, the policy requirement to implement good management practices and apply measures such as secondary containment, treatment and management procedures can be supported.	Retain Policy WH.P12 as notified.
S261 Forest & Bird	S261.074	Policy WH.P12: Managing stormwater from a port or airport.	Amend	Considers higher levels of control are required where stormwater is coming from a high risk location	Require resource consent for discharges of stormwater from high risk areas. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S286 Taranaki Whānui	S286.043	Policy WH.P12: Managing stormwater from a port or airport.	Amend	Support in principle, but considers policy could be reworded to strengthen mana whenua values and to be consistent with wording of other policies.	Amend policy: Policy WH.P12: Managing stormwater from a port or airport The adverse effects, including on aquatic ecosystem health and mahinga kai, contact recreation and Māori customary use, of t The discharge of stormwater from a port, or airport, where the discharge will enter water, including via a local authority or state highway stormwater network, shall be avoided or minimised by: (a) identifying priorities for improvement, including methods and timeframes for improvement, and (b) having particular regard to protecting sites with identified significant or outstanding values, and (c) implementing good management practice including reducing contaminant volumes and concentrations as far as practicable, and applying measures, including secondary containment, treatment, management procedures, and monitoring, and (d) where required to reduce localised adverse effects, or to meet the target attribute states and coastal water objectives, progressively improving discharge quality over time. (e) prioritising the reduction, removal, and/or treatment of stormwater discharges to Schedule C (mana whenua) sites, or mahinga kai sites.
S33 Wellington City Council	S33.045	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Support	Support the management of stormwater discharges from local authority and state highway network to ensure an integrated management approach to stormwater discharges from urban development.	Retain as notified.
S116 Taumata Arowai	S116.035	Policy WH.P13: Managing stormwater	Amend	Notes policies and rules that establish requirements for wastewater and stormwater networks provide clarity to network operators and will have a	Provisions that interface with complementary Taumata Arowai duties and powers are well aligned, efficient and effective, and unnecessary duplication is avoided.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		network discharges through a Stormwater Management Strategy.		bearing on the quality and quantity of contaminant discharge. Considers that complementary provisions between the RMA, WSA and WSEA are well aligns, efficient, effective, and duplication is avoided where possible. Suggests a solution may be signalling the relationship between the different legislative requirements and how a single product (e.g. a stormwater management strategy) might be developed, reviewed and implemented, to meet both.	
S116 Taumata Arowai	S116.036	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Support	Notes managing stormwater and wastewater discharges is important to Māori. Supports acknowledgment of Māori customary practice and use of wai, the partnership role of mana whenua in developing freshwater action plans, and acknowledgment of the need to engage with mana whenua in rules for discharges of wastewater and stormwater.	Retain as notified (except as requested to be amended by mana whenua).
S151 Wellington Water Ltd	S151.082	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Refers to overarching Section A of submission, particularly in relation to prioritisation, TAS, modelling and monitoring. Supports the focus on copper and zinc in clause (a) Considers the reference to concentrations in clause (b) should be deleted. Considers the range of target attribute states in clause (c) is too wide and creates uncertainty. Considers clause (e) should focus on modelling to determine the necessary copper and zinc load reduction in	Amend policy as follows: Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy Stormwater discharges from local authority and state highway networks shall be managed by: (a) reducing the copper and zinc loads in discharges to coastal water management units to contribute to meeting the coastal water objectives to maintain or improve, and (b) reducing the concentration and contaminant loads of copper and zinc from discharges to surface water bodies in order to maintain, and in degraded part Freshwater Management Units improve, the water quality state for dissolved copper and zinc to contribute to meeting the target attribute states in those part Freshwater Management Units, and (c) supporting the achievement of any other relevant

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S186 Guardians of the Bays Inc	S186.115	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Support	Not stated	Not stated
S188 Wellington Fish and Game Regional Council	S188.049	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Support	Not stated	Not stated
S213 Pareraho Forest Trust	S213.020	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Considers (f) should include prioritising Schedule F sites. Notes stormwater discharges impact on indigenous fish populations including threatened species. Notes lack of stormwater reduction, removal and treatment of stormwater discharges for urban areas and recent greenfield development needs to be addressed through stream health improvements and achieving objectives of this Plan Change.	Add Schedule F sites to (f)
S225 Upper Hutt City Council	S225.076	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Supports intent to improve water quality through managing stormwater contaminants, however, considers cost implication of policy needs to be funded.	Retain as notified except seek that "and/or" used throughout this document be amended to clarify whether it is inclusive or not as and/or is inappropriate. Support councils with funding.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S226 Higgins Contractors Limited	S226.006	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Supports use of stormwater management strategies where relevant; i.e. municipal discharges, state highways, or large urban redevelopment. Opposes stormwater management strategies and imposition of requirements of Schedule 31 for smaller site redevelopment, including where discharges from smaller sites temporarily enter the local authority network.	Amend Policy WH.P13 so that it relates to municipal discharges, state highway discharges, or large urban development only.
S241 Pukerua Property Group Ltd	S241.010	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Considers using stormwater control to effectively manage or prevent land use is not consistent with integrated management principles contained in RMA.	Withdraw PC1. If PC1 not withdrawn, delete objectives and policies using stormwater controls to manage or prevent land use. If objective and policies are not deleted, they should be amended to remove avoidance principles and replaced with objectives and policies with same effect/guidance as remainder of PC1 before notification with perhaps some policy relief for activities that require consent under operative provisions (in force before PC1).
S243 Land Matters Limited	S243.004	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Considers use of stormwater control to effectively manage or prevent land use inconsistent with integrated management principles contained in RMA.	Seeks objectives and policies be deleted or amended to provide opportunities for development within Porirua Whaitua. If not deleted, requests objectives and policies be amended to remove avoidance principles and be replaced with objectives and policies of same effect/guidance as NRP before notification with some policy relief for activities that require consent under the operative provisions.
S245 Tama Potaka, Minister of Conservation	S245.011	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Supports the intent of the policy but it needs to be consistent with NZCPS Policy 23.	Amend Policies to be consistent with NZCPS Policy 23

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S246 Water New Zealand	S246.035	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Not Stated	Notes copper and zinc are introduced from building materials as well as the use of roads and it will be extremely difficult to separate out different contributing land uses introducing contaminant load into a stormwater system. Considering transport networks as a discrete system will be challenging in terms of design standards, operations and managing and consenting.	Not stated
S257 Kāinga Ora	S257.018	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Generally supports this policy framework but seeks recognition of, and a pathway for, the development and implementation of catchment/sub-catchment Stormwater Management Plans for other entities outside of local authority and State Highway networks.	Not stated
S275 The New Zealand Transport Agency	S275.018	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Notes policy P.P12(a) specifies numeric limits but has no time frame and applies equally to local authority and state highway networks. Considers policies WH.P13 (d) and P.P12(e) should be modified to reflect the scale of consent proposed. Considers policies WH.P13 (e) and P.P12(f) should be addressed as consent condition where appropriate, with regional modelling and monitoring.	Modify WH.P13 (d) and (e) to reflect varying consent application scale and to address monitoring on a consent by consent basis respectively. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S286 Taranaki Whānui	S286.044	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Supports use of stormwater management strategies to achieve freshwater outcomes, particularly the prioritisation of outcomes with regard to Schedule C (mana whenua) sites or mahinga kai.	Amend policy: Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy Stormwater discharges from local authority and state highway networks shall be managed by: (a) reducing the copper and zinc loads in discharges to coastal water management units to contribute to meeting the coastal water objectives to maintain or

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					<p>improve, and</p> <p>(b) reducing the concentration and contaminant loads of copper and zinc from discharges to surface water bodies in order to maintain, and in degraded part Freshwater Management Units improve, the water quality state for dissolved copper and zinc to contribute to meeting the target attribute states in those part Freshwater Management Units, and</p> <p>(c) supporting the achievement of any reducing contaminant loads to achieve other relevant target attribute states or coastal water objectives including for ecosystem health, nutrients, visual clarity and Escherichia coli or enterococci, and</p> <p>(d) implementing a stormwater management strategy and stormwater management plans prepared in accordance with the information and requirements set out in Schedule 31 (stormwater strategy - whaitua), and</p> <p>(e) monitoring and modelling the stormwater network to identify catchments to be prioritised, the copper and zinc concentrations and loads in the discharge, and changes in discharge volume and quality over time following improvements in the network infrastructure, and</p> <p>(f) prioritising the reduction, removal, and/or treatment of stormwater discharges to Schedule A (outstanding water bodies) or Schedule C (mana whenua) sites, or mahinga kai sites.</p>
S2 Horokiwi Quarries Ltd	S2.022	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	<p>Seeks consequential amendments to the policy in line with the relief sought in relation to the submission point seeking a new definition of Greenfield Development.</p> <p>Changes sought include defining "greenfield development" and referencing urban development as being the activity the policy relates.</p> <p>Requests the terms rain gardens and</p>	<p>Amend Policy WH.P14 as follows:</p> <p>Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces</p> <p>The adverse effects of stormwater discharges from new greenfield development shall be minimised, and adverse effects of stormwater discharges from existing urban areas caused by urban development reduced to the extent practicable, upon redevelopment, through implementing:</p> <p>(a) an on-site stormwater treatment system or an off-site communal stormwater treatment system that is designed to:</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				bioretention devices as referenced in Clause (a)(ii) be defined.	(i) receive at least 85% of the mean annual runoff volume stormwater generated from new and redeveloped impervious surfaces of the property, and (ii) achieve copper and zinc load reductions factors equivalent to that of a raingarden/bioretention device, and (b) where stormwater discharges will enter a river, hydrological controls either on-site, or off-site via a communal And Amend the definitions section to include a definition of "raingarden" and "bioretention device".
S33 Wellington City Council	S33.046	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Oppose	Considers proposed framework does not promote integrated management and will result in consenting overlap without evidence of improved resource management outcomes. Identifies that development discharges are already managed via a global stormwater discharge consent, and that the WCC PDP proposes to manage on-site stormwater for s9 land uses which includes both water quality and water quantity management. Considers that the regional plan rule framework duplicates consenting requirements, and recommends the NRP stays silent on this and GWRC focus on higher-level management of discharge consents, including stormwater not connected to a local authority stormwater network.	Delete policy as notified.
S38 Summerson Group Holdings Limited	S38.007	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Submits that as the cost of the 85% treatment requirement on landowners/ developers, and the impacts on housing supply in the region has not been sufficiently assessed in the Section 32 Evaluation, it is potentially inconsistent with the NPS-UD.	Review 85% treatment requirement based on complete economic analysis including impacts on housing and business land supply throughout the region.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S101 Wellington International Airport Limited	S101.050	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Oppose	Refers to submission points raised with respect to Policy WH.P2: "new greenfield development", noting "existing urban areas" and "redevelopment" are not defined terms. Considers it is not clear how this policy is intended to interact and be applied in light of Policies such as WH.P12 which relate to airports and the broader objectives applying to regionally significant infrastructure more broadly (such as Objective O9 and O10).	Specifically exclude application of the policy to Airports (and possibly Ports) as they are already captured by proposed Policy WH.P12 and Operative Policy 89. Amend the chapeau to read "... through implementing, as far as reasonably practicable ": to recognise that (a) and (b) do not fit well with other forms of development, such as regionally significant infrastructure. Or delete and revert to Operative NRP.
S116 Taumata Arowai	S116.037	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Notes policies and rules that establish requirements for wastewater and stormwater networks provide clarity to network operators and will have a bearing on the quality and quantity of contaminant discharge. Considers that complementary provisions between the RMA, WSA and WSEA are well aligned, efficient, effective, and duplication is avoided where possible. Suggests a solution may be signalling the relationship between the different legislative requirements and how a single product (e.g. a stormwater management strategy) might be developed, reviewed and implemented, to meet both.	Provisions that interface with complementary Taumata Arowai duties and powers are well aligned, efficient and effective, and unnecessary duplication is avoided.
S151 Wellington Water Ltd	S151.083	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Supports the intent of this policy, but is unsure if a mean annual runoff target is the most appropriate measure. Queries whether this should be mean rather than median, and how easy this will be for developers or Wellington Water to assess compliance. Considers ready made 'acceptable solutions' may be easier to implement.	Review policy, in particular the reference to mean annual runoff, to ensure that the policy imposes targets that are readily measurable, able to be easily implemented, and clearly relate to the effects of runoff on the environment. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S177 Transpower New	S177.022	Policy WH.P14: Stormwater discharges	Amend	Notes raingardens and bioretention devices are not defined terms in the plan and both terms need to be added to Plan to provide certainty for users.	Amend the definitions section to include a definition of "raingarden" and "bioretention device".

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Zealand Limited		from new and redeveloped impervious surfaces.			
S183 Yvonne Weeber	S183.204	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Support	Not stated	Not stated

S193 Wairarapa Federated Farmers	S193.078	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Amend for improved clarity	Amend chapeau to read new urban greenfield development Make any consequential amendment(s) necessary to give effect to the relief sought
S206 Winstone Aggregates	S206.041	Policy WH.P14: Stormwater discharges from new and	Amend	Seeks consequential amendments in accordance with the submitter's relief sought for the insertion of a definition for "greenfield development".	Amend policy as follows: Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces The adverse effects of stormwater discharges from

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		redeveloped impervious surfaces.			<p>new greenfield development shall be minimised, and adverse effects of stormwater discharges from existing urban areas caused by urban development reduced to the extent practicable, upon redevelopment, through implementing:</p> <p>(a) an on-site stormwater treatment system or an off-site communal stormwater treatment system that is designed to:</p> <p>(i) receive at least 85% of the mean annual runoff volume stormwater generated from new and redeveloped impervious surfaces of the property, and</p> <p>(ii) achieve copper and zinc load reductions factors equivalent to that of a raingarden/bioretention device, and</p> <p>(b) where stormwater discharges will enter a river, hydrological controls either on-site, or off-site via a communal</p>
S207 Firth Industries Limited	S207.010	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Seek amendments to policy in line with submission on "unplanned greenfield development" definition - defining "greenfield development"	<p>Amend policy WH.P14 as follows:</p> <p>Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces</p> <p>The adverse effects of stormwater discharges from new greenfield development shall be minimised, and adverse effects of stormwater discharges from existing urban areas reduced to the extent practicable, upon redevelopment, through implementing:</p> <p>(a) an on-site stormwater treatment system or an off-site communal stormwater treatment system that is designed to:</p> <p>(i) receive at least 85% of the mean annual runoff volume stormwater generated from new and redeveloped impervious surfaces of the property, and</p> <p>(ii) achieve copper and zinc load reductions factors equivalent to that of a raingarden/bioretention device, and</p> <p>(b) where stormwater discharges will enter a river, hydrological controls either on-site, or off-site via a communal stormwater treatment system.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S209 Enviro NZ Services Ltd (Enviro NZ)	S209.012	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Questions the degree of maintenance or enhancement of stormwater quality required to meet the policy. Considers treatment may not always be necessary, particularly where increase in impervious areas is minimal.	Amend policy to allow for practical achievement and allow for where treatment is already in place.
S210 Guildford Timber Company Limited, Silverstream Forest Limited and the Goodwin Estate Trust.	S210.030	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Support	Supports Policy WH.P14	Retain WH.P14 as notified
S219 Cuttriss Consultant s Ltd	S219.010	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	<p>Considers there will be instances where it is not practicable to achieve hydrological controls i.e. when retention is not possible and there are low infiltration rates, more water will be discharged to a water network, even though the peak flows are being contained.</p> <p>Considers source control measures should be included in this policy as they are a way of reducing copper and zinc loads.</p>	Amend policy wording to remove (b) and replace (b) where stormwater discharges will enter a river, hydrological controls either on-site, or off-site via a communal stormwater treatment system (b) Source control techniques that result in copper and zinc load reductions equal to or greater than what would be achieved through on-site or communal stormwater treatment systems or devices designed in accordance with (a).
S220 Rosco Ice Cream Ltd	S220.012	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Oppose	Opposes the policy. Notes the policy does not specify at what rate/frequency the stormwater treatment is to be achieved. Considers it is not clear from the policy whether the stormwater treatment system is to accommodate the annual rainfall at once, or whether the treatment is achieved over a daily,	The design and sizing of a stormwater treatment system should be based on the average weekly rainfall.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				weekly or monthly period. Considers that the design and sizing of a stormwater treatment system should be based on the average weekly rainfall.	
S225 Upper Hutt City Council	S225.077	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Supports intent of improving water quality by managing stormwater contaminants, but considers thresholds for application must be reviewed and clarified. Concerned with application of definition for 'redevelopment' in policy, particularly in case of resurfacing, or 'like for like' replacement of surfaces where there is no change to end state water run-off. Considers it inappropriate and unjust to require onsite stormwater systems to be installed, due to the 'like for like' replacement of impervious surfaces. Considers this places unnecessary burden on land owners seeking to undertake maintenance of their properties.	Amend the definition of redevelopment and review the practicality of thresholds where this policy applies.
S226 Higgins Contractors Limited	S226.007	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Higgins support stormwater management from impervious surfaces in general but considers clarification is needed. Policy text considers new or redeveloped impervious surfaces from greenfield and existing urban areas only but rule framework from policy includes all sites. Intent of the policy and how this translates into rule framework for small non-urban sites is unclear.	New policy relating to stormwater from new and impervious surfaces from industrial or commercial sites.
S241 Pukerua Property Group Ltd	S241.011	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Considers using stormwater control to effectively manage or prevent land use is not consistent with integrated management principles contained in RMA.	Withdraw PC1. If PC1 not withdrawn, delete objectives and policies using stormwater controls to manage or prevent land use. If objective and policies are not deleted, they should be amended to remove avoidance principles and replaced with objectives and policies with same effect/guidance as remainder of PC1 before notification with perhaps some policy relief for activities

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					that require consent under operative provisions (in force before PC1).
S243 Land Matters Limited	S243.005	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Considers use of stormwater control to effectively manage or prevent land use inconsistent with integrated management principles contained in RMA.	Seeks objectives and policies be deleted or amended to provide opportunities for development within Porirua Whaitua. If not deleted, requests objectives and policies be amended to remove avoidance principles and be replaced with objectives and policies of same effect/guidance as NRP before notification with some policy relief for activities that require consent under the operative provisions.
S245 Tama Potaka, Minister of Conservation	S245.012	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Supports the intent of the policy but it needs to be consistent with NZCPS Policy 23.	Amend Policies to be consistent with NZCPS Policy 23
S247 Carrus Corporation Ltd	S247.010	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Considers there will be instances where it is not practicable to achieve hydrological controls i.e. when retention is not possible and there are low infiltration rates, more water will be discharged to a water network, even though the peak flows are being contained. Considers source control measures should be included in this policy as they are a way of reducing copper and zinc loads.	Amend policy wording to remove (b) and replace (b) where stormwater discharges will enter a river, hydrological controls either on-site, or off-site via a communal stormwater treatment system (b) Source control techniques that result in copper and zinc load reductions equal to or greater than what would be achieved through on-site or communal stormwater treatment systems or devices designed in accordance with (a).
S248 Ara Poutama Aotearoa the Department of	S248.022	Policy WH.P14: Stormwater discharges from new and redeveloped	Amend	Notes raingardens and bioretention devices referred to in Clause (a)(ii) are not defined terms in the plan and both terms need to be added to Plan to provide certainty for users.	Amend definitions section to include a definition of "raingarden" and "bioretention device".

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
Corrections		impervious surfaces.			
S252 Thames Pacific	S252.010	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	<p>Considers there will be instances where it is not practicable to achieve hydrological controls i.e. when retention is not possible and there are low infiltration rates, more water will be discharged to a water network, even though the peak flows are being contained.</p> <p>Considers source control measures should be included in this policy as they are a way of reducing copper and zinc loads.</p>	Amend policy wording to remove (b) and replace (b) where stormwater discharges will enter a river, hydrological controls either on-site, or off-site via a communal stormwater treatment system (b) Source control techniques that result in copper and zinc load reductions equal to or greater than what would be achieved through on-site or communal stormwater treatment systems or devices designed in accordance with (a).
S255 Woodridge Holdings Ltd	S255.028	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Oppose	<p>Considers "to the extent practicable" is vague and provides no clarity as to when stormwater treatment systems will and won't be required.</p> <p>Item (a)(i) requires 85% of the mean annual runoff volume of stormwater to be treated but no allowance is provided for treating to a higher level, where that is possible. Considers this encourages people to do the minimum but incentivising through rates relief or reduced financial contribution payments could result in a higher level of treatment.</p> <p>Item (a) (ii) requires the installed stormwater treatment systems to "achieve copper and zinc load reductions factors equivalent to that of a raingarden. Bioretention device". but the targeted reduction for sediment zinc and copper in Tables 9.3 is 40% and Table 1 in Schedule 28: Stormwater Containment Treatment shows a 90% reduction. So Item (a) (ii) is in effect seeking a 90% reduction in copper and zinc discharges from a site to achieve the goal of</p>	<p>Remove all vague wording and/or advise what "to the extent practicable" means.</p> <p>Provide incentives for treating more than 85% of the mean annual runoff volume of stormwater.</p> <p>Reduce the targeted reduction in copper and zinc per site to 40% or provide some form of financial compensation of achieving a higher treatment rate.</p> <p>Make the wording of (a)(ii) clear by specifying the percentage reduction required for copper and zinc rather than referring to reductions equivalent to a rain garden.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>reducing instream concentrations by 40%. Considers a 90% reduction of a site is onerous and as it is a larger reduction than necessary to achieve the goal in relation to the site. Considers development achieving more than a 40% reduction as required for their property should be compensated via rates relief or reductions in any financial contributions payable.</p>	
S257 Kāinga Ora	S257.019	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Oppose	<p>Generally supports provisions that seek to minimise the adverse effects of stormwater discharge on the environment but notes the 85% requirement as proposed by the policy introduces a significant cost to developers of a site. Concerned that this policy reads like a rule, would be difficult to achieve through redevelopment of existing urban environments, and could discourage brownfield redevelopment. Notes the policy is framed as if all impervious surfaces are in fact holding contaminants needing to be treated and considers this is a high and unreasonable test which will be costly to implement. Considers the focus should be more on those areas which contaminant loading is higher (i.e. roads with high vehicle use, large carpark areas, industrial areas). Seeks amendment to provisions to recognise a pathway for the creation and implementation of Stormwater Management Plans for other entities outside of local authority and State Highway networks.</p>	<p>Amendments sought Review policy drafting to ensure it is more "policy focused". Consequential amendments are sought to reflect changes sought in associated rules Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S258 BP Oil NZ Ltd, Mobil Oil NZ Ltd, Z Energy Ltd - The Fuel Companies	S258.016	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Support	Supports WH.P14	Retain Policy WH.P14 as notified.
S260 Cannon Point Development Limited (Ltd.)	S260.005	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Supports policy if relief sought in relation to the definition of unplanned greenfield development is accepted.	Retain only if the relief sought in relation to the definition of unplanned greenfield development is accepted.
S261 Forest & Bird	S261.075	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Considers reducing adverse effects to "the extent practicable" enables cost considerations to be factored into decision-makers, which often avoid more environmentally responsible approaches. Considers reference to "where possible" is required.	Amend as follows: The adverse effects of stormwater discharges from new greenfield development shall be minimised, and adverse effects of stormwater discharges from existing urban areas reduced to the extent possible practicable . Insert direction requiring water sensitive design for new and redeveloped areas. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S282 Pat van Berkel	S282.016	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Notes that impervious surfaces are assumed and there is no requirement for permeable surfaces.	Add a new condition WH.P14 (a): include permeable surfaces where possible (eg, for minor roads, carparks, footpaths).
S286 Taranaki Whānui	S286.045	Policy WH.P14: Stormwater discharges from new and	Amend	Supports management of stormwater discharges through hydrological control and water sensitive urban design measures. Supports recognition of catchment-scale	Develop a more comprehensive framework for hydrological control and water sensitive urban design measures, including acceptable technical solutions.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		redeveloped impervious surfaces.		communal schemes which may be more efficient than numerous small systems on individual sites. Considers PC1 does not contain sufficient direction on how measures will be implemented and does not set out what would be considered an acceptable solution to comply. Considers if technical specifications were included, it would mean that smaller developments could rely on these without having to develop expensive bespoke solutions on site by-site basis.	
S2 Horokiwi Quarries Ltd	S2.023	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Amend	<p>Seeks this policy be amended so it's consistent with the effects management hierarchy set out in the NPS-FM, which requires that aquatic offsetting or compensation is provided in circumstances where residual adverse effects are more than minor.</p> <p>Suggests financial contributions should not be a mandatory means of providing for aquatic offsetting, and resource consent applicants should have a reasonable opportunity to provide aquatic offsetting or compensation in accordance with Appendix 6 or 7 of the NPS-FM as part of their proposal.</p> <p>Considers the policy (and associated rules) implies that "an existing or new stormwater network" is a receiving environment, however, Stormwater networks are piped, and therefore, any water within a stormwater network is not considered 'water' or subject to the Regional Council's jurisdiction. States that while the rule may apply to stormwater discharges to a surface waterbody from a stormwater network, it</p>	<p>Amend Policy WH.P15 as follows: Policy WH.P15: Stormwater contaminant offsetting or compensation for new greenfield development Where there are more than minor residual adverse effects of residual (posttreatment) caused by stormwater contaminants from new greenfield development, roads (not already captured as part of a greenfield development) and state highways where the discharge will enter a surface water body or coastal water, including via from an existing or new stormwater network, those effects must be managed by way of an aquatic offset or aquatic compensation, including through the following:</p> <p>(a) are to be provide an aquatic offset by way of a financial contribution in accordance with Schedule 30 (financial contribution), or</p> <p>(b) provide an aquatic offset in accordance with the principles for aquatic offsetting in Appendix 6 of the NPS-FM, and</p> <p>(c) where more than minor residual adverse effects cannot be offset, aquatic compensation must be provided in accordance with the principles for aquatic compensation in Appendix 7 of the NPS-FM.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				cannot manage effects before this point. Requests that if reference is to be retained, it be clarified as being "from" the stormwater network to ensure the policy and associated rules are not ultra vires.	
S33 Wellington City Council	S33.047	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	Opposes the double-up in contributions being made for development, and considers this confuses the process for Territorial Authorities contributions which would go to the same water services entity to go towards catchment scale stormwater infrastructure management. Considers there is a high risk of duplication, which does not promote integrated management.	Delete policy as notified.
S38 Summerson Group Holdings Limited	S38.008	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	Considers the policy is inconsistent with the NPS-UD including Policy 8 as the cost of the approach proposed on landowners/developers and its impacts on housing supply in the region has not been sufficiently assessed in the Section 32 Evaluation. Questions how the policy interacts with the prohibited activity approach for unplanned greenfield development.	Delete policy: Policy WH.P15: Stormwater contaminant offsetting for new greenfield development The adverse effects of residual (post-treatment) stormwater contaminants from new greenfield development, roads (not already captured as part of a greenfield development) and state highways where the discharge will enter a surface water body or coastal water, including via an existing or new stormwater network, are to be offset by way of a financial contribution in accordance with Schedule 30 (financial contribution).
S43 Fulton Hogan Ltd	S43.011	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	Concerned the broadness of the policy will discourage investment in water quality treatment. Considers the policy does not recognise different hardstand areas differ in contaminant loading. Considers financial contributions make more sense in developed catchments.	Reconsider the stormwater contribution approach.
S101 Wellington International Airport Limited	S101.051	Policy WH.P15: Stormwater contaminant offsetting for	Oppose	Refers to submission on WH.P2 and Policy WH.P14 and the rationale for excluding the Airport from the definition of "new greenfield development" and related terms. Notes the operational and functional	Expressly exclude the regionally significant infrastructure or other development of Open Space Zones that are generally consistent with the outcomes of the zone from the definition of "new greenfield development" and associated definitions. Exclude the Airport from any financial contributions set

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		new greenfield development.		<p>requirements of some regionally significant infrastructure necessitate large impermeable surfaces which stormwater management systems are designed into.</p> <p>Considers the policy will potentially result in "double dipping", with financial contributions already able to be considered by Wellington City Council via the resource consent, building consent and service connection process.</p> <p>Notes residual effects of an activity are typically considered during the resource consent process and if the effects on the environment are suitably managed, it is inappropriate to require all residual effects to be offset by financial contribution.</p> <p>Considers Schedule 30 financial contributions are payable for an effect that does not necessarily arise from the discharge consent is being sought for which is inappropriate and unlawful.</p> <p>Considers it is unduly onerous to require financial contributions for residual effects from the Airport given the significant contribution it makes towards the social and economic wellbeing of the community.</p> <p>Notes there is no definition of "new greenfield development" therefore application of this policy is unclear, uncertain and inappropriate.</p>	<p>out in this policy and Schedule 30.</p> <p>Or delete and revert to Operative NRP.</p>
S116 Taumata Arowai	S116.038	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Amend	<p>Notes policies and rules that establish requirements for wastewater and stormwater networks provide clarity to network operators and will have a bearing on the quality and quantity of contaminant discharge. Considers that complementary provisions between the RMA, WSA and WSEA are well aligned,</p>	<p>Provisions that interface with complementary Taumata Arowai duties and powers are well aligned, efficient and effective, and unnecessary duplication is avoided.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				efficient, effective, and duplication is avoided where possible. Suggests a solution may be signalling the relationship between the different legislative requirements and how a single product (e.g. a stormwater management strategy) might be developed, reviewed and implemented, to meet both.	
S151 Wellington Water Ltd	S151.084	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Support	Supports this provision as achieving freshwater quality outcomes	Not stated
S161 GILLIES GROUP MANAGEMENT LTD	S161.013	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	Opposes the proposed financial contributions framework. Recognises the importance of managing stormwater contaminants, however considers financial contribution requirements burdensome, hindering greenfield development, housing availability and affordability. Considers costs to landowners/developers are not assessed, including flow-on impacts on housing supply and affordability, and consequential effects on commercial viability to provide for urban growth. Considers a mandatory flat fee financial contribution may incentivise large lots over intensification. Considers the policy relies on financial contributions without consideration for alternatives or acknowledgement of changes in land use that may improve water quality, highlighting limitations due to stormwater contaminant treatment only being practicable for a portion of the contaminant load. Highlights lack of clarity on the feasibility, effectiveness and timing of mechanisms outlined in the	Delete policy

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				schedule. Opposes clarification from GWRC that financial contributions will be required for developments achieving reductions greater than 85%. Considers the proposed contributions are not effects-based.	
S165 PUKERUA HOLDINGS LIMITED	S165.013	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	Opposes the new framework relating to financial contributions in section 30. Concerned that financial contributions will hinder greenfield developments, impact housing availability and affordability, and PC1 does not assess these costs. Concerned mandatory blanket financial contribution will incentivise the development of large lots rather than intensification. Considering that acknowledging stormwater contamination is only practicable for a portion of the contaminant load shows the limitations of the proposed solution. Concerned stormwater contaminant treatment shows an overreliance on financial contribution without adequately exploring alternatives. as land use changes could improve water quality. Considers the proposed financial contribution to offset residual stormwater deterioration should not be the only option and is not the most equitable or efficient approach. Considers anticipating potential water quality deterioration, as outlined in Policy WH.P15 and P.P13, should prompt a more comprehensive exploration of solutions beyond relying solely on financial contributions. Considers the feasibility, timing and effectiveness of catchment-scale stormwater treatment systems unclear. Strongly opposes the application of a mandatory fee even if a development achieves greater than 85% reduction.	Delete policy

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Considers the proposed contribution is inconsistent with the purported purpose outlined by the GWRC.	
S169 KORU HOMES NZ LIMITED	S169.008	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	<p>Opposes financial contributions framework in Schedule 30. Considers imposing financial contributions is a burden that may hinder greenfield development growth impacting housing availability, housing supply costs and housing affordability. concerned that PC1 does not assess the costs to land owners/developers or the consequences for housing supply/affordability. Notes that financial contributions dictate the viability of developments for the private sector. Notes the importance of the private sector to provide housing supply and how financial contributions dictate commercial viability of developments.</p> <p>Concerned the flat financial contribution fee would incentivise large lot developments rather than intensification. Considers the acknowledgement that stormwater contaminant treatment is only practicable for a portion of the contaminant load demonstrates the limitations of the proposed solution.</p> <p>Believes the policy heavily relies on financial contributions without consideration for alternatives or new developments that improve water quality. Concerns the use of financial contributions to offset stormwater contamination is not equitable or efficient. Considers Policy WH.P15 and P.P13 anticipate a potential deterioration in water quality and this should prompt exploration of solutions rather than relying on financial contributions.</p>	Delete Policy WH.P15

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Concerned the feasibility, effectiveness and timing of catchment-scale stormwater treatment systems referenced in Schedule 30 is unclear Opposes GWRC's requirement for financial contributions even if a development could achieve an 85% reduction or more. Believes there is no effects-based reason for the charging of the proposed contribution.	
S173 ARAKURA PLAINS DEVELOP MENT LIMITED	S173.013	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	Opposes the proposed financial contributions framework. Recognises the importance of managing stormwater contaminants, however considers financial contribution requirements burdensome, hindering greenfield development, housing availability and affordability. Considers costs to landowners/developers are not assessed, including flow-on impacts on housing supply and affordability, and consequential effects on commercial viability to provide for urban growth. Considers a mandatory flat fee financial contribution may incentivise large lots over intensification. Considers the policy relies on financial contributions without consideration for alternatives or acknowledgement of changes in land use that may improve water quality, highlighting limitations due to stormwater contaminant treatment only being practicable for a portion of the contaminant load. Highlights lack of clarity on the feasibility, effectiveness and timing of mechanisms outlined in the schedule. Opposes clarification from GWRC that financial contributions will be required for developments achieving reductions greater than 85%. Considers	Delete policy

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				the proposed contributions are not effects-based.	
S177 Transpower New Zealand Limited	S177.023	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Amend	<p>Considers policy be amended so that its consistent with effects management hierarchy set out in NPS-FM, which requires aquatic offsetting or compensation is provided in circumstances where residual adverse effects are more than minor.</p> <p>Considers financial contributions should not be a mandatory means of providing aquatic offsetting, and resource consent applicants should have reasonable opportunity to provide aquatic offsetting or compensation in accordance with Appendix 6 or 7 of NPS-FM as part of proposals.</p>	<p>Amend as follows:</p> <p>Policy WH.P15: Stormwater contaminant offsetting or compensation for new greenfield development The More than minor adverse effects of residual (post-treatment) stormwater contaminants from new greenfield development, roads (not already captured as part of a greenfield development) and state highways where the discharge will enter a surface water body or coastal water, including via an existing or new stormwater network, are to be offset by way of: (a) aquatic offsetting or compensation in accordance with Appendix 6 or 7 of the National Policy Statement on Freshwater Management 2020; or (b) a financial contribution in accordance with Schedule 30 (financial contribution).</p>
S183 Yvonne Weeber	S183.205	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Support	Not stated	Not stated
S188 Wellington Fish and Game Regional Council	S188.051	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Not Stated	Considers financial contributions be set at a level that reflects costs of improvements and upgrades to stormwater systems to allow for improvements in effects of stormwater on receiving waterbodies. Considers contributions will have to be flexible, as costs of repairs, maintenance, and upgrades change in response to global economics, supply and demand.	Not stated
S193 Wairarapa Federated Farmers	S193.079	Policy WH.P15: Stormwater contaminant	Amend	Amend for clarity	Amend chapeau to read new urban greenfield development.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		offsetting for new greenfield development.			Make any consequential amendment(s) necessary to give effect to the relief sought.
S206 Winstone Aggregates	S206.042	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Amend	<p>Considers financial contribution provisions inconsistent with the NPS-FM, and limits the ability to implement the effects management hierarchy. Notes that aquatic offsetting or compensation is required by the NPS-FM where there are more than minor residual adverse effects, rather than residual adverse effects generally. Considers a contribution mechanism to address minor/residual effects unlikely to be effective or efficient, and concerned that financial contributions are the only form of offset that may be provided. Considers it contrary to the NPS-FM to not allow consideration for the principles set out in Appendix 6 of the NPS-FM. Notes the provisions limit the management of residual adverse effects to aquatic offsetting only, whereas the effects management hierarchy provides for aquatic compensation where aquatic offsetting is not able to be provided. Acknowledges financial contributions may be an appropriate form of aquatic offset, however seeks the policy does not frustrate the ability for other forms of aquatic offsetting or aquatic compensation.</p> <p>Considers the policy and associated rules imply "an existing or new stormwater network" is a receiving environment, noting that they are piped and therefore not considered "water" or subject to Regional Council jurisdiction. Considers that rule may apply to stormwater discharges to a surface</p>	<p>Amend policy as follows:</p> <p>Policy WH.P15: Stormwater contaminant offsetting for new greenfield development Where there are more than minor residual adverse effects of residual (post-treatment) caused by stormwater contaminants from new greenfield development, roads (not already captured as part of a greenfield development) and state highways where the discharge will enter a surface water body or coastal water, including via from an existing or new stormwater network, those effects must be managed by way of an aquatic offset or aquatic compensation, including through the following:</p> <p>(a) are to be provide an aquatic offset by way of a financial contribution in accordance with Schedule 30 (financial contribution), or</p> <p>(b) provide an aquatic offset in accordance with the principles for aquatic offsetting in Appendix 6 of the NPS-FM, and</p> <p>(c) where more than minor residual adverse effects cannot be offset, aquatic compensation must be provided in accordance with the principles for aquatic compensation in Appendix 7 of the NPS-FM.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>waterbody from a stormwater network, but can not manage effects before that point. Considers if the reference is retained, that it must be clarified as being "from" the stormwater network.</p> <p>Seeks consequential amendments per the submitter's submission point for the definition of "greenfield development".</p>	
S207 Firth Industries Limited	S207.011	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Amend	<p>The financial contribution requirement is inconsistent with NPS-FM and limits ability to implement the effects management hierarchy. Aquatic offsetting or aquatic compensation are required where effects are more than minor. Effects are expected and appropriate where effects are no more than minor. Clause implies financial contributions are only form of offsetting provided. Appendix 6 of the NPS-FM sets out principles that are to be applied when identifying an appropriate aquatic offset and it would be contrary to the NPS-FM to not allow for consideration against those principles. Seeks the policy does not frustrate the ability for other forms of aquatic offsetting or aquatic compensation to be undertaken.</p> <p>The policy can only regulate discharges where they enter "water" in accordance with section 15 of the RMA. The policy and rules imply "an existing or new stormwater network" is a fresh water receiving environment. Stormwater networks are piped and water within a stormwater network is not considered 'water' or subject to Regional Council's jurisdiction. Therefore the reference to "via an existing local authority stormwater network" must be removed</p>	<p>Amend policy WH.P15 as follows:</p> <p>Policy WH.P15: Stormwater contaminant offsetting or compensation for new greenfield development The Where there are more than minor residual adverse effects of residual- (post-treatment) stormwater contaminants from new greenfield development, roads (not already captured as part of a greenfield development) and state highways where the discharge will enter a surface water body or coastal water, including via from an existing or new stormwater network, those effects must be managed by way of an aquatic offset or aquatic compensation, including through the following:</p> <p>(a) are to be provide an aquatic offset by way of a financial contribution in accordance with Schedule 30 (financial contribution), or (b) provide an aquatic offset in accordance with the principles for aquatic offsetting in Appendix 6 of the NPS-FM, and (c) where more than minor residual adverse effects cannot be offset, aquatic compensation must be provided in accordance with the principles for aquatic compensation in Appendix 7 of the NPS-FM.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>from the policy. If reference to the stormwater network is to be retained, this must be clarified as being "from" the stormwater network (rather than "via") to ensure that the policy and rules are not ultra vires.</p> <p>Amendments also account for defined term of "greenfield development" as per submission on the definition of "unplanned greenfield development".</p>	
S210 Guildford Timber Company Limited, Silverstream Forest Limited and the Goodwin Estate Trust.	S210.031	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Support	Supports Policy WH.P15	Retain WH.P15 as notified
S225 Upper Hutt City Council	S225.078	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	Concerned with financial implications on Requiring Authorities (particularly territorial authorities). Refer to comments on new financial contributions provisions in Schedule 30.	Delete the policy or amend substantially so that this does not place an unrealistic burden on greenfield development that is needed to meet the higher order national direction of the NPS-UD.
S236 Parkvale Road Limited	S236.007	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	<p>Opposes approach towards financial contributions under schedule 30 and all associated provisions as it will impact housing affordability and is based on a flat fee basis regardless of catchment, scale of development, consideration of existing environment, or consideration of how effective onsite stormwater treatment may be.</p> <p>Concerned that it is unclear from PC1</p>	Delete the policy

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				aquatic offsetting, and resource consent applicants should have reasonable opportunity to provide aquatic offsetting or compensation in accordance with Appendix 6 or 7 of NPS-FM as part of proposals.	or new stormwater network, are to be offset by way of: (a) aquatic offsetting or compensation in accordance with Appendix 6 or 7 of the National Policy Statement on Freshwater Management 2020; or (b) a financial contribution in accordance with Schedule 30 (financial contribution).
S251 Peka Peka Farm Limited	S251.006	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	Opposes financial contribution approach as set out in proposed Schedule 30 and all associated provisions.	Delete the policy. Policy WH.P15: Stormwater contaminant offsetting for new greenfield development. The adverse effects of residual (post treatment) stormwater contaminants from new greenfield development, roads (not already captured as part of a greenfield development) and state highways where the discharge will enter a surface water body or coastal water, including via an existing or new stormwater network, are to be offset by way of a financial contribution in accordance with Schedule 30 (financial contribution).
S255 Woodridge Holdings Ltd	S255.029	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	WH.P14(a)(i) requires 85% of the mean annual runoff volume of stormwater to be treated. No allowance is provided for treating to a higher level, where that is possible. Considers this encourages people to do the minimum but incentivising through rates relief or reduced financial contribution payments could result in a higher level of treatment.	Provide incentives for treating more than 85% of the mean annual runoff volume of stormwater.
S257 Kāinga Ora	S257.020	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	Opposes the financial contribution framework for greenfield development. Considers the broader provisions and regulatory framework of PC1 significantly onerous, and the further imposition of financial contributions will further limit the supply of affordable housing.	Delete policy and rules associated in regard to the requirement to pay financial contributions; Alternatively, Review financial contributions to enable consideration and account for of network improvements undertaken in the relevant catchment (to which the proposal relates), where such works would enhance existing water quality outcomes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S261 Forest & Bird	S261.076	Policy WH.P15: Stormwater	Oppose	Considers higher order direction, including the NZCPS and NPSM, do not provide for offsetting and compensation	Amend to require adverse effects of residual stormwater contaminants to be "avoided, remedied, or mitigated" .

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		contaminant offsetting for new greenfield development.		as expressed in the policy. Considers financial contributions are compensation and not an offset.	Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S282 Pat van Berkel	S282.017	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Amend	Offsets may be used as a way of avoiding managing contaminants.	Add a note explaining how such avoidance is discouraged.
S286 Taranaki Whānui	S286.046	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Support	Support in principle.	Retain as notified.
S2 Horokiwi Quarries Ltd	S2.024	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	<p>Considers there is a lack of clarity (based on the definitions as notified) as to what activities the policy applies to, and its direction being based on an effect, rather than a land use.</p> <p>Considers there is insufficient evidence provided through the Section 32 evaluation to justify the strong policy directive and to suggest that all new stormwater discharges from unplanned greenfield develop will cause significant effects.</p>	Delete policy.
S33 Wellington City Council	S33.048	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Amend	Concerns regarding the prohibitive provisions framework and if it the most appropriate to achieve the objectives and policies of the NPS-FM 2020. Concerned the policy will hinder the rezoning of land with inappropriate 'legacy' zoning , including sites that could be converted to housing, community facilities, education facilities and not expand the current	Amend policy to allow for Discretionary activity status OR delete policy.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				urban boundary. Considers the prohibited activity status is not demonstrated through the s32 report as the most appropriate option to achieve the objectives of the plan, and that a Discretionary Activity status is more appropriate. Notes that as per case law prohibited activity class should not be used to defer an evaluation of a particular activity until such time as a plan change is lodged to allow undertaking the activity in question.	
S38 Summerseat Group Holdings Limited	S38.009	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	<p>Opposes the avoidance/prohibited approach being taken to greenfield development</p> <p>Concerned the activity status will provide no consenting pathway for proposals located in these areas that may have positive/better outcomes for the community, freshwater and intensive rural activities.</p> <p>Considers the use of a prohibited activity status is not justified in the Section 32 Evaluation and is not consistent with the NPS-UD.</p>	<p>Delete policy: Policy WH.P16: Stormwater discharges from new unplanned greenfield development Avoid all new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network.</p>
S96 Urban Edge Planning Group on behalf of M & J Walsh Partnership Ltd	S96.003	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	<p>Considers proposed policy too narrow due to lack of pathway other than avoidance. Considers effects could be managed.</p> <p>Questions why stormwater discharge from unplanned development differs from stormwater discharge from planned development with the underlying effects based approach. Submitter considers the effects the same and potentially manageable (e.g. through an effects management hierarchy).</p>	<p>Amend policy to provide pathway where effects of additional stormwater discharged can be managed.</p> <p>Any further changes needed to achieve the intention of this submission.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

S97 Urban Edge Planning Group on behalf of Coronation Real Estate Limited	S97.002	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Concerned the policy is too narrow as it does not provide a pathway or guidance other than avoidance. Questions why stormwater discharge from unplanned development differs from stormwater discharge from planned development with the underlying effects based approach. Submitter considers the effects the same and potentially manageable (e.g. through an effects management hierarchy)	Amend policy to provide a pathway where the effects from additional stormwater discharges can be managed appropriately. Any consequential changes or alternative relief required to achieve the intended outcomes sought within this submission.
S98 Urban Edge Planning Group on behalf of Pandion Limited	S98.005	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Not Stated	Opposes the proposed provisions that require the avoidance of all new stormwater discharges from unplanned greenfield development and make any use of land and associated discharge of stormwater from impervious surfaces from unplanned greenfield development a prohibited activity.	Not stated
S101 Wellington International Airport Limited	S101.052	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Refers to submission on WH.P2 and WH.P14. Concerned that such a strong policy directive could be used as rationale by a territorial authority for declining plan changes and resource consents or for recommending that a Notice of Requirement is withdrawn, despite regionally significant infrastructure often being subject to a different consent/approval process than most activities.	Amend the policy to address the issues raised. Or delete and revert to Operative NRP.
S110 Save Our Hills (Upper Hutt) Incorporated	S110.001	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Support	Seeks stormwater discharges from Upper Hutt City Council's (UHCC) proposed "Southern Growth Area (SGA)" (i.e. Guildford Timber Company's proposed development on Pinehaven Hills) are not permitted until the Pinehaven Stream baseline flood model has been rectified to ensure hydrological control, and the Pinehaven Floodplain Management Plan has been updated to	Do not allow any new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>incorporate the rectified Pinehaven Stream flood model.</p> <p>Considers if this is not done then hydrological control (including hydraulic neutrality) will not happen with consequences for the environment, for natural resources, private property, human life and public safety.</p> <p>Supports Map 88 which identifies the Upper Hutt City Council's proposed "Southern Growth Area" (i.e. Guildford Timber Company's proposed development on Pinehaven Hills) as "unplanned greenfield development".</p>	
S116 Taumata Arowai	S116.039	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Amend	<p>Notes policies and rules that establish requirements for wastewater and stormwater networks provide clarity to network operators and will have a bearing on the quality and quantity of contaminant discharge. Considers that complementary provisions between the RMA, WSA and WSEA are well aligns, efficient, effective, and duplication is avoided where possible.</p> <p>Suggests a solution may be signalling the relationship between the different legislative requirements and how a single product (e.g. a stormwater management strategy) might be developed, reviewed and implemented, to meet both.</p>	Provisions that interface with complementary Taumata Arowai duties and powers are well aligned, efficient and effective, and unnecessary duplication is avoided.
S161 GILLIES GROUP MANAGEMENT LTD	S161.014	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	<p>Opposes the avoidance/prohibited approach to greenfield development.</p> <p>Considers that prohibited activity status does not provide a consenting pathway to consider a proposal that may have positive outcomes for the community or for freshwater. Considers the prohibited activity status is inconsistent with the NPS-UD.</p>	Delete policy

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S165 PUKERUA HOLDINGS LIMITED	S165.014	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Opposes the avoidance/prohibiting approach to greenfield development. Concerned this activity status would provide no pathway for a proposal even if it had positive impacts on the community or freshwater. Considers the use of a prohibited activity status is not consistent with the NPS-UD as outlined above in this submission.	Delete definition
S169 KORU HOMES NZ LIMITED	S169.009	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Opposes the avoidance/prohibited approach to greenfield development as the prohibited activity status provides no consenting pathway for proposals that may have positive outcomes. Considers the consent status is inconsistent with the NPS-UD.	Delete Policy WH.P16
S173 ARAKURA PLAINS DEVELOP MENT LIMITED	S173.014	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Opposes the avoidance/prohibited approach to greenfield development. Considers that prohibited activity status does not provide a consenting pathway to consider a proposal that may have positive outcomes for the community or for freshwater. Considers the prohibited activity status is inconsistent with the NPS-UD.	Delete policy
S177 Transpower New Zealand Limited	S177.024	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Considers the definition of unplanned greenfield development is too broad and uncertain. Unclear if all development is prohibited or just specific kinds of urban development. Concerns the approach could prohibit works on regionally significant infrastructure (including the National Grid) in areas identified as "unplanned greenfield development areas". Concerned that the policies and rules of "unplanned greenfield development areas" may capture works on the national grid which would be contrary to Policy 14 and the objective of the NPSET.	Delete policy.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				Questions the efficiency and practicability of the proposed approach which creates jurisdictional overlap between territorial authorities, the regional council, and the Minister of Conservation)on the management of development in "unplanned greenfield development areas". Noting decisions on separate plan changes must be made separately and considers this will be highly inefficient for applicants and submitters and applicants and risks inconsistency. Considers the appropriate means of providing for a combined regulatory approach is through a combined planning document to address the issue, as per section 80 of the RMA. Considers the appropriate means of providing for a combined regulatory approach is through a combined planning document to address the issue, as per section 80 of the RMA. If the relief sought by submitter on definition of "unplanned greenfield development" is granted in full, submitter would consider adopting a neutral position on rule.	
S183 Yvonne Weeber	S183.206	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Considers offsetting of environmental damage caused by a new greenfield development will not improve the wai.	Not stated
S193 Wairarapa Federated Farmers	S193.080	Policy WH.P16: Stormwater discharges from new unplanned	Amend	Amend for clarity	Amend chapeau to read unplanned new urban greenfield development. Make any consequential amendment(s) necessary to give effect to the relief sought.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		greenfield development.			
S194 Urban Edge Planning Group on behalf of Mangaroa Farms Ltd	S194.004	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Neutral	Neutral stance is conditional on proposed definition not applying to rural based development within a Rural Lifestyle Zone. If this interpretation is incorrect, the submitter would oppose definition and related prohibited activity framework.	Ensure definition of unplanned greenfield development does not relate to development occurring in the rural environment, including the Rural Lifestyle Zone. Any consequential changes or alternative relief required to achieve the intended outcomes sought within this submission.
S206 Winstone Aggregates	S206.043	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Considers there is insufficient evidence in the s32 evaluation to justify the policy direction and to suggest that all new stormwater discharges from unplanned greenfield development will cause significant effects.	Delete policy
S207 Firth Industries Limited	S207.012	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Oppose policy entirely. Lack of evidence in Section 32 report to justify direction and suggest all new stormwater discharges from unplanned greenfield development will cause significant effects. Inappropriately targets land use without considering if land use will have significant adverse effects.	Delete policy.
S210 Guildford Timber Company Limited, Silverstream Forest Limited and the Goodwin Estate Trust.	S210.032	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Oppose policy and in particular the 'avoid' approach which directly leads to the prohibited activity Rule WH.R13. The submitter opposes the use of prohibited activity rules for the reasons given in PART ONE of the original submission. The submitters do not consider the implementation of the PC1 objectives requires or justifies the avoidance as the only option for managing stormwater discharges from unplanned greenfield development, and the subsequent prohibited activity rule approach. As per Submission Point #2 in the original	Delete Policy WH.P16 or amend as follows (or similar wording): " Avoid Ensure all new stormwater discharges from unplanned greenfield development avoid or minimise any adverse effects where the discharge will enter ... "

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				submission, the submitter seeks the policy be deleted from PC1 as it is not necessary to implement the objectives. Alternatively, if deletion is not accepted, submitters seek an amended to the policy to provide a more flexible effects management approach consistent with the objectives and other policies in PC1.	
S211 Hutt City Council	S211.015	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Considers that there is insufficient evidence to support Policy WH.P16. Considers that the policy duplicates WH.P2(a) and is therefore unnecessary.	Delete Policy WH.P16: Policy WH.P16: Stormwater discharges from new unplanned greenfield development. Avoid all new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network.
S217 R P Mansell; A J Mansell, & M R Mansell	S217.029	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Amend Oppose	Considers the use of the prohibited activity status for unplanned greenfield development is inappropriate, as the effects are not specified for any particular area. Considers this proposed approach is onerous, costly and will not achieve implementation of the NPS-UD. Considers that the current rules of the NRP and the proposed PC1 rules for planned greenfield development are sufficient to manage the adverse effects of unplanned greenfield development. Seeks for provisions which avoid or prohibit activities associated with unplanned greenfield development to be deleted.	Delete policy
S219 Cuttriss Consultants Ltd	S219.011	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Opposes use of the term "avoid". Opposes the requirement to seek two separate plan changes if land is to be rezoned.	Request policy is deleted. Policy WH.P16: Stormwater discharges from new unplanned greenfield development. Avoid all new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S220 Rosco Ice Cream Ltd	S220.013	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Notes this policy seeks to avoid all stormwater discharges to water from unplanned greenfield development (as mapped) and opposes this policy. Considers that an avoidance policy is too restrictive to be applied to such large areas of the City, even if they are non-urban.	Amend to a minimisation policy.
S225 Upper Hutt City Council	S225.079	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Concerns with implications and practicality of policy.	Delete policy or amend significantly to change from 'avoid' to 'minimise' and specifically this should not apply to developments that feed into an existing stormwater network that will have an existing stormwater consent.
S236 Parkvale Road Limited	S236.008	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Opposed approach towards unplanned greenfield development and considers approach contrary to requirements of NPS-UD, in particular Policies 1(d) and 8. Considers a prohibited activity status a disproportionate response that has been inadequately assessed in section 32 evaluation. Considers requiring a plan change to both a district and regional plan will impose significant costs (E.g. stormwater effects of an area of land of less than 4ha can be appropriately considered and addressed through a resource consent process).	Delete the policy
S241 Pukerua Property Group Ltd	S241.013	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Amend	Considers using stormwater control to effectively manage or prevent land use is not consistent with integrated management principles contained in RMA.	Withdraw PC1. If PC1 not withdrawn, delete objectives and policies using stormwater controls to manage or prevent land use. If objective and policies are not deleted, they should be amended to remove avoidance principles and replaced with objectives and policies with same effect/guidance as remainder of PC1 before notification with perhaps some policy relief for activities

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
					that require consent under operative provisions (in force before PC1).
S243 Land Matters Limited	S243.007	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Amend	Considers use of stormwater control to effectively manage or prevent land use inconsistent with integrated management principles contained in RMA.	Seeks objectives and policies be deleted or amended to provide opportunities for development within Porirua Whaitua. If not deleted, requests objectives and policies be amended to remove avoidance principles and be replaced with objectives and policies of same effect/guidance as NRP before notification with some policy relief for activities that require consent under the operative provisions.
S245 Tama Potaka, Minister of Conservation	S245.014	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Amend	Supports the intent of the policy but it needs to be consistent with NZCPS Policy 23.	Amend Policies to be consistent with NZCPS Policy 23
S247 Carrus Corporation Ltd	S247.011	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Opposes use of the term "avoid". Opposes the requirement to seek two separate plan changes if land is to be rezoned.	Request policy is deleted. Policy WH.P16: Stormwater discharges from new unplanned greenfield development Avoid all new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network.
S248 Ara Poutama Aotearoa the Department of Corrections	S248.024	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Considers the definition of unplanned greenfield development is too broad and uncertain. Unclear if all development is prohibited or just specific kinds of urban development. Concerns the approach could prohibit works on prison assets or areas that are already effectively developed but are located within areas identified as "unplanned greenfield development areas", where such works are considered to be "greenfield development.	Delete policy

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>Questions the efficiency and practicability of the proposed approach which creates jurisdictional overlap between territorial authorities, the regional council, and the Minister of Conservation on the management of development in "unplanned greenfield development areas". Noting decisions on separate plan changes must be made separately and considers this will be highly inefficient for applicants and submitters and applicants and risks inconsistency.</p> <p>Considers the appropriate means of providing for a combined regulatory approach is through a combined planning document to address the issue, as per section 80 of the RMA. If the relief sought by submitter on definition of "unplanned greenfield development" is granted in full, submitter would consider adopting a neutral position on rule.</p>	
S251 Peka Peka Farm Limited	S251.007	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	<p>Opposes approach towards unplanned greenfield development. Considers approach is inconsistent with the NPS-UD, and in particular Objectives 2 and 6(c), and Policies 1(d) and 8.</p> <p>Considers the proposed prohibited activity status has been inadequately assessed in the section 32 evaluation. Considers a plan change to both a district and regional plan will impose significant costs and is inconsistent with the requirement to be responsive to proposals that would provide for significant development capacity, and support the competitive operation of land and development markets.</p>	<p>Delete the policy: Policy WH.P16: Stormwater discharges from new unplanned greenfield development Avoid all new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S252 Thames Pacific	S252.011	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Opposes use of the term "avoid". Opposes the requirement to seek two separate plan changes if land is to be rezoned.	Request policy is deleted. Policy WH.P16: Stormwater discharges from new unplanned greenfield development. Avoid all new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network.
S255 Woodridge Holdings Ltd	S255.030	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Notes this policy is implemented through a new rule that would make landowners unable to apply for a resource consent as such an activity is proposed to be prohibited which they consider effectively ring-fences the City. Considers it unlikely that GWRC would support a plan change application and this approach flies in the face of the local authorities' responsibility to provide for their own growth, and is a back-door way of achieving a very specific and unreasonable stormwater management approach.	Delete policy
S256 Waste Management NZ Limited	S256.011	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Considers the definition of 'unplanned greenfield development' is ambiguous. Considers avoiding all stormwater discharges is not practicable with stormwater discharges still likely in higher intensity rainfall events. Considers the policy may have the consequence of restricting or preventing individual land use developments in the rural zone.	Amend Policy WH.P16 as follows: Avoid-Minimise all new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network. Any other relief or consequential amendments necessary to address the concerns set out in this submission.
S257 Kāinga Ora	S257.021	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Opposes this policy and the Prohibited Rule framework and considers policy is too narrow since it does not provide any pathway or guidance other than avoidance and the proposed prohibited activity framework is overly onerous. Acknowledges that discharges from new urban areas generally increase the contaminant load within an undeveloped	Delete the policy Alternatively, amend the proposed policy to provide a pathway where the effects from additional stormwater discharges can be managed appropriately. This alternative framework could also incorporate a set of criteria for out of sequence development, which is in line with the direction of the NPS-UD. Any consequential changes or alternative relief required to achieve the intended outcomes sought

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
				<p>area but it is too far to automatically conclude that this would impede achievement of the target attribute state. Considers the activity status fails to recognise that greenfield development can provide a range of opportunities to more effectively undertake catchment-based stormwater management and enhance the environment, particularly those that are already in a degraded state.</p> <p>Noting the RMA is an effects-based framework, considers it unclear why new stormwater discharge from unplanned greenfield development is treated differently from stormwater discharge from planned development.</p> <p>Considers the s32 analysis contains inadequate justification of this framework and that the proposed framework is at odds with the NPS-UD - which requires responsiveness to urban development.</p>	<p>within this submission.</p> <p>Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.</p>
S260 Cannon Point Development Limited (Ltd.)	S260.006	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	<p>Concerned the requirement to 'avoid' all new stormwater discharges from unplanned greenfield development leads directly to prohibited activity rule WH.R13. Considers there is no directive in the objectives that justifies the policy taking an avoidance approach and considers it will foreclose any opportunity to manage effects to achieve Target Attribute States and coastal water objectives.</p> <p>Considers an effects-management approach would better allow for the competing directives of the NPS-FW and NPS-UD to be resolved.</p>	<p>Delete policy WH.P16.</p> <p>Or, if this is not accepted, amend it to be consistent with implementing the objectives which requires an effects management approach.</p>
S261 Forest & Bird	S261.077	Policy WH.P16: Stormwater	Support	<p>Considers the policy direction reflects the NZCPS and NPSFM.</p>	<p>Retain as notified.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
		discharges from new unplanned greenfield development.			
S286 Taranaki Whānui	S286.047	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	<p>Concerned policy and provisions will impose significant costs and impact the ability of Taranaki Whānui whanau to develop their ancestral lands. Notes land not yet returned to Māori ownership through treaty settlements, includes many sites in areas mapped as "unplanned greenfield land" including rural and open space land.</p> <p>Considers prohibition on developing these lands inconsistent with principles of Te Tiriti and inconsistent with need to provide for broader housing affordability and innovation on both Māori and all other land.</p> <p>Considers planning processes need to be flexible to ensure aspirational outcomes are achieved.</p> <p>Seeks freshwater effects of development of these sites are addressed through a regional consent process rather than a regional plan change.</p> <p>Considers policy a duplicate of WH.P2(a) and unnecessary.</p>	<p>Delete policy: Policy WH.P16: Stormwater discharges from new unplanned greenfield development. Avoid all new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network.</p>
S33 Wellington City Council	S33.049	Policy WH.P17: General wastewater policy to achieve target attribute states and coastal objectives.	Amend	Support the management of wastewater to maintain or improve the baseline water quality state for Escherichia coli provided the targeted attribute timeframe is amended as proposed.	Retain as notified provided the targeted attribute timeframe is amended as proposed.
S116 Taumata Arowai	S116.040	Policy WH.P17: General	Amend	Notes policies and rules that establish requirements for wastewater and stormwater networks provide clarity to	Provisions that interface with complementary Taumata Arowai duties and powers are well aligned, efficient and effective, and unnecessary duplication is avoided.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

		and coastal objectives.			
S257 Kāinga Ora	S257.022	Policy WH.P17: General wastewater policy to achieve target attribute states and coastal objectives.	Amend	Generally supports but would support an extended timeline for the achievement of meeting the TAS.	Amend to reflect an extended timeline for the achievement of TAS which takes into consideration the feasibility and cost of achieving the prescribed timeframes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S261 Forest & Bird	S261.078	Policy WH.P17: General wastewater policy to achieve target attribute states and coastal objectives.	Support	Considers the policy direction reflects the NPSFM.	Retain but changes to timeframe may be required to ensure there and interim timeframes consistent with NPSFM direction in s3.11. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S286 Taranaki Whānui	S286.048	Policy WH.P17: General wastewater policy to achieve target attribute states and coastal objectives.	Amend	Supports full restoration of Te-Whanganui-a-Tara's waterways towards wai ora by 2040 but notes significant infrastructure investment is required by 2040 to meet the E.coli target. Submitter is concerned this target will not be achievable with current funding mechanisms. Considers it should be a priority to find new streams of funding that are not reliant on the existing ratepayer base and regular monitoring and reporting on progress towards the target is completed.	Retain policy provided: -Method M45 is implemented as a priority and new infrastructure funding mechanisms are put in place; and -regular monitoring and reporting is undertaken on progress towards the target.
S33 Wellington City Council	S33.050	Policy WH.P18: Progressing works to meet Escherichia coli target attribute states.	Amend	Support the management of wastewater to maintain or improve the baseline water quality state for Escherichia coli.	Retain as notified provided the targeted attribute timeframe is amended as proposed.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Chapter, Provision

Submitter	Submission Point	Provision	Stance	Reasons	Decision Requested
S116 Taumata Arowai	S116.041	Policy WH.P18: Progressing works to meet Escherichia coli target attribute states.	Amend	Notes policies and rules that establish requirements for wastewater and stormwater networks provide clarity to network operators and will have a bearing on the quality and quantity of contaminant discharge. Considers that complementary provisions between the RMA, WSA and WSEA are well aligned, efficient, effective, and duplication is avoided where possible. Suggests a solution may be signalling the relationship between the different legislative requirements and how a single product (e.g. a stormwater management strategy) might be developed, reviewed and implemented, to meet both.	Provisions that interface with complementary Taumata Arowai duties and powers are well aligned, efficient and effective, and unnecessary duplication is avoided.
S151 Wellington Water Ltd	S151.086	Policy WH.P18: Progressing works to meet Escherichia coli target attribute states.	Oppose	Considers the purpose of policy is unclear and it implies that wastewater networks are the only source of e coli. Refers to comments on prioritisation in Section A of submission.	Delete Policy Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S183 Yvonne Weeber	S183.208	Policy WH.P18: Progressing works to meet Escherichia coli target attribute states.	Support	Not stated	Not stated
S186 Guardians of the Bays Inc	S186.118	Policy WH.P18: Progressing works to meet Escherichia coli target attribute states.	Support	Not stated	Not stated
S188 Wellington Fish and Game	S188.053	Policy WH.P18: Progressing works to meet	Support	Considers timeline requires interim timeframe targets set and monitored to achieve 2040 deadline	Include interim target attribute states set for intervals of not more than 10 years.
